PENNSYLVANIA MEDICINE (ISSN 0031-4595) is published monthly by the Pennsylvania Medical Society, 777 East Park Drive, Harrisburg, PA 17111.

SUBSCRIPTIONS: \$25 per year—United States and Canada; \$35—all others. Single issues \$3.50 per copy prepaid; special issues cost more.

POSTMASTER: Send address changes to PENNSYLVANIA MEDICINE, 777 East Park Drive, PO Box 8820, Harrisburg, PA 17105-8820. Second class postage paid at Harrisburg, PA 17105, and at additional mailing offices.

“Promises.

Every company makes them. Few keep them. Pennsylvania physicians

are lucky to have a resource like PMSLIC.

I know. Early in my career I practiced in the Midwest. I saw colleagues get burned by a company promising the same medical liability protection for less money. I was pretty young, but luckily I didn't go with them. Unfortunately, my best friend, Phil, did. When his carrier went under, it looked as though a lot of good people would go down with it. Phil just got out by the skin of his

teeth. A couple of our friends weren't so lucky. When I came to Pennsylvania, I checked out all my options. Know what? No company can match PMSLIC's record, or offer the same value-added services. Through the years, we've all heard many new carriers guarantee us big savings. But I can't see the value of saving a few dollars in the short run, if it means risking my future. Hey, if you don't believe me, give Phil a call. ”

BLUE SHIELD SEEKING REFUNDS OF MEDICARE OVERPAYMENTS:

Pennsylvania Blue Shield-Medicare advised the State Society at press time that on January 9, 1995, it would mail a refund request letter to 241 Pennsylvania providers regarding an overpayment the carrier made last year. According to Blue Shield, the overpayment was the result of a systems problem beginning January 3, 1994, and ending January 6, 1994. The problem caused Medicare to reimburse diagnostic services at a "total component" level rather than at the "professional component" level. Blue Shield says the affected providers failed to bill for the service properly because they excluded the "26" modifier on the billed service. The Society is reviewing the overpayment request and will take action as appropriate. Physicians who provided a "total component" service should appeal any refund request; note that, generally, total component can only be billed by a physician if the place of service is the office, not inpatient or outpatient.

WORKERS' COMP RATES UP 3.2 PERCENT: Physicians who perform services under the state's new Workers' Compensation Act should pay close attention to payments from insurers: Services performed on or after January 1 are to be paid at a 3.2 percent increase over the 113 percent of the 1994 Medicare allowance. The act froze payments at the 113 percentage, but, after active lobbying by the State Society, also requires annual updates based on statewide average weekly wage statistics to be applied cumulatively thereafter. The calculations of the freeze were as of December 31, 1994; therefore 1995 Medicare allowances do not apply. Insurers who have not recognized the higher allowance should be reported to the Bureau of Workers' Compensation through a Petition for Fee Review. In related news, regulations implementing Pennsylvania's new workers' comp law will move back to the General Assembly this month. The Independent Regulatory Review Commission (IRRC) rejected the regulations in late November; its suggested revisions were not addressed by the state in time for IRRC to re-review and process the regs.

MIDDLE COURT ORDERS PAYMENTS TO PHYSICIANS: In the case of *State Society v. Snider*, the Middle District Court has directed the state Department of Public Welfare (DPW) to reimburse physicians who provide medical services to qualified Medicare beneficiaries for copayments and deductibles under the Medicaid program. As a result, DPW will soon issue checks to physicians for retroactive payments for claims processed on or after September 26, 1994. The order, which has rendered null and void portions of Pennsylvania's Medicaid plan, requires interest to accrue on supplemental payments not paid by December 30, 1994, at a rate of 5.69 percent. Direct questions about the decision to the Society's Department of Medical Economics at (800) 228-7823.

CLAIMS BOARD RULES THAT DPW BREACHED PHILADELPHIA CONTRACT:

The State Board of Claims has ruled that the Pennsylvania Department of Public Welfare breached its contract with physicians and others who said they were never paid for services provided to low-income Philadelphia-area residents under the HealthPass program. Services were provided between 1986 and 1989. The board's decision could force payment of about \$31 million, the *Philadelphia Inquirer* reported, with about \$1.7 million owed to physicians. However, a portion may be offset by \$23 million in fees already paid by the state to Pennsylvania hospitals.

JCAHO RELEASES HOSPITAL PERFORMANCE REPORTS: The Joint Commission on Accreditation of Healthcare Organizations (JCAHO) has begun to release to the public performance reports for hospitals surveyed since January 1, 1994. Included in the reports are an overall evaluation, national comparisons, and areas for improvement; outcomes data will not be added for several years. The release of the reports comes amidst criticism from the American Medical Association and the American Hospital Association about the commission's survey process and lack of responsiveness. Reports are \$30 each and available from JCAHO's customer service center at (708) 916-5800.

Keep A Watchful Eye in '95

John W. Mills, MD
Medical Editor

Twelfth Night will be dimming rapidly in our memory as you read this January offering. But recall, for just a moment, those familiar words from a children's Christmas song, "...better watch out, better not cry, I'm telling you why, Santa Claus is coming to town...." Heed those words, for warnings have been sounded that the "Feds" are coming to town, and our profession had better be vigilant.

The HHS Inspector General's office has had an unprecedented number of successful prosecutions pursuing health fraud and abuse, including 1,265 providers cut from Medicare and Medicaid, plus fraud control units funded in 43 states. A total of \$37 million has been recovered from Medicare providers.

In addition, the Justice Department has had a 67 percent increase in prosecutions and will add 150 additional FBI agents on health fraud and 120 specially trained federal prosecutors. Civil and criminal recoveries topped \$530 million in 1993—statistics courtesy of *AMNews*.

Prior to last fall's election, it was predicted that Congress would expand fraud enforcement regardless of any health system reform action. With the GOP landslide, it's a bit uncertain how aggressive Congress will be in such action. There is always the issue of stemming the money lost to fraud and abuse in those huge federal programs—Medicare and Medicaid. So despite the political party changes, it would appear that providers must be very careful and scrupulously honest in their billings to those federal programs. Obviously, physicians are not the only providers being monitored. But whether we like to admit it or not, some members of our profession have been indicted and convicted of fraud and abuse in those programs.

Another area that bears watching is the whole antitrust issue. We have been given guidelines by the Justice Department, but as is the case with so many legal issues, there are innumerable gray areas. Answers can involve lengthy and costly court

battles, which seem to benefit only the attorneys.

Expert legal advice on antitrust issues in medical practice is available and costly, but I venture to say it's much less expensive in time, dollars, and stress than a long court proceeding.

A third area where physicians must keep a weather eye concerns the self-referral bans issued under Stark I and II. Fortunately, Stark III was not passed by the 103rd Congress, but you can look for it to be reintroduced by its namesake, Representative Fortney (Pete) Stark (D-CA), this year.

The real problem with Stark I and II stems from the fact that final regulations for Stark I were approved by Congress in 1989 and were due for release in 1993, but they are still pending. Regulations for Stark II are nowhere in sight, yet the Health Care Financing Administration will begin tracking, via survey, the 11 designated services* in which ownership interests by doctors must be reported, and such reporting has been expanded to include compensation and investment agreement.

We all expect health system reform to be on the agenda again, and frankly, most of us, I believe, would welcome insurance reform, tort reform, portability of health care benefits, and antitrust relief. Listen to your patients with their horrendous insurance problems, which are not really any better under the new HMO-managed care networks; recall your everyday hassles with the bureaucracy of the Department of Public Welfare and their multitudinous "edits" and publications referring to other department publications. It seems that one needs a librarian on staff just to keep track of all the rules, regulations, and changes.

Let us hope our new governor and the GOP mandate can turn things around locally, as well as on the national level. We would hope for wise counsel from the AMA and the State Society to our newly elected political leaders.

In the meantime, keep a watchful eye. ○

* Note: The 11 services HCFA will begin tracking include: clinical laboratory services; physical therapy services; occupational therapy services; radiology services, including MRI, CT scans, and ultrasound services; radiation therapy services; durable medical equipment; parenteral and enteral nutrients, equipment, and supplies; prosthetics, orthotics, and prosthetic devices; home health services; outpatient prescription drugs; and inpatient and outpatient hospital services.

**WHEREVER WE SHOW UP,
RATES GO DOWN.**

The P-I-E Mutual has now entered the state of Pennsylvania. And whenever we come into a state good sense comes along, nonsense exits. Stability returns to the medical liability insurance market. In nine states 18,000 of our member-insured doctors have been enjoying the new cost climate. Protected by one of the largest medical professional liability monoline insurance companies in America. And defended by a firm of medically savvy litigators who close almost 80% of cases without payment. And, year in and out, win 90% of cases that go to trial. For information, call 1-800-228-2335.

What You Get for Your Dues

John H. Hobart, MD

Here is an invaluable tip for any physician who has the intestinal fortitude to stand in front of a group of born-and-educated-to-be-independent physicians and talk about, of all things, the virtues of organized medicine.

Regardless of what is happening in the state legislature, or the state health or welfare departments, or down the road at HCFA, or farther down the road in Washington, you are certain at some point to be asked a certain question: "What has organized medicine done for me?" Or, you might get a variation on the theme. Something like, "What do I get for my dues?"

I might venture to say it's quickly becoming the most frequently asked question I am called upon to answer as president. And my answer as president is the same as it was when I was—as I will be again in the future—simply a member of the Pennsylvania Medical Society.

When you join and support organized medicine, you get to be part of something that is our best chance of protecting the physician's role—your role—in the practice of medicine.

What do we really want to protect? Our profession embraces so many themes and variations that the answers could run to pages. I will confine myself here to "the short list" of reasons that I find myself turning to time and again as I attempt to respond to the colleagues—members and nonmembers—whom it has been my privilege to address.

First, I would say, we want to protect our ability to work with our patients to choose the tests, schedule the procedures, and prescribe the medications that have the best chance of helping them to stay well, to get better, or to function as well as possible with a chronic condition. This is medical decision-making, and where else

does it belong but in the room where physician and patient are working together on the patient's behalf?

Second, we want to protect our right to set professional and ethical standards, to identify and solve professional problems, and to practice in an environment of opportunity and freedom of choice. This is what any profession wants. Indeed, these are among the hallmarks of a profession. And physicians have certainly earned their professional stripes the hard way—over many decades in the history of the commonwealth and this country.

Perhaps most importantly, we want to protect our role in the democratic process. We want to be able to provide good, credible information about our health care

delivery system, and to gain the fair attention of the public and our legislators. We want to bring our experience and judgment to the table, where we can sit with other legitimate interests to help our lawmakers create laws, and our administrative officials write and enforce regulations, that will strengthen, improve, and broaden our health care system—not shrink, diminish, or weaken it.

Lastly, we must never allow ourselves or others to equate the verb "protect" with the desire to oppose all change, to stonewall to the

bitter end. To suggest that all change is bad is ridiculous; no system, not even the postal service, is perfect. But change for its own sake alone is without merit. As I tried to suggest above, we have many virtues in our present health care system, most of which are vital to the quality of care.

These goals will not be accomplished by one or two. They will not be accomplished by one or two hundred. They require the unified and sustained effort of many thousands. All will benefit. All should contribute. ☐

"Perhaps most importantly, we want to protect our role in the democratic process."

Statement of Accreditation: Hahnemann University is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to sponsor continuing medical education programs for physicians. Hahnemann University designates each hour of attendance at these activities as 1 credit hour of Category 1 of the Physician's Recognition Award of the American Medical Association.

BAD NEWS AND VERY BAD NEWS

Any sane person is shocked, saddened, depressed, and angry with the news from Union, South Carolina, about two young brothers intentionally drowned while secured in their car seats as the car was pushed into a lake by their "mother." This unbelievable and unthinkable act committed by this woman was reported multiple times in detail by the media. Americans are horrified by this news. To think that a woman in our country can think of this act as a solution to a problem is impossible to understand. But, yet, it is not unusual to hear or read reports of terrible criminal acts. Mass murder in a McDonald's, a post office, or on a train with an automatic weapon seems to be on the increase. Sure, some of the awareness of these awful crimes is due to our amazing communication via worldwide networks. Earthquakes, robberies, murders, and political activities are all reported moments after they happen. Bad news is a way of life for us.

Unfortunately, there is very bad news. The South Carolina incident occurs in some form every day but doesn't make the headlines. Ask any staff member of a hospital emergency room. Some urban children's hospitals have specially trained staff to deal with child abuse; it is *that* prevalent. What's the difference between the Union, South Carolina, incident and a baby being drowned or near-drowned in a bath tub? How about the shaken impact syndrome? Is drowning in a car any worse? What about the cigarette burns, hot water burns, and belt marks on infants? They all don't make headlines. The South Carolina murders are selected to be reported and followed for reasons known only to the media. The sad truth is that they are only two cases of the approximately 4,000 deaths per year in the U.S. from child abuse. There were 91 infant deaths in 1991 in the U.S. from AIDS and 380 infant homicides. Is murdering children an epidemic in our country? I think so.

Let's wash all of this down with hypocrisy. An adolescent who spray painted cars in Singapore was sentenced to be struck four times with a cane. The U.S. was in an uproar. President Clinton tried to

have the sentence modified or removed. The media interviewed anyone who knew anything about the situation day after day. All of this over a healthy adolescent fellow receiving four strikes with a cane. Where are our political leaders and the media when the dead four-month-old is brought into an emergency room with subdural hematomas, cigarette burns, belt marks, and emaciation? Let's have some outrage left for this baby.

We are frustrated and fed up with crime in America. Is the problem of maiming and murdering our children so prevalent that we have become tolerant or desensitized? Punishment of those responsible is just, but not the solution. Prevention is the only acceptable course of action. Prevention. This problem of murdering children is a legitimate concern for the federal government to address. Congress should be involved in a serious, comprehensive bill with the goal of eliminating from our society the abuse and killing of children. How could such a bill not receive bipartisan support? Physicians must show their human feelings and that caring for one another still exists. We cherish children. As a civilized society, we must make it clear to those in authority that harming children will not be tolerated. It must stop now.

The Pennsylvania Medical Society can demonstrate leadership by initiating action that will end the killing. It can do something significant for the children of the state and the nation. We hear something about the unborn every day. The time has come to focus on the lives of the born. Working with our national representatives and senators to introduce a bill that addresses this issue with support from the AMA is a good place to start. As physicians, we can't ignore this any longer.

Joseph A. C. Girone, MD
Philadelphia

Response: Dr. Girone has spotlighted a very poignant issue—child abuse. Prevention is the key to this problem; however, it is multifaceted. Legislative efforts have failed, as yet, to stem the tide. What we are facing is a breakdown in our society due to underlying socioeconomic problems, substance abuse, and, in a broader sense, a lack of spiritual morality and ethics. That's difficult to legislate. The State Society supports the AMA efforts on violence and has gone on record to that end. In a related effort, the Society's Educational and Scientific Trust continues its work with the Department of Aging on elder abuse and related issues.

SEND US A FAX FULL

It's a new year, and your State Society is going in many new directions, described throughout this issue of PENNSYLVANIA MEDICINE. Help steer our direction: Give us your sharpest incites, most helpful anecdotes—and even your most scathing complaints. Jot a few thoughts below, and FAX them to us at (717) 558-7840. Please type comments or write legibly—we'll do our best to read it! Letters are published at the discretion of the editors and are subject to editing.

Dear Editor: _____

Name/Title _____

Practice Location _____

OR, mail your letters to: Managing Editor, PENNSYLVANIA MEDICINE, P.O. Box 8820, Harrisburg, PA 17105-8820

If you're looking for the right group practice coverage, why not ask the people who wrote the book on it?

When they needed to know about insuring you and your group practice, the Pennsylvania Medical Society didn't just want us to act as a guide.

They asked us to write it.

We're Colburn-Bertholon-Rowland (CBR). The endorsed broker for the Pennsylvania Medical Society. And while "A Physician's Guide to Purchasing Professional and Personal Insurance" isn't the catchiest title, if you're up against the complex issues of insuring a group practice,

you'll want it on your bookshelf. It deals with everything from life insurance to disability coverage to professional liability insurance. Oh, and health coverage. Homeowner's insurance. Even long-term care. And there's a lot more to it.

And with CBR, there's a lot behind it. We've spent the last 65 years giving doctors our

expertise on all forms of insurance and group benefits.

When it comes to individual and group practice insurance, we're the people to call on.

COLBURN-BERTHOLON-ROWLAND
INSURANCE SERVICES

If this sounds like the kind of help you can use, call us at 800-551-4504 (Media) or 800-327-1550 (Pittsburgh). Your CBR rep will do more than give you a hand. The first time you meet you'll receive our book – a \$30 value – free. And if you want more answers, just ask.

Physicians Should Control PHOs

Herbert C. Perlman, MD

Now that managed care, with the resultant competition among physicians, has become more prevalent in Pennsylvania, a greater number of attempts are being made to organize physicians. Fortunately, there may be physician-owned health maintenance organizations (HMOs) in the future for many of us. Also, many physician organizations (POs) and physician-hospital organizations (PHOs) now exist.

It has been my personal experience that a PHO can be a very effective organization if it is physician controlled. It helps if physicians have a close working relationship with the hospital. A PHO is a good form of organization in locations like Carlisle, with one hospital. In this situation, physicians can be fairly sure that the hospital will not go out of business, leaving them without bargaining power.

In Carlisle, 10 years ago, we organized a delivery system known as Carlisle Health Care Alternatives or CHCA. The delivery system has interacted with HMOs and preferred provider organizations (PPOs) of insurance companies, such as Keystone Health Plan, HealthAmerica, Aetna, and U.S. Healthcare. Our board consists of nine individuals, six of whom are mem-

bers of a physician corporation, which includes most of the doctors of Carlisle. The other three board members are from the hospital board.

In this way, the CHCA board has been dominated by physicians. However, there has been no necessity to exert that dominance, since all votes for the last 10 years, with the exception of a recent one, have been unanimous. Additionally, the physician CHCA board members are mostly primary care physicians, by a ratio of 2 to 1.

The leverage that our PHO exerts consists of the contracting mechanism. In Carlisle, contracts are not signed between the HMOs and individual physicians. The individual physician signs a contract with CHCA, which then signs a contract with the HMO. Periodically, CHCA will cancel the contract to renegotiate various portions. At no time, however, has CHCA negotiated fees—as such fees are a matter of individual negotiations between the hospital, the physicians, and the insurance companies.

Using this method, the physicians in town have been able to safeguard their practices from possible dominance by the hospital. It must be emphasized that the prime ingredient is the ability to work to-

gether for the common good. Specialists and primary care physicians function as a unit, with a minimum of professional jealousy.

At this particular time in Pennsylvania, physicians are powerful relative to hospitals because we still have control of the treatment of patients. Setting up physician-dominated structural organizations can allow us even more control. ◊

“...the prime ingredient is the ability to work together for the common good.”

Dr. Perlman, a diagnostic radiologist from Carlisle, is the State Society's Fifth District trustee.

VOLTAREN®
diclofenac sodium
Delayed-Release (enteric-coated) Tablets

CATAFLAM®
diclofenac potassium
Immediate-Release Tablets

Brief Summary (For full Prescribing Information, see Package Insert.)

INDICATIONS AND USAGE

Voltaren Delayed-Release or Cataflam Immediate-Release Tablets are indicated for the acute and chronic treatment of signs and symptoms of rheumatoid arthritis, osteoarthritis, and ankylosing spondylitis. Only Cataflam is indicated for the management of pain and primary dysmenorrhea, when prompt pain relief is desired, because it is formulated to provide earlier plasma concentrations of diclofenac (see CLINICAL PHARMACOLOGY, Pharmacokinetics and Clinical Studies).

CONTRAINDICATIONS

Diclofenac in either formulation, Voltaren or Cataflam, is contraindicated in patients with hypersensitivity to diclofenac. Diclofenac should not be given to patients who have experienced asthma, urticaria, or other allergic-type reactions after taking aspirin or other NSAIDs. Severe, rarely fatal, anaphylactoid reactions to diclofenac have been reported in such patients.

WARNINGS

Gastrointestinal Effects

Peptic ulceration and gastrointestinal bleeding have been reported in patients receiving diclofenac. Physicians and patients should therefore remain alert for ulceration and bleeding in patients treated chronically with diclofenac even in the absence of previous GI tract symptoms. It is recommended that patients be maintained on the lowest dose of diclofenac possible, consistent with achieving a satisfactory therapeutic response.

Risk of GI Ulcerations, Bleeding, and Perforation with NSAID Therapy: Serious gastrointestinal toxicity such as bleeding, ulceration, and perforation can occur at any time, with or without warning symptoms, in patients treated chronically with NSAID therapy. Although minor upper gastrointestinal problems, such as dyspepsia, are common, usually developing early in therapy, physicians should remain alert for ulceration and bleeding in patients treated chronically with NSAIDs even in the absence of previous GI tract symptoms. In patients observed in clinical trials of several months to 2 years' duration, symptomatic upper GI ulcers, gross bleeding, or perforation appear to occur in approximately 1% of patients for 3-6 months, and in not less than 2%-4% of patients treated for 1 year. Physicians should inform patients about the signs and/or symptoms of serious GI toxicity and what steps to take if they occur.

Studies to date have not identified any subset of patients not at risk of developing peptic ulceration and bleeding. Except for a prior history of serious GI events and other risk factors known to be associated with peptic ulcer disease, such as alcoholism, smoking, etc., no risk factors (e.g., age, sex) have been associated with increased risk. Elderly or debilitated patients seem to tolerate ulceration or bleeding less well than other individuals, and most spontaneous reports of fatal GI events are in this population. Studies to date are inconclusive concerning the relative risk of various NSAIDs in causing such reactions. High doses of any NSAID probably carry a greater risk of these reactions, although controlled clinical trials showing this do not exist in most cases. In considering the use of relatively large doses (within the recommended dosage range), sufficient benefit should be anticipated to offset the potential increased risk of GI toxicity.

Hepatic Effects

As with other NSAIDs, elevations of one or more liver tests may occur during diclofenac therapy. These laboratory abnormalities may progress, may remain unchanged, or may be transient with continued therapy. Borderline elevations (i.e., less than 3 times the ULN [=the Upper Limit of the Normal range]), or greater elevations of transaminases occurred in about 15% of diclofenac-treated patients. Of the hepatic enzymes, ALT (SGPT) is the one recommended for the monitoring of liver injury.

In clinical trials, meaningful elevations (i.e., more than 3 times the ULN) of AST (SGOT) (ALT was not measured in all studies) occurred in about 2% of approximately 5700 patients at some time during Voltaren treatment. In a large, open, controlled trial, meaningful elevations of ALT and/or AST occurred in about 4% of 3700 patients treated for 2-6 months, including marked elevations (i.e., more than 8 times the ULN) in about 1% of the 3700 patients. In that open-label study, a higher incidence of borderline (less than 3 times the ULN, moderate (3-8 times the ULN), and marked (>8 times the ULN) elevations of ALT or AST was observed in patients receiving diclofenac when compared to other NSAIDs. Transaminase elevations were seen more frequently in patients with osteoarthritis than in those with rheumatoid arthritis (see ADVERSE REACTIONS).

In addition to the enzyme elevations seen in clinical trials, rare cases of severe hepatic reactions, including jaundice and fatal fulminant hepatitis, have been reported.

Physicians should measure transaminases periodically in patients receiving long-term therapy with diclofenac, because severe hepatotoxicity may develop without a prodrome of distinguishing symptoms. The optimum times for making the first and subsequent transaminase measurements are not known. In the largest U.S. trial (open-label) that involved 3700 patients monitored first at 6 weeks and 1200 patients monitored again at 24 weeks, almost all meaningful elevations in transaminases were detected before patients became symptomatic. In 42 of the 51 patients in all trials who developed marked transaminase elevations, abnormal tests occurred during the first 2 months of therapy with diclofenac. Based on this experience, if diclofenac is used chronically, the first transaminase measurement should be made no later than 8 weeks after the start of diclofenac treatment. As with other NSAIDs, if abnormal liver tests persist or worsen, if clinical signs and/or symptoms consistent with liver disease develop, or if systemic manifestations occur (e.g., eosinophilia, rash, etc.), diclofenac should be discontinued.

To minimize the possibility that hepatic injury will become severe between transaminase measurements, physicians should inform patients of the warning signs and symptoms of hepatotoxicity (e.g., nausea, fatigue, lethargy, pruritus, jaundice, right upper quadrant tenderness, and "flu-like" symptoms), and the appropriate action patients should take if these signs and symptoms appear.

PRECAUTIONS

General

Allergic Reactions: As with other NSAIDs, allergic reactions including anaphylaxis have been reported with diclofenac. Specific allergic manifestations consisting of swelling of eyelids, lips, pharynx, and larynx; urticaria; asthma; and bronchospasm, sometimes with a concomitant fall in blood pressure (severe asthmas) have been observed in clinical trials and/or the marketing experience with diclofenac. Anaphylaxis has rarely been reported from foreign sources; in U.S. clinical trials with diclofenac in over 6000 patients, 1 case of anaphylaxis was reported. In controlled clinical trials, allergic reactions have been observed at an incidence of 0.5%. These reactions can occur without prior exposure to the drug.

Fluid Retention and Edema: Fluid retention and edema have been observed in some patients taking diclofenac. Therefore, as with other NSAIDs, diclofenac should be used with caution in patients with a history of cardiac decompensation, hypertension, or other conditions predisposing to fluid retention.

Renal Effects: As a class, NSAIDs have been associated with renal papillary necrosis and other abnormal renal pathology in long-term administration to animals. In oral diclofenac studies in animals, some evidence of renal toxicity was noted. Isolated incidents of papillary necrosis were observed in a few animals at high doses (20-120 mg/kg) in several baboon subacute studies. In patients treated with diclofenac, rare cases of interstitial nephritis and papillary necrosis have been reported (see ADVERSE REACTIONS).

A second form of renal toxicity, generally associated with NSAIDs, is seen in patients with conditions leading to a reduction in renal blood flow or blood volume, where renal prostaglandins have a supportive role in the maintenance of renal perfusion. In these patients, administration of an NSAID results in a dose-dependent decrease in prostaglandin synthesis and, secondarily, in a reduction of renal blood flow, which may precipitate overt renal failure. Patients at greatest risk of this reaction are those with impaired renal function, heart failure, liver dysfunction, those taking diuretics, and the elderly. Discontinuation of NSAID therapy is typically followed by recovery to the pretreatment state.

Cases of significant renal failure in patients receiving diclofenac have been reported from marketing experience, but were not observed in over 4000 patients in clinical trials during which serum creatinine and BUN values were followed serially. There were only 11 patients (0.3%) whose serum creatinine and concurrent serum BUN values were greater than 2.0 mg/dL and 40 mg/dL, respectively, while on diclofenac (mean rise in the 11 patients creatinine 2.3 mg/dL and BUN 26.4 mg/dL).

Since diclofenac metabolites are eliminated primarily by the kidneys, patients with significantly impaired renal function should be more closely monitored than subjects with normal renal function.

Porphyria: The use of diclofenac in patients with hepatic porphyria should be avoided. To date, 1 patient has been described in whom diclofenac probably triggered a clinical attack of porphyria. The postulated mechanism, demonstrated in rats, for causing such attacks by diclofenac, as well as some other NSAIDs, is through stimulation of the porphyrin precursor delta-aminolevulinic acid (ALA).

Information for Patients

Diclofenac, like other drugs of its class, is not free of side effects. The side effects of these drugs can cause discomfort and, rarely, there are more serious side effects, such as gastrointestinal bleeding, and more rarely, liver toxicity (see WARNINGS, Hepatic Effects), which may result in hospitalization and even fatal outcomes.

NSAIDs are often essential agents in the management of arthritis and have a major role in the management of pain, but they also may be commonly employed for conditions that are less serious.

Physicians may wish to discuss with their patients the potential risks (see WARNINGS, PRECAUTIONS, and ADVERSE REACTIONS) and likely benefits of NSAID treatment, particularly when the drugs are used for less serious conditions where treatment without NSAIDs may represent an acceptable alternative to both the patient and physician.

Laboratory Tests

Because serious GI tract ulceration and bleeding can occur without warning symptoms, physicians should follow chronically treated patients for the signs and symptoms of ulceration and bleeding and should inform them of the importance of this follow-up (see WARNINGS, Risk of GI Ulcerations, Bleeding, and Perforation with NSAID Therapy). If diclofenac is used chronically, patients should also be instructed to report any signs and symptoms that might be due to hepatotoxicity of diclofenac; these symptoms may become evident between visits when periodic liver laboratory tests are performed (see WARNINGS, Hepatic Effects).

Drug Interactions

Aspirin: Concomitant administration of diclofenac and aspirin is not recommended because diclofenac is displaced from its binding sites during the concomitant administration of aspirin, resulting in lower plasma concentrations, peak plasma levels, and AUC values.

Anticoagulants: While studies have not shown diclofenac to interact with anticoagulants of the warfarin type, caution should be exercised, nonetheless, since interactions have been seen with other NSAIDs. Because prostaglandins play an important role in hemostasis, and NSAIDs affect platelet function as well, concurrent therapy with NSAIDs, including diclofenac, and warfarin requires close monitoring of patients to be certain that no change in their anticoagulant dosage is required.

Digoxin, Methotrexate, Cyclosporine: Diclofenac, like other NSAIDs, may affect renal prostaglandins and increase the toxicity of certain drugs. Ingestion of diclofenac may increase serum concentrations of digoxin and methotrexate and increase cyclosporine's nephrotoxicity. Patients who begin taking diclofenac or who increase their diclofenac dose or any other NSAID while taking digoxin, methotrexate, or cyclosporine may develop toxicity characteristics for these drugs. They should be observed closely, particularly if renal function is impaired. In the case of digoxin, serum levels should be

monitored.

Lithium: Diclofenac decreases lithium renal clearance and increases lithium plasma levels. In patients taking diclofenac and lithium concomitantly, lithium toxicity may develop.

Oral Hypoglycemics: Diclofenac does not alter glucose metabolism in normal subjects nor does it alter the effects of oral hypoglycemic agents. There are rare reports, however, from marketing experiences of changes in effects of insulin or oral hypoglycemic agents in the presence of diclofenac that necessitated changes in the doses of such agents. Both hypo- and hyperglycemic effects have been reported. A direct causal relationship has not been established, but physicians should consider the possibility that diclofenac may alter a diabetic patient's response to insulin or oral hypoglycemic agents.

Diuretics: Diclofenac and other NSAIDs can inhibit the activity of diuretics. Concomitant treatment with potassium-sparing diuretics may be associated with increased serum potassium levels.

Other Drugs: In small groups of patients (7-10/interaction study), the concomitant administration of azathioprine, gold, chloroquine, D-penicillamine, prednisolone, doxycycline, or digoxin did not significantly affect the peak levels and AUC values of diclofenac.

Protein Binding

In vitro, diclofenac interferes minimally or not at all with the protein binding of salicylic acid (20% decrease in binding), tobutamide, prednisolone (10% decrease in binding), or warfarin. Benzylpenicillin, ampicillin, oxacillin, chlorfetracycline, doxycycline, cephalothin, erythromycin, and sulfamethoxazole have no influence in vitro on the protein binding of diclofenac in human serum.

Drug/Laboratory Test Interactions

Effect on Blood Coagulation: Diclofenac increases platelet aggregation time but does not affect bleeding time, plasma thrombin clotting time, plasma thromboplastin, or factors V and VII to XII. Statistically significant changes in prothrombin and partial thromboplastin times have been reported in normal volunteers. The mean changes were observed to be less than 1 second in both instances, however, and are unlikely to be clinically important. Diclofenac is a prostaglandin synthetase inhibitor, however, and all drugs that inhibit prostaglandin synthesis interfere with platelet function to some degree; therefore, patients who may be adversely affected by such an action should be carefully observed.

Carcinogenesis, Mutagenesis, Impairment of Fertility

Long-term carcinogenicity studies in rats given diclofenac sodium up to 2 mg/kg/day or (12 mg/m²/day approximately the human dose) have revealed no significant carcinogenicity in tumor incidence. There was a slight increase in benign mammary fibroadenomas in mid-dose-treated (0.5 mg/kg/day or 3 mg/m²/day) female rats [high-dose females had excessive mortality], but the increase was not significant for this common rat tumor. A 2-year carcinogenicity study conducted in mice employing diclofenac sodium at doses up to 0.3 mg/kg/day (0.9 mg/m²/day) in males and 1 mg/kg/day (3 mg/m²/day) in females did not reveal any oncogenic potential. Diclofenac sodium did not show mutagenic activity in *in vitro* point mutation assays in mammalian (mouse lymphoma) and microbial (yeast, Ames) test systems and was nonmutagenic in several mammalian *in vitro* and *in vivo* tests, including dominant lethal and male germinal epithelial chromosomal studies in mice, and nucleus anomaly and chromosomal aberration studies in Chinese hamsters. Diclofenac sodium administered to male and female rats at 4 mg/kg/day (24 mg/m²/day) did not affect fertility.

Teratogenic Effects

There are no adequate and well-controlled studies in pregnant women. Diclofenac should be used during pregnancy only if the benefits to the mother justify the potential risk to the fetus.

Pregnancy Category B: Reproduction studies have been performed in mice given diclofenac sodium (up to 20 mg/kg/day or 60 mg/m²/day) and in rats and rabbits given diclofenac sodium (up to 10 mg/kg/day or 60 mg/m²/day for rats, and 80 mg/m²/day for rabbits), and have revealed no evidence of teratogenicity despite the induction of maternal toxicity and fetal toxicity. In rats, maternally toxic doses were associated with dystocia, prolonged gestation, reduced fetal weights and growth, and reduced fetal survival. Diclofenac has been shown to cross the placental barrier in mice and rats.

Labor and Delivery

The effects of diclofenac on labor and delivery in pregnant women are unknown. Because of the known effects of prostaglandin-inhibiting drugs on the fetal cardiovascular system (closure of ductus arteriosus), use of diclofenac during late pregnancy should be avoided and, as with other nonsteroidal anti-inflammatory drugs, it is possible that diclofenac may inhibit uterine contraction.

Nursing Mothers

Diclofenac has been found in the milk of nursing mothers. As with other drugs that are excreted in milk, diclofenac is not recommended for use in nursing women.

Pediatric Use

Safety and effectiveness of diclofenac in children have not been established.

Geriatric Use

Of the more than 6000 patients treated with diclofenac in U.S. trials, 31% were older than 65 years of age. No overall difference was observed between efficacy, adverse event or pharmacokinetic profiles of older and younger patients. As with any NSAID, the elderly are likely to tolerate adverse reactions less well than younger patients.

ADVERSE REACTIONS

Adverse reaction information is derived from blinded, controlled and open-label clinical trials, as well as worldwide marketing experience. In the description below, rates of more common events represent clinical study results; rare events are derived principally from marketing experience and publications, and accurate rate estimates are generally not possible.

In a 6-month, double-blind trial comparing Voltaren Delayed-Release Tablets (N=197) to Cataflam Immediate-Release Tablets (N=106) vs. ibuprofen (N=197), adverse reactions were similar in nature and frequency. In 718 patients treated for shorter periods, i.e., 2 weeks or less, with Cataflam Immediate-Release Tablets, adverse reactions were reported one-half to one-tenth as frequently as by patients treated for longer periods.

The incidence of common adverse reactions (greater than 1%) is based upon controlled clinical trials in 1543 patients treated up to 13 weeks with Voltaren Delayed-Release Tablets. By far the most common adverse effects were gastrointestinal symptoms, most of them minor, occurring in about 20%, and leading to discontinuation in about 3% of patients. Peptic ulcer or GI bleeding occurred in clinical trials in 0.6% (95% confidence interval: 0.2% to 1%) of approximately 1800 patients during their first 3 months of diclofenac treatment and in 1.6% (95% confidence interval: 0.8% to 2.4%) of approximately 800 patients followed for 1 year.

Gastrointestinal symptoms were followed in frequency by central nervous system side effects such as headache (7%) and dizziness (3%).

Meaningful (exceeding 3 times the Upper Limit of Normal) elevations of ALT (SGPT) or AST (SGOT) occurred at an overall rate of approximately 2% during the first 2 months of Voltaren treatment. Unlike aspirin-related elevations, which occur more frequently in patients with rheumatoid arthritis, these elevations were more frequently observed in patients with osteoarthritis (2.6%) than in patients with rheumatoid arthritis (0.7%). Marked elevations (exceeding 8 times the ULN) were seen in 1% of patients treated for 2-6 months (see WARNINGS, Hepatic Effects).

The following adverse reactions were reported in patients treated with diclofenac:

Incidence Greater Than 1% - Causal Relationship Probable: (All derived from clinical trials.)

Body as a Whole: Abdominal pain or cramps, *headache, *fluid retention, abdominal distention.

Digestive: Diarrhea, *indigestion, *nausea, *constipation, *flatulence, liver test abnormalities, *PUB, i.e. peptic ulcer, with or without bleeding and/or perforation, or bleeding without ulcer (see above and also WARNINGS).

Nervous System: Dizziness

Skin and Appendages: Rash, pruritus.

Special Senses: Tinnitus.

*Incidence, 3% to 9% (incidence of unmarked reactions is 1%-3%).

Incidence Less Than 1% - Causal Relationship Probable: (The following reactions have been reported in patients taking diclofenac under circumstances that do not permit a clear attribution of the reaction to diclofenac. These reactions are being included as alerting information to physicians. Adverse reactions reported only in worldwide marketing experience or in the literature, not seen in clinical trials, are considered rare and are italicized.)

Body as a Whole: Malaise, swelling of lips and tongue, photosensitivity, anaphylaxis, anaphylactoid reactions.

Cardiovascular: Hypertension, congestive heart failure.

Digestive: Vomiting, jaundice, melena, aphthous stomatitis, dry mouth and mucous membranes, bloody diarrhea, hepatitis, hepatic necrosis, appetite change, pancreatitis with or without concomitant hepatitis, colitis.

Hemic and Lymphatic: Hemoglobin decrease, leukopenia, thrombocytopenia, hemolytic anemia, aplastic anemia, agranulocytosis, purpura, allergic purpura.

Metabolic and Nutritional Disorders: Azotemia.

Nervous System: Insomnia, drowsiness, depression, diplopia, anxiety, irritability, aseptic meningitis.

Respiratory: Epistaxis, asthma, laryngeal edema.

Skin and Appendages: Alopecia, urticaria, eczema, dermatitis, bullous eruption, erythema multiforme major, angioedema, Stevens-Johnson syndrome.

Special Senses: Blurred vision, taste disorder, reversible hearing loss, scotoma.

Urogenital: Nephrotic syndrome, proteinuria, oliguria, interstitial nephritis, papillary necrosis, acute renal failure.

Incidence Less Than 1% - Causal Relationship Unknown: (Adverse reactions reported only in worldwide marketing experience or in the literature, not seen in clinical trials, are considered rare and are italicized.)

Body as a Whole: Chest pain.

Cardiovascular: Palpitations, flushing, tachycardia, premature ventricular contractions, myocardial infarction.

Digestive: Esophageal lesions.

Hemic and Lymphatic: Bruising.

Metabolic and Nutritional Disorders: Hypoglycemia, weight loss.

Nervous System: Paresthesia, memory disturbance, nightmares, tremor, tic, abnormal coordination, convulsions, disorientation, psychotic reaction.

Respiratory: Dyspnea, hyperventilation, edema of pharynx.

Skin and Appendages: Excess perspiration, exfoliative dermatitis.

Special Senses: Vitreous floaters, night blindness, amblyopia.

Urogenital: Urinary frequency, nocturia, hematuria, impotence, vaginal bleeding.

Our annual reunion demonstrates what makes The James so special - our dedication to caring for your patients. You see, The Arthur G. James Cancer Hospital and Research Institute has a focused mission. To help people who have cancer and their families. So if you ever need to refer a cancer patient, you can be sure our primary interest is their good care.

that can provide your cancer patients with the very best care available, the most advanced treatments and a profound level of compassion. We can also provide you with any treatment and referral information you need via the OSU ConsultLine, 1-800-824-8236.

WHAT'S SO SPECIAL ABOUT A CANCER HOSPITAL THAT ORGANIZES A PATIENT REUNION EVERY YEAR?

This service can give you access to our cancer physicians from 8 a.m. to 6 p.m.

The James is a research and treatment facility dedicated solely to fighting cancer. And everything about The James is geared toward that goal.

We are one of only 27 Comprehensive Cancer Centers in the country, as designated by the

National Cancer Institute. We are the only freestanding cancer hospital in the midwest. And assembled at The James is a group of the world's finest researchers and cancer physicians who continually broaden our knowledge and raise the standards of cancer care.

That is what makes The James a premier cancer facility. A place

weekdays, and 24 hours a day, seven days a week, if an emergency should come up.

There are many reasons The James is so special. Here are just a few. But every year at our reunion, there are about 1,200 more.

The Arthur G. James Cancer Hospital and Research Institute, Columbus, Ohio

THE JAMES

THE NEXT GENERATION OF HOPE

Busy Legislative Session Ends on Quiet Note

Larry L. Light
David J. Thompson

For the past two years, legislators and special interest groups have been working furiously on hundreds of issues, a good number of which were health care related. With the exception of the controversial and hard-fought workers' compensation reform measure passed in June 1993, the list of passed legislation did not adversely impact the practice of medicine. Take a look back at 1993-94 on Capitol Hill through this brief review of Society efforts and successes.

Historically, the end of a legislative session produces grueling all-night sessions and a fury of activity throughout the halls of the Capitol. Typically, this organized confusion provides lawmakers with a unique opportunity to quickly move legislative proposals that would otherwise be impossible during a regular session day.

Perhaps it was the outcome of the November election, or the internal political struggles of reorganization within the Senate and House leadership, that led to a reasonably quiet end to the 175th legislative session early on the morning of November 23, 1994.

Yet, this past two-year session has been less than quiet in the health care arena: The State Society's Department of Legislative Affairs reviewed more than 6,800 pieces of legislation and lobbied or monitored more than 325 bills relating to physicians, medicine, and health care. Listed below are a few items that occasionally took center stage.

Allied health scope of practice

The Society's lobbying efforts were never more apparent than when our organization successfully hindered the expansion of allied health care practitioners' scope of practice. Throughout the legislative session, allied health care providers fought hard to expand their scope of practice. Optometrists, physical therapists, psychologists, and nurses all pursued legislation,

which the State Society and specialty societies strongly opposed.

Senate Bill 1061, introduced by Senator Roy Afflerbach (D-Lehigh), proposed to allow optometrists the use of therapeutic drugs to treat patients. After both defeat and subsequent passage by the Senate, this legislation was held by the House Professional Licensure Committee without further action. The Society and the Academy of Ophthalmology opposed the bill.

That committee did, however, hold a public hearing in July 1993 on House Bill 1531, which would have allowed the state physical therapy board to enact regulations permitting physical therapists to treat patients without a referral from a physician. Introduced by Representative Dwight Evans (D-Philadelphia), the bill was reported to the legislature with several amendments early in 1994; strong opposition delayed two scheduled votes, and the bill failed to pass.

House Bill 877 and Senate Bill 370, the psychologists' continuity of care bills introduced by Representative Mark Cohen (D-Philadelphia) and Senator Doyle Corman (R-Centre), did not progress as far as the other two allied health bills. Although approved by the House Health and Welfare Committee, the House version of the psychologists' bill—which would have directed hospitals to grant privileges to psychologists so that they could admit patients and manage their care—became stalled in the House Appropriations Committee. The Society opposed the bill on the grounds that psychologists are not trained to provide clinical medical care in a hospital setting.

A final allied health practice measure sought to allow certified registered nurse practitioners (CRNPs) to write prescriptions for their patients. Senate Bills 1574 and 1575 were introduced as part of a comprehensive effort to increase access to primary care providers.

The Society agreed with the State Board of Medicine that CRNP training would not properly allow the same unlimited right of prescription as that grant-

Mr. Light is the Society's director of governmental affairs; Mr. Thompson is assistant director.

ed to physicians, and that CRNPs should be restricted as are physician assistants. The Society opposes any legislation of this type unless it proposes restrictions and responsibilities similar to those placed on physician assistants. Senator John Peterson (R-Venango), prime sponsor of the bill and chairman of the Senate Public Health and Welfare Committee, did not bring the bills up for committee vote.

All of these bills are likely to be reintroduced in the new session, convened on January 3, and new legislation is also possible from the pharmacists and chiropractors. Along with the specialty societies, Society allies in these fights have included the Insurance Federation, Pennsylvania Blue Cross and Blue Shield plans, and the Hospital Association of Pennsylvania (HAP).

In related action, the General Assembly passed a bill allowing physician assistants to practice, with additional restrictions, in the time period between graduation and the determination that they have passed their licensure examination. Senate Bill 1576 was sponsored by Senator Peterson.

Medical liability/tort reform

While there was no action on specific medical liability or tort reform bills in the 1993-94 legislative session, the issue was frequently discussed in the legislative arena. Late in 1993, the Casey Administration brought the tort reform issue to the General Assembly by proposing legislation to tax health care providers to pay for the continued operation of the health care conciliation panels.

Although that proposal was set aside, the governor's staff did then request that the State Society, HAP, and the trial lawyers be prepared to discuss the medical liability reform issue in hopes of finding some common ground. Had the tax bill been given further consideration, Society amendments for liability reform were prepared for introduction by legislators supporting our views.

Medical liability reform was also one of the five pieces of legislation that made up Governor Casey's health system reform package, released late in 1992. His plan was designed to reform and recreate the arbitration panels. Although that entire package of bills was also set aside, the Senate Public Health and Welfare Committee did conduct a public hearing on the issue of tort reform and the value of arbitration systems. The Society recommended that more comprehensive reform was needed to reduce litigation costs and to save the tort system money.

PAMPAC Efforts Pay Off

In addition to the successes on the legislative front, the Society's political action committee—PAMPAC—played an integral role in a number of key political races.

On the federal level, PAMPAC's support helped Congressman Rick Santorum upset incumbent U.S. Senator Harris Wofford, while at the same time took part in a number of congressional victories. On the state level, PAMPAC became heavily involved in several "open" seats in both chambers and enjoyed some big wins.

Expect PAMPAC to play a large part in future Society efforts, as well.

Other medical liability or tort reform legislation addressed the issue from various aspects, including from limiting contingency fees to practice parameters. There were bills aimed at encouraging periodic payments, limiting punitive damages, and providing medical liability immunity to volunteer health care providers. Also, the Society drafted and Senator D. Michael Fisher (R-Allegheny) introduced Senate Bill 1173, proposing comprehensive medical liability reform. Look for reintroduction of most of these bills in the new session.

Insurance mandates

The General Assembly has been strongly supportive of legislation requiring that insurance plans include specific coverage if there is a definitive link to overall cost savings as a result of the mandate. The child immunization law and the recent law mandating coverage for pap smears and gynecological exams (Act 20 of 1994) reflect that assessment.

Most recently, legislation was introduced to require insurance coverage for cancer prevention and early detection care. Business and insurance groups have opposed this type of legislation; specific issue groups and the State Society support such legislation.

Any willing provider

The first "any willing provider" legislation discussed in the General Assembly was a "freedom of choice" bill introduced early in 1993 at the request of the Pennsylvania Pharmaceutical Association. Although not enacted into law, House Bill 282 did open the door for thoughtful consideration of later bills supported by the Society.

Three public hearings on the issue were held jointly by the House Insurance Committee and the Senate Public Health and Welfare Committee. As a result, legislators have begun to focus on the fairness of the process by which providers are included or excluded by plans, the need to preserve

"The State Society... reviewed more than 6,800 pieces of legislation and lobbied or monitored more than 325 bills..."

consumer (patient) choice, and the impact on the cost of care.

Later bills supported by the Society were: Senate Bill 1525, introduced by Senator Raphael Musti (D-Luzerne), and House Bill 2748, introduced by Representative Richard Olasz (D-Allegheny).

Workers' compensation

The most contentious law from many physicians' viewpoints was the workers' compensation reform law, Act 44 of 1993. Acting Governor Mark S. Singel signed Senate Bill 1 into law on July 2, 1993. The "reform" law, opposed by the State Society, several physician specialty organizations, and other groups ranging from the Hospital Association of Pennsylvania to the trial bar, was essentially enacted to

Your Protection: State Society Halts Adverse Legislation

As a necessity, the grassroots and formal lobbying efforts of the Society in the 1993-94 legislative session focused heavily on opposing major pieces of legislation advocated by other health care provider groups and other special interests. Some of the battles, such as fights on allied health scope of practice bills, were replays of issues that seemed to intensify in this session. Others, such as the health system reform initiative and a cigarette sale bill, were newly developed. Almost without exception, State Society efforts to defeat or prevent passage of the following bills was possible only through the cooperative efforts of the entire physician "family"—specialty groups as well as the State Society.

- *Senate Bill 465, Renal Dialysis Protocols*—Sought protocols for re-use of dialysis filters in statute; no committee action taken.
- *Senate Bill 1016/House Bill 1959, Health Care Provider Fees*—Proposed to tax physicians and others required to contribute to the Medical CAT Fund an additional amount to fund the health care arbitration system; tax revenues would replace general fund dollars; defeated in Senate, as well as House committee.
- *Senate Bill 1581/House Bill 2154, Limiting Charge for Medical Records*—Proposed to limit chargeable cost for copies of medical records to 25 cents per page; "died" on the House calendar without final vote.
- *Senate Bill 1773/House Bill 589, Sale of Cigarettes to Minors*—Proposed to limit sale of cigarettes to minors, but did not provide for a license suspension when an owner permitted sales; also would have provided funding for enforcement activities and precluded more restrictive action by local governments; died in committee.
- *House Bill 573, Medical Abuse Reporting*—Sought to require special reporting of certain "medical events"; never passed committee.
- *House Bill 1402, C-Section Practice Parameters*—Proposed special practice parameters for C-Section deliveries when the third-party reimbursement was with public funds; died in committee.
- *House Bill 2100, Triplicate Prescriptions*—Sought three-part prescription forms; died in committee.
- *House Bill 2733, PACE/Prescriptions*—Sought required use of generic drugs for PACE patients, unless an "adverse effect could be documented"; committee did not approve.
- *House Bill 2709, Informed Consent*—Sought separate informed consent requirement for reconstructive breast surgery; never considered by committee.

benefit employers and insurance companies by limiting the cost of medical care for injured workers. Although the Society unsuccessfully opposed the cap (113 percent of Medicare) placed on reimbursement rates, it was able to change some areas of the law: Provisions relating to the panels of providers, specific requirements for some aspects of the processing and payment procedures, and a break in the absolute tie to the Medicare fee schedule in 1995 were added by amendment.

A measure of success

Success can be measured by prevention of adverse effects—the list of passed legislation did not adversely impact the practice of medicine in Pennsylvania. For example, rather than encroaching on physician autonomy, recently enacted laws seek ways to increase organ donations and provide protections for the corporate structure used by many physicians.

The organ donor measure, Senate Bill 1662, is intended to increase the supply of organs available for transplants by clarifying the responsibilities for making requests of families. The limited liability proposal, Senate Bill 1059, will provide further protections for physicians who have an incorporated practice. Both bills were among the very last passed by the General Assembly on November 22, 1994.

Finally, the Society supported the legislation re-enacting Senate Bill 1052, the Health Care Cost Containment Law. Introduced by Senator Hardy Williams (D-Philadelphia), the bill was approved in June 1993 (Act 34 of 1993). Included in the final law is a Society amendment authorizing the participation of two additional physician delegates as members of the cost containment council's newly created Technical Advisory Group.

Legislation revised

Another very vital aspect of the Society's lobbying efforts over the past two years has been ongoing revision of or amendments to important pieces of legislation. Although these bills were not passed by both chambers, had they done so and reached the governor's desk for signature, the interests of physicians would have been protected by amendments negotiated by the State Society.

House Bill 1152, prohibiting self-referrals, was introduced as part of Governor Casey's health system reform package. After the bill was forced out of the House Insurance Committee, the governor's office

agreed to language requested by the Society to bring the bill into conformity with the AMA position on the issue. The most significant changes related to exemptions from the self-referral ban.

Another important amendment was added to legislation to replace the elected coroner in "second-class counties" with an appointed medical examiner. Although the bill was passed only by the House, the Society insisted that physicians have a role in the process for selecting the individual to be appointed.

Perhaps the most critical work of this nature by the Society was associated with legislation introduced by Representative Allen Kukovich (D-Westmoreland). House Bill 1497 aimed at requiring physicians to offer care to Medical Assistance (MA) patients. The Society won approval of an amendment to direct MA patients needing care to physician referral networks in order to assure access.

The Society argued successfully that not all physicians could include MA patients in their practice, some because their caseload was already too heavy and others because no MA patients were seeking access to care in their area. After the bill was amended by the House Health and Welfare Committee, it stalled in the House Appropriations Committee.

There is certainly a potential for all of these bills to be reintroduced in the 1995-96 legislative session.

Moving forward

Many of the bills on health issues introduced by members of the House and Senate are expected to be reintroduced in the new session by the original sponsors; further, many bills introduced by now-retired members are also expected to reappear with new sponsors.

Some of these bills hold a special interest for the Society, and we will be working to have them re-introduced. Included are those already discussed—medical liability reform, any willing provider, and insurance claims reforms—as well as:

- *Anti-Smoking*—Would build on efforts to prohibit smoking in designated areas.
- *HIV Testing*—Would permit physicians to order HIV tests as they would for any other communicable disease, and also when necessary for the care of the patient and of the public or health care workers without further consent from the patient.
- *Utilization Review Reform*—Would offer comprehensive review of the UR system; prime sponsor accepted suggestions for revisions although bill never considered in committee.
- *Medical Care Savings Accounts*—As a continuation of health system reform ef-

forts, would offer alternative to mandated universal coverage.

- *Health Insurance Portability*—Also related to health system reform, would allow individuals to carry their health insurance with them from job to job.

In closing, it is important to note that much of the Society's work was successful due to widespread support from local physicians and Alliance key contacts. To learn more about how you can participate in the Society's Capitol Contacts program, call (800) 228-7823, ext. 453. ☐

PMSCO's New Executive: Experience, Flexibility Will Be Key to Success

Judd A. Mellinger-Blouch

Michael P. Lance this month joins PennMed Member Services Company (PMSCO) as executive director and chief operating officer. In this position, he will head up the management team for PMSCO, act as lead consultant, and oversee the development of data management and other services.

This interview, conducted in December, is offered as an introduction to Mr. Lance and his vision for the future of PMSCO.

Question: *In the four years you've been with Riverside Community Health Plan Medical Group, the group's financial position has improved dramatically. Could you explain what you did to engineer this turn around?*

Mike Lance (ML): When I arrived at Riverside, it had been poorly managed. With an independent practice association like Riverside, where the health insurance plans delegate the risks entirely off to the providers, you need a much higher level of management to make it work.

Basically, the first thing I was able to do was address the revenue side. That's the easiest thing to do, to try and get improved capitation revenue for the physicians and to actively pursue the third-party recovery, such as stop-loss recoveries, coordination of benefits, and third-party liabilities expense recoveries. After the revenue was increased to the appropriate level, we began to address the expense side. That's where the rubber hits the road—in developing new contracts with better rates, some global rates, and managing the shared risk pools much better. Appropriate management of the shared risk pools is where most medical groups have the opportunity to generate significant additional dollars.

Question: *Can you tell us a couple of things you did to control your expenses?*

ML: Improved utilization controls, established effective authorization utilization programs, re-negotiated some of the contracts with development of some global rates, and capitated some services that were not capitated before. Of utmost im-

portance was the development of a sophisticated computer system to effectively manage risk contracting.

Question: *Would this include capitating some services by specialists?*

ML: To some extent, yes. At this point in time, there has been very little specialty capitation. However, in the last three months, we have generated 10 actuarial calculations of specialty capitation for 1995. The primary reason is that managed care significantly reduces utilization of services. Capitating based on historical utilization would have resulted in overcapitation. We feel the utilization of services in California has finally leveled out, allowing for appropriate capitation.

Question: *Do you do those actuarial calculations yourself?*

ML: Yes, I've done actuarial work for many years, and there really is very little reliable actuarial data available out there by the major actuarial firms on specialty capitation. But we have been managing capitation contracts for 10 years, and we have a good three years of recent data on our computer that we can utilize to develop a specialty capitation, particularly in our area. In fact, many folks in California have come to our organization to develop specialty capitation.

Question: *So, you've served as a resource, not just to your particular organization, but throughout the state of California?*

ML: Yes. I'm a board member of the Independent Practice Association of California, and in California there are about 400 IPAs. Through that affiliation, I've been able to make available this information to other IPAs.

Question: *A lot of people may wonder why someone who has a good job in Southern California would want to leave that secure position in a more temperate climate to work for a start-up organization in the Northeast U.S. What did you see at the*

Mr. Mellinger-Blouch is the Society's assistant director of marketing.

Pennsylvania Medical Society that made you want to make the move and work for PMSCO?

ML: When I was contacted by the executive search firm, I was not actively seeking to make a change. I had been receiving search firm contacts fairly often, and generally, I disregarded all of them. But this opportunity really peaked my interest because I was familiar with the medical societies from my tenure at the Arizona Medical Association. I understand the medical association and society business, and feel that the folks in Pennsylvania and [Executive Vice President] Roger Mecum have a significant vision of providing value for the physicians in Pennsylvania. PMSCO's mission is to put physicians in a position where they can take a leadership role in the future health care delivery system. It is my sincere hope that we can help the physicians of Pennsylvania transition successfully, and less painfully than California, into the future of managed health care.

On the personal side, this career opportunity is very significant, but I also think it provides a value of life that is much improved over California. I'm originally from Kansas, and I really miss the four seasons, because we don't have them here.

Question: *Can you tell me what lessons you have learned in Arizona and California that you feel will apply to Pennsylvania?*

ML: California is perceived as being, and in reality is, on the cutting edge of health care and has been for many years. I hope that what we can do in Pennsylvania is learn from mistakes that California has made. One of the important lessons is that physicians control all aspects of medicine, yet physicians are being controlled by all players in health care. Therefore, one of the significant opportunities most physicians have missed in California is being more in control of health care instead of being controlled. I feel PMSCO can develop opportunities for physicians to accomplish this goal.

In addition, I hope that PMSCO will be able to help the physicians in Pennsylvania transition into managed care—or more managed care—less painfully than has occurred out here in California. It is a painful process, and we've made a lot of mistakes along the way. One of the most recent lessons has occurred within our IPA. Very few IPAs ever considered the value of having their primary care physicians sign exclusive agreements. Now we're facing other providers trying to buy away our primary care physicians, and we are re-

Michael P. Lance comes to Pennsylvania after more than 28 years of work in the health care field. A certified public accountant, he received his CPA certificate from the state of Washington in 1980. In addition, he is a nationally recognized health care conference speaker.

His broad background includes work in organized medicine with the Arizona Medical Association, as well as in managed care. In the past 10 years, he has served as chief executive officer of an 11-physician, multispecialty practice; as CEO of a two-hospital preferred provider organization; and as president of Managed Healthcare Solutions, Inc., a health care consulting and management firm.

Before joining the PennMed Member Services Company, Mr. Lance was chief executive officer of Riverside Community Healthplan Medical Group, a 240-physician, multispecialty independent practice association in Riverside, California, with 14 HMO contracts and 45,000 capitated lives.

structuring to accomplish this in an appropriate manner.

Question: *You don't feel, then, that there is a way that you can just take what you've learned and transpose it onto Pennsylvania?*

ML: It's not my expectation to come in and implement everything that's been done in California. We want to see some progress as soon as possible, but we want to be successful and start building on some successes. We should be able to shorten the time frame to achieve success by taking my experience, being flexible, and adapting whatever works in the different areas.

I really believe that health care is more local and regional. I don't even think it's statewide. It's going to take getting out and learning the medical politics, the medical environment, and the competition in the different areas within Pennsylvania. A cookie-cutter approach won't work in Pennsylvania because of the different medical demographics, such as rural health care, which is tremendously different than metropolitan health care. Many people don't even understand the word HMO in a lot of places.

In California, we've succeeded as a multispecialty IPA, which is very difficult to do in today's environment. It took a lot of creativity and knowledge, and I'm very optimistic that the PMSCO staff will be flexible and creative enough to develop successful physician organizations, regardless of how they are ultimately structured.

Question: *You talk about the vision of PMSCO. Could you put into words your understanding of PMSCO's vision?*

ML: Providing value to the physicians of Pennsylvania by taking a leadership role

About PMSCO

The PennMed Member Services Company (PMSCO) is the Society's newest for-profit subsidiary, established to provide a broad spectrum of services to Society members to help them adjust to the changing medical environment. PMSCO's mission is to help physicians take a leadership role in the changing health care system. It's an evolving company that will adjust to meet the ever-changing needs of physicians.

PMSCO is currently consulting with physicians in more than 20 locations around the state, helping them deal more effectively with managed care, hospitals, large businesses, and other players in the health care market. Michael Lance is expected to be on board full time by January 16, 1995.

For more information on the company and what it might do for you, call PMSCO at (800) 228-7823.

and assisting the physicians to transition in an appropriate manner into the growth of managed care is my understanding of PMSCO's vision, and I think it's an admirable and attainable vision.

PMSCO has been sponsored and initially developed by the Pennsylvania Medical Society. I believe that the vision of a medical society assisting physicians in the state to adapt and transition into managed care is a good one because physicians need a tremendous amount of assistance with this process. Because of a lack of understanding, and the fear of being left out of the future of health care, many physicians enter into relationships that they later regret. Hopefully, we can provide them the education, guidance, and leadership to get through that fear, and to enter into the appropriate alliances and relationships that truly provide them value.

I'm really impressed with the Society's vision, and I think they're on the cutting edge to establish a vehicle to help physicians be players in managed care and not just participants. Many other medical societies are going to be watching this activity.

Question: *If you could design the perfect integrated delivery system, how would it look to you? What form would it take?*

ML: I feel that physicians do need to move forward in a partnership with hospitals into the health care future. However, I also feel that the structure needs to be controlled by physicians. Too many of them are controlled by hospitals just because hospitals have the funding and desire to protect their revenue streams, particularly in competitive areas.

I know we can provide physicians with multiple structures, resulting in several options to participate, depending on their goals. There are some physicians who may want to be employees, some who may want to be part of a group, and others who may want to be part of an IPA. All of these structures can work, but the real thing we've learned in California is that physicians can take a much stronger leadership in developing those organizations with controlling interest, instead of being controlled by the payers and other players with conflicting motivations.

We are experiencing today in California HMOs that are now starting to ratchet down capitation, just like payers have ratcheted down fee-for-service. Once physicians become successful in managing health care, then the HMOs try to compete against each other by lowering premiums for patients, employees, and employers. This is desirable as long as providers con-

tinue to be appropriately compensated for providing quality services.

Question: *It's not always that the ratcheting down is due to health care costs going up, but because the HMOs require more funds for investor dividends and administrative expenses.*

ML: I can tell you that the administrative costs of HMOs are substantial. I would like to see them provide an appropriate share of the premium for health care services and make sure that share is going to health care providers. However, I find in many cases that less sophisticated medical groups and IPAs do not have the knowledge, ability, or leverage to get the appropriate share of the premium. If we can manage HMO costs a little bit better, then savings should be passed along to the employers and patients. But physicians have to be strong leaders to control this, and they have to have good data. If you don't have this combination, you won't be very successful.

Question: *If I was a physician and I came to you for some practical advice on getting a physician organization started, what would you tell me?*

ML: Well, there is no one answer that meets every physician's situation. The first thing we'd need to do is assess your local medical environment, your local competition, and local politics. All of those play a factor in developing a successful delivery system.

The next issue is partnerships. Do you need a partner, and if you do, who is the most strategic partner for you?

But what you need the most is expertise. Many of the organizations developed today are done without expertise or done by consultants who don't have the practical experience. As you are aware, I have been a consultant, but I have practical experience in all areas for which I consult. I've been in medicine for about 28 years, all total, including seven years with an HMO and the remainder on the provider side.

Physicians need guidance and expertise and assistance from people who have actually experienced health care and not people who just learn from seminars. I know we can offer them that and guide them, probably to the best arrangement and the best strategic partnership and the best structure.

Most importantly, we bring this sensitivity and understanding of how physicians provide their livelihoods and the sincere desire to assist those physicians wanting to maintain their livelihoods as practicing physicians will into the future. ◊

RELY ON PERCOCET® TO

(Oxycodone [WARNING: may be habit forming] and Acetaminophen Tablets, USP)

CONTROL PAIN. THE SOONER THE BETTER

Effective Broad Spectrum Pain Relief

Prescribe Percocet® and give your patients the benefits of oxycodone combined with acetaminophen for the relief of moderate to severe pain.

You can count on Percocet® due to its analgesia—to control pain...the sooner the better. Side-effects may occur with the use of Percocet and may include light-headedness, dizziness, sedation, nausea, and vomiting.

No Patient Should Suffer From Pain

You may avoid pain by providing adequate time-contingent dosing to prevent breakthroughs rather than subduing them[†].

Regular schedule dosing with Percocet may prevent a recurrence of pain[†]. The usual adult dosage is one tablet every six hours as needed for pain.

**Accept no substitute
for PERCOCET®**

RELY ON PERCOCET® TO

(Oxycodone (WARNING: May be habit forming) and Acetaminophen Tablets, USP)

CONTROL PAIN. THE SOONER THE BETTER

REFERENCE:

1. Acute Pain Management Guidelines Panel. *Acute Pain Management in Adults: Operative Procedures. Quick Reference Guide for Clinicians*. AHCPR Pub. No 92-0019, pg. 12. Rockville, Md: Agency for Health Care Policy and Research, Public Health Service, U.S. Department of Health and Human Services.

BRIEF SUMMARY

PERCOCET® (Oxycodone (WARNING: may be habit forming) and Acetaminophen Tablets, USP)

INDICATIONS AND USAGE PERCOCET is indicated for the relief of moderate to moderately severe pain.

CONTRAINDICATIONS PERCOCET should not be administered to patients who are hypersensitive to oxycodone or acetaminophen.

WARNINGS Drug Dependence: Oxycodone can produce drug dependence of the morphine type and, therefore, has the potential for being abused. Psychic dependence, physical dependence and tolerance may develop upon repeated administration of PERCOCET, and it should be prescribed and administered with the same degree of caution appropriate to the use of other oral narcotic-containing medications. Like other narcotic-containing medications, PERCOCET is subject to the Federal Controlled Substances Act (Schedule II).

PRECAUTIONS General: *Head Injury and Increased Intracranial Pressure:* The respiratory depressant effects of narcotics and their capacity to elevate cerebrospinal fluid pressure may be markedly exaggerated in the presence of head injury, other intracranial lesions or a pre-existing increase in intracranial pressure. Furthermore, narcotics produce adverse reactions which may obscure the clinical course of patients with head injuries.

Acute Abdominal Conditions: The administration of PERCOCET or other narcotics may obscure the diagnosis or clinical course in patients with acute abdominal conditions.

Special Risk Patients: PERCOCET should be given with caution to certain patients such as the elderly or debilitated, and those with severe impairment of hepatic or renal function, hypothyroidism, Addison's disease, and prostatic hypertrophy or urethral stricture.

Information for Patients Oxycodone may impair the mental and/or physical abilities required for the performance of potentially hazardous tasks such as driving a car or operating machinery. The patient using PERCOCET should be cautioned accordingly.

Drug Interactions: Patients receiving other narcotic analgesics, general anesthetics, phenothiazines, other tranquilizers, sedative-hypnotics or other CNS depressants (including alcohol) concomitantly with PERCOCET may exhibit an additive CNS depression. When such combined therapy is contemplated, the dose of one or both agents should be reduced.

The use of MAO inhibitors or tricyclic antidepressants with oxycodone preparations may increase the effect of either the antidepressant or oxycodone.

The concurrent use of anticholinergics with narcotics may produce paralytic ileus.

Usage in Pregnancy Pregnancy Category C: Animal reproductive studies have not been conducted with PERCOCET. It is also not known whether PERCOCET can cause fetal harm when administered to a pregnant woman or can affect reproductive capacity. PERCOCET should not be given to a pregnant woman unless in the judgment of the physician, the potential benefits outweigh the possible hazards.

Nonteratogenic Effects: Use of narcotics during pregnancy may produce physical dependence in the neonate.

Labor and Delivery: As with all narcotics, administration of PERCOCET (oxycodone and acetaminophen tablets, USP) to the mother shortly before delivery may result in some degree of respiratory depression in the newborn and the mother, especially if higher doses are used.

Nursing Mothers: It is not known whether PERCOCET is excreted in human milk. Because many drugs are excreted in human milk, caution should be exercised when PERCOCET is administered to a nursing woman.

Pediatric Use: Safety and effectiveness in children have not been established.

ADVERSE REACTIONS The most frequently observed adverse reactions include lightheadedness, dizziness, sedation, nausea and vomiting. These effects seem to be more prominent in ambulatory than in nonambulatory patients, and some of these adverse reactions may be alleviated if the patient lies down.

Other adverse reactions include euphoria, dysphoria, constipation, skin rash and pruritus. At higher doses, oxycodone has most of the disadvantages of morphine including respiratory depression.

DRUG ABUSE AND DEPENDENCE PERCOCET (oxycodone and acetaminophen) Tablets are a Schedule II controlled substance.

Oxycodone can produce drug dependence and has the potential for being abused. (See WARNINGS.)

OVERDOSAGE Acetaminophen Signs and Symptoms: In acute acetaminophen overdose, dose-dependent, potentially fatal hepatic necrosis is the most serious adverse effect. Renal tubular necrosis, hypoglycemic coma and thrombocytopenia may also occur.

In adults, hepatic toxicity has rarely been reported with acute overdoses of less than 10 grams and fatalities with less than 15 grams. Importantly, young children seem to be more resistant than adults to the hepatotoxic effect of an acetaminophen overdose. Despite this, the measures outlined below should be initiated in any adult or child suspected of having ingested an acetaminophen overdose.

Early symptoms following a potentially hepatotoxic overdose may include: nausea, vomiting, diaphoresis and general malaise. Clinical and laboratory evidence of hepatic toxicity may not be apparent until 48 to 72 hours post-ingestion.

Treatment: The stomach should be emptied promptly by lavage or by induction of emesis with syrup of ipecac. Patient's estimates of the quantity of a drug ingested are notoriously unreliable. Therefore, if an acetaminophen overdose is suspected, a serum acetaminophen assay should be obtained as early as possible, but no sooner than four hours following ingestion. Liver function studies should be obtained initially and repeated at 24-hour intervals.

The antidote, N-acetylcysteine, should be administered as early as possible, preferably within 16 hours of the overdose ingestion for optimal results, but in any case, within 24 hours. Following recovery, there are no residual, structural, or functional hepatic abnormalities.

Oxycodone Signs and Symptoms: Serious overdose with oxycodone is characterized by respiratory depression (a decrease in respiratory rate and/or tidal volume, Cheyne-Stokes respiration, cyanosis), extreme somnolence progressing to stupor or coma, skeletal muscle flaccidity, cold and clammy skin, and sometimes bradycardia and hypotension. In severe overdose, apnea, circulatory collapse, cardiac arrest and death may occur.

Treatment: Primary attention should be given to the reestablishment of adequate respiratory exchange through provision of a patent airway and the institution of assisted or controlled ventilation. The narcotic antagonist naloxone hydrochloride (Narcan®) is a specific antidote against respiratory depression which may result from overdose or unusual sensitivity to narcotics, including oxycodone. Therefore, an appropriate dose of naloxone hydrochloride (usual initial adult dose 0.4 mg to 2 mg) should be administered preferably by the intravenous route, and simultaneously with efforts at respiratory resuscitation (see package insert). Since the duration of action of oxycodone may exceed that of the antagonist, the patient should be kept under continued surveillance and repeated doses of the antagonist should be administered as needed to maintain adequate respiration.

An antagonist should not be administered in the absence of clinically significant respiratory or cardiovascular depression. Oxygen, intravenous fluids, vasopressors and other supportive measures should be employed as indicated.

Gastric emptying may be useful in removing unabsorbed drug.

DOSAGE AND ADMINISTRATION Dosage should be adjusted according to the severity of the pain and the response of the patient. It may occasionally be necessary to exceed the usual dosage recommended below in cases of more severe pain or in those patients who have become tolerant to the analgesic effect of narcotics. PERCOCET (oxycodone and acetaminophen tablets) is given orally. The usual adult dosage is one tablet every 6 hours as needed for pain.

HOW SUPPLIED PERCOCET (5 mg oxycodone hydrochloride and 325 mg acetaminophen tablets, USP), supplied as a white tablet, with one face scored and inscribed PERCOCET, and the other inscribed with DuPont name is available in:

Bottles of 100

NDC 0590-0127-70

Bottles of 500

NDC 0590-0127-85

Hospital Blister Pack of 25 (in units of 100)

NDC 0590-0127-75

Store at controlled room temperature (15°-30°C, 59°-86°F).

DEA Order Form Required.

Form Follows Function

Michael J. Prendergast, MD

A sense of urgency pervades the physician organization (PO) movement. But in the process of quickly forming an entity to unify physicians and deal effectively with hospitals and insurers, organizations are often structured with little thought about their function. It is assumed that an organization that brings together the invaluable services of a number of physicians will automatically be marketable in the evolving health care system. But there is no guarantee that this organization will offer a product that others want to purchase.

Some consultants have boiler-plate organizational structures they promote. Their strategy is to set up an organizational structure and then research the market for such an organization. Some physician groups in Pennsylvania have been formed in this manner and, in most cases, have no contracts with insurers or businesses. But, if a PO of a certain form will not be of value in its local marketplace, what sense is there in spending the time, effort, and considerable money to form it? The potential of success for a PO is greatly increased if the question of function is fully answered before the question of form is even considered.

To determine a proposed organization's function, the first factor that must be considered is the market for medical care. What kind of services and insurance plans is the market demanding?

Next, the organization's product should be outlined, along with a preliminary plan on how the product will be delivered to the market. Will primary care physicians in the PO serve as gatekeepers, or will patients have direct access to specialists? Will the organization accept financial risk for the cost effectiveness of care? Will there be quality guidelines or protocols established for the network?

Product delivery is closely tied to the issue of marketing to attract contracts and patients, which is a third important factor. To thoroughly analyze a potential PO's function, there are several key groups that must be considered:

- **Competitors:** What other organizations are offering similar products? This matter can become quite sticky because possible partners—hospitals and insurers—are also buying primary care practices. This can make them both partners and competitors.

- **Hospitals:** The condition and structure of the hospital industry in a market area is critical. The function of a PO is greatly affected if there is only one dominant hospital in a market, as opposed to several competitive tertiary care centers.

- **Insurers:** The presence of a payer willing to do business directly with POs is a crucial factor. In some areas, insurance companies are just now realizing that physicians hold the key

"The potential of success for a PO is greatly increased if the question of function is fully answered before the question of form is even considered."

to lower utilization, higher quality, and higher profits. POs must determine which functions—resource utilization management, a business strategy that will increase the insurer's market share, etc.—they will need to be viewed as a good partner.

- **Purchasers:** The behavior of major health care purchasers is still critical to a PO's function. It is important to know what factors, other than cost, are considered in actual selection of health care delivery options offered to employees. This understanding is also helpful in discussions with insurers who must produce the combination of services that will meet the needs of employers. Large corporations that self-insure offer physicians an opportunity to directly contract with the purchaser. But to take advantage of these opportunities, POs must have certain

attributes, such as quality and cost control programs with quantifiable results that can be reported to major purchasers. The topic of quality and cost measures can be overwhelming. A good way to get started, however, is by identifying the top five diagnoses within a practice or organization, and analyzing physician activities and results.

- **Patients:** It is essential to segment the patient population according to projected health care needs and according to which portions of the population should be targeted by the PO. One rule of thumb is to pick a segment of the population that offers the opportunity for physicians to make the biggest improvements in the way health care is currently being delivered. A PO that doesn't meet the needs of patients will fail. Functions essential to patients include adequate access to medical care in a given geographical area, a choice of physicians, and a good mix of specialists.

- **Physicians:** Both physicians involved in the organizing effort and those outside the organization must be considered. A PO must distinguish itself from other such organizations and other medical care providers, as well as pursue partnerships with other POs that will pave the way to acquiring patient contracts for the organization. Within the organization, key factors are physician leadership, the mix of primary care and specialty physicians, attitudes towards POs, and access to capital.

Physicians seeking to start an organization should be sure the consulting firm they hire has the skills and resources to conduct a market assessment. Only when this information has been gathered, and the organization's function has been defined, can physicians form a structure that will succeed.

Dr. Prendergast, a urologist from York, is chair of the PennMed Member Services Company (PMSCO) Board of Directors. Judd A. Mellinger-Blouch, PMSCO's marketing manager, provided staff assistance.

Extended Acute Care Leadership is Our Continuing Commitment.

Leadership.

It implies being the best; it requires vision, credibility and innovation.

In the Delaware Valley, one hospital, the Continuing Care Hospital of Philadelphia (CCH), has taken the lead in providing high-quality medical care for patients with a need for a longer-than-usual hospital stay.

Through its commitment to "high-touch, low-tech" patient care, provisions are made for the patient's every need. As a result, CCH enables its patients to achieve an optimal outcome.

The CCH approach to patient care also respects and accommodates the quality of the relationship that exists between the patient and the referring physician. In fact, CCH invites referring physicians to apply for privileges at the Hospital and to join with the CCH staff in managing the patient's medical care throughout the length of stay.

The Continuing Care Hospital is also committed to maintaining a staff that includes the region's most respected acute care providers and physicians who are board-certified in geriatric medicine. CCH is accredited by the Joint Commission on Accreditation of Health Care Organizations (JCAHO) and is licensed by the Pennsylvania Department of Health.

Given its strong leadership in extended acute care, CCH attracts patients from throughout the eight-county area, including Bucks, Chester, Delaware, Montgomery and Philadelphia counties in southeastern Pennsylvania; and Gloucester, Burlington, and Camden counties in southern New Jersey.

When the patient's need is for extended acute care, call the Continuing Care Hospital of Philadelphia at (215) 787-2399. We'll be pleased to send you a copy of our brochure or arrange a tour of our facility.

A New Tradition of Service. An Unmatched Standard of Care.

Implementing a Membership-Driven Process: Medicine's Future Is in Your Hands

Roger F. Mecum

Obtaining input from you, the member, is the foundation of the State Society's new strategic initiative. This article discusses how the Society will prioritize its initiatives, based on your input, to transform itself into a membership-driven organization.

In today's turbulent health care environment, change and unpredictability are commonplace. Market forces of unprecedented strength are pressing on physicians and affecting how they practice medicine. These same forces are impacting the State Society and how effectively it represents members. As a result of the work of the Task Force to Enhance Physician Involvement, formed in 1992 by House of Delegates action, the Society has come to fully recognize that active involvement by physicians in organized medicine is decreasing, and that many are questioning the relevancy of Society membership and have concerns about the value of belonging to the Society. The task force concluded that the Society needed to take a serious look at its future and set a course that would enable it to be a viable organization into the twenty-first century.

A new strategic direction for the State Society, one that will position the organization to become *membership driven*, will be implemented beginning this year. The plan, authorized by the House in October 1994, includes 12 recommendations in these four strategic areas:

- 1) prioritizing Society initiatives based on identified membership needs;
- 2) expanding two-way membership communications, emphasizing grassroots input;
- 3) allocating staff and fiscal resources to support membership priorities; and

- 4) streamlining the organizational infrastructure to respond quickly to changing membership priorities.

What is "membership driven?"

Put simply, a membership-driven organization is one that sets priorities and takes actions based on its understanding of the collective needs and wants of its membership. One of the keys to the Society's future success rests in the organization's ability to become membership driven—to become an organization that physicians *want* to join because they perceive value in the Society and its initiatives.

To become a membership-driven organization, the Society will:

- prioritize based on membership's collective needs,
- encourage bottom-up communications,
- solicit constant member feedback,
- respond willingly to change,
- exercise flexibility, and
- emphasize accountability.

The "MDP"

To become membership driven, the Society will use a "membership-driven process (MDP)"—a systematic process that emphasizes two-way communication with Society members, who are at the center of the organization's activities.

As illustrated in the diagram on the next page, the process begins with the collection of input from many sources, which is analyzed and used to help set annual priorities. The Society will take action during the year to achieve the priorities, let the membership know what was done on their behalf, and then continue the cycle by collecting input. Some key points to remember in each step of the MDP include:

"Ultimately, the final decisions rest with the system's 'brain'—in our case, the board and House."

Mr. Mecum is the Society's executive vice president.

Obtaining input

While listed as the first step, in reality, collection of data, opinions, and pertinent information from the membership and from outside sources will be a continuous process. If the Society is to be relevant and valuable to its members, it must have a "finger on the pulse constantly." This will involve both formal research—surveys, polls, secondary analysis of research done by others—and informal methods, such as personal contacts by staff and leadership, focus groups, mail and phone call analysis, and monitoring professional and lay media reports.

Analyzing information

So what does the Society do with all of this information? Step 2 calls for someone to analyze or make some sense of it—a daunting proposition. That someone will be a review panel, made up of representatives of the House of Delegates, Board of Trustees, staff, and "at-large" individuals who will bring specialized expertise to the group. This panel, which will meet before every board meeting, will report findings and make recommendations; it will not set policy.

As a major component of the MDP, the panel will be looking for trends, changing opinions and perceptions, and new ideas, as well as helping to steer the Society's research activities. If you look at the MDP as a dynamic, self-regulating system, you might consider the review panel to be the thermostat, turning on the heat where it's needed and suggesting a slow-down if input seems to warrant it. Ultimately, the final decisions rest with the system's "brain"—in our case, the board and House.

Establishing priorities

Key to the MDP is the establishment of clearly defined, achievable priorities for the Society, developed from the input collected from the membership and other sources. A set of priorities will be suggested to the board in July 1995 as an outcome of the review panel's work, and the board will make a preliminary decision. These identified priorities will be forwarded to the House of Delegates for review and approval at its annual business meeting in October.

Meanwhile, staff will have begun developing a budget based on the board's identified priorities. The budget will be priority based, rather than department based, and will be developed by staff teams assigned to each priority.

Acting on established priorities

The development of focused priorities will be an important part of determining how fiscal and staff resources can best be used. Staff will know more clearly what's most important to the membership to accomplish, and better decisions can be made as to what goes first and last on "to do" lists.

Every project and activity of the Society will be measured annually against the priorities for the year. Things that are no longer relevant to the membership will be eliminated; those that are important will be continued or expanded. The ongoing review panel activities will help monitor the effectiveness of the Society's activities, and the panel will make recommendations for change when appropriate.

Having a review panel will also help leadership and staff handle individual member suggestions that do not fall with-

in the clearly defined priorities. Suggestions can be referred to the panel for study or monitoring and, in effect, become part of the *continuous flow of input* from members. Also, training and procedures will be developed for staff and leaders to help them deal with requests for services or projects that fall outside of the scope of the established priorities.

Providing feedback to membership

Making sure the membership knows what the Society is doing and whether or not it is effective is critical. The MDP is designed to ensure that the Society's communications will be two way, that we'll be listening as much as we are telling. Given the daily competition for our members' attention from every conceivable medium, an important part of the process will be research to identify segments of our membership, the interests that may be unique to each segment, and the methods that will most effectively reach them.

The Society also must know exactly *what* to communicate to its members. Developing mechanical or electronic systems alone will not serve the Society's needs. Knowing what we have to say is as important—if not more so—as how to get the word out. The emphasis on two-way communications implies that personal, one-on-one contact is critical. To this end, there will be much, much more done to get staff and leadership of the Society out into the field to deliver and collect information. Support tools and reporting mechanisms will be developed that will be both easy to use and effective in getting valuable member input back to the review panel.

What should I expect?

As discussed, with this strategic initiative the Society will begin to focus its efforts on

specific priorities, the first set of which will be decided at the 1995 House of Delegates. Members should understand that Society leadership and staff will hold themselves accountable to the priorities once they are established, and that those suggested projects falling outside the focused priorities will be noted and forwarded to the MDP review panel. Available resources may limit the amount of time, money, and effort that can be devoted to a particular issue.

Still—and most importantly—as you can see from the above description, the MDP is a cyclical process that begins and ends with the membership. So, as a member of the organization, you can expect to hear more from the State Society in 1995 and the years to come. We may be contacting you to ask for your input on various issues. This contact may be in the form of a formal survey, a telephone poll, or an in-person, one-on-one meeting. We ask that when you receive a request for input, you take a few minutes to participate. The only way we can truly become membership driven is if we hear from our membership.

The flip side of obtaining input is providing feedback. To that end, the Society will be developing more effective ways of communicating to you the actions it has taken on your behalf. ☉

Editors Note: This article is one of many ways that the Society will continue to educate the membership on the new strategic direction. Watch your mail for more information in the future.

In the meantime, if you have any questions, please call Denise Zimmerman or Ken Robinson at (800) 228-7823 or (717) 558-7750.

The Society's New Strategy

This year, the State Society will begin to implement a new strategic direction, one that will position the organization to become *membership driven*. Under the plan, the Society will:

- 1) prioritize its initiatives based on identified membership needs;
- 2) expand two-way membership communications, emphasizing grassroots input;
- 3) allocate staff and fiscal resources to support membership priorities; and
- 4) streamline the organizational infrastructure to respond quickly to changing membership priorities.

Let's Hear It for Sharper Listening

David Woods

It is the disease of not listening, the malady of not marking, that I am troubled withal," says Sir John Falstaff in *Henry IV, Part Two*. Sir John's problem isn't new, although Shakespeare's remedy for it—hanging by the heels—was perhaps a bit extreme. In fact, the disease has surely become even more troublesome in recent times, aggravated by our propensity to tune out or switch off entirely the ubiquitous voices of radio and television—and as a result, increasingly to do the same to our fellow human beings when what they are saying seems too convoluted or uninteresting to lend an ear to.

Recognizing that I show some of the symptoms of the disease of not listening—impatience, a low threshold for boredom, and the journalist's irritation when speakers don't provide a "lead paragraph" or a clear focal point, or when they engage in the sort of self-indulgent long-windedness that Benjamin Disraeli described as tracing the steam engine always back to the kettle—I was delighted to encounter Mortimer J. Adler's book, *How To Speak, How To Listen*.

Adler says that it is utterly amazing how people generally assume that the ability to listen well is a natural gift requiring no training. He says that of the four elements in communication—listening, speaking, reading, and writing—listening is learned first, is used most through life, and is taught least through all the years of schooling. Deficiencies in listening and the ensuing failures in communication, says Adler, are a major source of wasted time, ineffective operation, miscarried plans, and frustrated decisions.

Adler lists some of the bad habits that interfere with proper listening: paying more attention to a speaker's mannerisms than to what is being said, appearing to pay attention while allowing one's mind to wander, overreacting to certain words or phrases that arouse adverse emotional responses, or just day-dreaming. Listening, Adler believes, requires penetrating through the words to the thoughts that lie behind them. It calls for sifting what's important from what isn't; it requires perceiving as early as possible the focus of what is being said.

It could be argued, I suppose, that if people spoke more logically and grammatically and colorfully than most of us do, listening would be easier. But that's rather like saying that astronomy would be more rewarding if there were never any clouds.

Philadelphia Inquirer columnist Lona O'Connor lists three types of listening: supportive—making speakers comfortable enough to state what's on their mind; active—asking questions and advancing the conversation; and analytic—figuring out what the information means and what to do about it.

O'Connor adds bluntly: "Can you improve your listening skills? You'd better. Your future could depend on it." This is especially true for health care professionals who, by turning an intentionally deaf ear to

what's being said or by failing to detect nuance, may place their careers in jeopardy. It's estimated that more than half of all malpractice litigation has its origins in garbled communication and misunderstanding.

So, for improved patient care and decreased risk of litigation, let's hear it for sharper listening. It's an exercise in preventive medicine—and certainly better than the Bard's cure. ○

"It's estimated that more than half of all malpractice litigation has its origins in garbled communication and misunderstanding."

Mr. Woods, former editor and publisher of the *Canadian Medical Association Journal*, is president of *Healthcare Media International, Inc.*, Philadelphia, and a frequent commentator on health care issues.

ou're on solid ground with
the Dodson Plan.

More than 75 years ago, Bruce Dodson, Sr. pioneered the concept of the dividend plan for workers' compensation insurance. Dodson Group has been helping businesses like yours save on premium costs ever since.

The Dodson Plan gives you the opportunity to earn a dividend each year, depending on the claim experience of all insured members. We carefully select those who participate, creating the greatest potential for you to save.

Pennsylvania Medical Society endorsed the Dodson Plan in 1973. Since then, participating members have earned a total of **\$2,309,240** in dividends. Share in the savings!

You're on solid ground with Dodson.

The Great Health System Reform Myths of the 1990s

AMA Center for Health Policy Research

The 1990s have seen a sustained political effort to "reform" the U.S. health care system. Agitation for system reform began during the Bush administration, which downplayed its political importance. Bill Clinton, however, made health system reform a cornerstone of his campaign for election and introduced a reform bill in September 1993. Most reform energy was then focused on the attempts of Congressional Democrats to modify the Clinton approach and develop a reform bill that could be passed. These efforts failed, and health system reform was pronounced dead on September 26, 1994, by Senator Mitchell.

Throughout this period, the health system reform debate has been permeated by naive political assumptions, foolish expectations, and economic falsehoods. The most important of these health system reform myths are described below.

Myth No. 1: Eliminating Inefficiency and Waste Can Save a Bundle. Much of the Clinton bill's budget impact projections were based on estimated savings from reducing administrative cost of the system. In general, it is thought that in addition to administrative cost, substantial savings could be gained through eliminating "unnecessary" or "ineffective" medical care.

It is easy for an outside observer to see inefficiency in any physical or social process. But to do something about it is another matter entirely. It is as likely that the delivery of medical care could be re-engineered to eliminate waste as it is that internal combustion engines, which waste a substantial portion of the heat energy they produce, could quickly be re-engineered to produce significant gains in efficiency.

One problem is that technological progress is rapid in the medical field. While it eliminates inefficiency, it also introduces new inefficiencies at the same time. Over the past 10 years, shifting a major portion of

expensive medical care from inpatient to outpatient settings, introduction of non-invasive diagnostic procedures, and less-invasive surgical techniques have increased efficiency. At the same time, many new products may be used less than optimally at the time of their initial introduction until their effects and indications are known more completely through information accumulated through their use.

Schwartz and Daniel catalogued estimates of potential cost savings from all sources analyzed in the literature to determine the maximum possible cost savings that could be achieved between 1994 and the year 2000. They concluded that if all possible savings from eliminating waste and inefficiency in the hospital, physician, and pharmaceutical sectors of the industry were realized, the real rate of expenditure growth would be reduced only 1.6 percentage points annually.¹

Myth No. 2: Managed Care Can Control Health Expenditures.

Managed care is the cornerstone of all comprehensive reform proposals, which attribute substantial cost-savings to increasing the percentage of the population enrolled. Unfortunately, the Congressional Budget Office has determined that on average, HMO cost is only four percent less than traditional fee-for-service, and there is no evidence that HMOs reduce the rate of cost growth.²

Even this small cost advantage of HMOs does not appear to extend to other forms of managed care. Although many have tried, no credible research study has been able to document that managed care, defined broadly, generates savings or lower premiums relative to other plans for the same population groups. The General Accounting Office reports that it has failed to find that managed care definitely saves employers money.³

Myth No. 3: Competition Between Health Plans Can Control Cost. "Managed competition" among health plans is the cost-control cornerstone of many proposals. However, competition between health plans is not the kind of competition that brings prices into decision making. Rather, once enrolled in a health plan, consumers face only a token marginal cost for consuming benefits. Similarly, their choice of health plans among those offered by their employer is only a small fraction of the actual cost.

In the absence of meaningful prices, competition among health plans takes the form of non-price competition. Health plans compete on the basis of the extent of benefits and other factors such as convenience and location. Further, HMOs may capitalize on the adverse selection of older, less healthy employees, which drives up traditional insurance rates by pricing just below those rates, resulting in higher overall costs to employers. Feldman et al. have documented that firms offering an HMO pay higher average premiums than those that do not in the highly competitive Minnesota market.⁴

Myth No. 4: Prevention of Illness and Disease Reduces Health Expenditures.

This persistent myth has great intuitive appeal and is the basis of arguments by special interests for including preventive services as a basic insurance benefit. However, prevention seldom works in practice to save money. Rather, prevention typically costs more money than it saves. A recent summary notes that the most widely practiced forms of prevention—control of high blood pressure and high cholesterol, screening for cancer (cervical and colorectal), vaccination for influenza and pneumonia—add far more to national health expenditures than they save.⁵

The fact that most prevention costs more than it saves does not, however, mean that it has no value. There are

other, more legitimate ways of judging whether prevention is "worth it." For example, if people are willing to pay with their own money, then prevention is clearly a legitimate private expenditure. From the social viewpoint, the most important goal of prevention is not necessarily to save money, but to achieve a higher level of health or well-being in the population. On these grounds, much prevention may be justified if it is the best way to accomplish this social objective.

Myth No. 5: Health Benefits' Burden Damage Businesses' Competitiveness. This assertion contains two myths that can be dispelled. First, workers, not employers, pay for their health care; it is part of their total compensation that would be the same if they were paid in chickens, health care, or cash. Even though spending on health care has grown as a percentage of gross domestic product (GDP), total compensation as a percentage of GDP has been the same (about 60 percent) since the end of World War II. Workers prefer some of their compensation to be paid in health care benefits rather than money because fringe benefits are excluded from their taxable income.

Second, the health expense *burden* on business has been highly exaggerated. IRS data show that total cost of fringe benefits is less than two percent of total corporate deductions from gross income.⁶ It's the same for partnerships and proprietorships. If cost reduction and increased efficiency are the objectives, there are a lot bigger expense items to pursue than fringe benefits.

Myth No. 6: We Can Adopt the Model of Successful Foreign Systems. Many proposals for a centralized health care budget and payment system are modeled on foreign health care systems, such as those of Canada and Germany. However, international comparisons of data show that no country has achieved the goal of providing universal access simultaneously with satisfactory cost containment. Most OECD (Organization for Economic Cooperation and Development) countries, particularly those with global budgets and/or price controls, still have medical price inflation in excess of their consumer price indexes and rates of per capita expenditure growth in excess of per capita GDP, as does the U.S.⁷

Much of the excess production of health care in the U.S. relative to other countries is explained by extra spending due to the unusual extent of this country's social problems.⁸ In terms of efficiency, however, when international comparisons are made on the basis of estimated *opportunity cost* rather than spending, the U.S. comes out in the bottom half of comparable western economies.⁹ Nevertheless, because the prices people pay in making medical care decisions are much less than the resource costs in systems that control prices or subsidize consumption, there is significant excess consumption and inefficiency loss. The inefficiency or dead weight loss to the U.S. economy has been estimated to be as high as \$109 billion in 1984, or 28 percent of U.S. health expenditures.¹⁰ The loss is probably much more in countries where health care is *free*.

Myth No. 7: X Percent of GDP is Too Much to Spend on Health Care. The health care problem is often described in terms of the percent of GDP that health care "consumes." Projections of health spending growth often conclude that spending on health will consume all of GDP if the rate of increase is not capped.

This view of the health care cost problem seems to rest on the supposition that there is a limited amount of GDP to distribute among alternative uses, and that if spending on health increases, something else must decrease, so that at some point everything is devoted to health care. In fact, GDP is not a limited pie that is cut up into pieces and passed out. Rather, GDP is the sum of spending on all final goods and services produced in a year. Thus, to speak of health care as "consuming" our GDP is inaccurate.

It is also an inaccurate portrayal of trade-offs implied in producing the components of GDP. Because spending on health care as measured by percentage of GDP is not an indicator of the real opportunity cost of producing it, economists have attempted to measure the cost of health care to the economy in other ways. Those of Feldman, Dowd, and Pauly were discussed above.

Myth No. 8: Health System Reform Is Politically Feasible. This turned out to be the greatest myth of all. Anyone who has followed the

debate, which has been emerging intermittently among the same group of economists, social reformers, and Congressional leaders since the late 1960s, can see that the fundamentals for consensus on a politically feasible approach to reform were absent in 1994. There were too many strongly held and unalterable differing opinions about the nature of our health system problems to afford the political compromise necessary for passage of a reform bill in Congress.

STATS

Federal health officials reported in November 1994 that medical inflation in 1993 was the lowest in seven years. The Health Care Financing Administration says Americans spent an average of \$3,299 apiece on health care in 1993—\$205 more than in the previous year. The 7.8 percent increase over 1992 amounted to the slowest rate of increase since 1986 and was the third lowest since 1960.

Hantavirus Pulmonary Syndrome Is Here

*Maria E. Moll, MD
Bonnie L. Krampe, MPH*

A 61-year-old man became ill in Pennsylvania while hiking the Appalachian Trail last summer; he has been retrospectively diagnosed with Hantavirus Pulmonary Syndrome (HPS). In June 1993, HPS was first identified in the United States in the Four Corners (New Mexico, Arizona, Colorado, Utah) area, after patients presented with unexplained ARDS. Since then, 98 cases have been identified in 21 states. Until the present, only three have been east of the Mississippi River, including one each in Indiana, Florida, and Rhode Island. The case last summer in the commonwealth is the first to be diagnosed with HPS in the mid-Atlantic states.

The man began hiking the trail in Georgia in April 1993, and traveled through Virginia and into Pennsylvania by June. After a five-day history of fever, chills, headache, myalgia, nausea, vomiting, and diarrhea, he was hospitalized with hypotension and acute respiratory distress syndrome (ARDS). Bilateral diffuse infiltrates were visible on the chest radiograph. He recovered after a stormy and prolonged hospital course, during which he required respiratory and circulatory support and hemodialysis.

Two acute serum samples revealed elevated immunoglobulin M titers for Sin Nombre virus (SNV) by enzyme-linked immunosorbent assay.[†] A third serum sample obtained a year later revealed an elevated SNV-specific immunoglobulin G titer.

This patient reported a typical prodromal illness which progressed to respiratory and renal failure. Hemorrhagic fever with renal syndrome (HFRS) is characteristic of the hantavirus infections in Eurasia, and renal failure has not been a prominent feature in most of the U.S. cases. Only in two cases from the southeastern United States has the renal syndrome been previously described. More recent specific antibody testing has indicated that these cases were associated with two

other recently identified hantaviruses, provisionally named Black Creek Canal virus and Bayou virus. Also unique to this case were the markedly elevated transaminase levels (peak AST of 8500 U/L). Liver involvement has also not been typically described in the HPS, but has been reported with HFRS.

Clinical screening criteria have been developed by the Centers for Disease Control and Prevention (CDC) in consultation with the Council of State and Territorial Epidemiologists (see box, below). Use of these criteria identifies individuals with illness similar to the confirmed HPS cases from the Four Corners area. Confirmation of the diagnosis is made by submission of serum specimens for antibody testing, or tissue specimens for polymerase

chain reaction (PCR) for hantavirus ribonucleic acid, or for immunohistochemistry for hantavirus antigen.

Currently, there is no known treatment for HPS, beyond intensive supportive care. The investigational antiviral drug, ribavirin, has been available since June 1993 through a CDC-sponsored, open-label protocol for patients with HPS. This protocol closed to further enrollment on September 1, 1994. Ribavirin was well tolerated, but had no clearly beneficial effect on the clinical course of the illness. However, plans are in progress to begin placebo trials in early 1995.

Although the patient was hospitalized in Pennsylvania, he spent the majority of the suspected two- to six-week incubation period hiking the

Screening Criteria for Hantavirus Pulmonary Syndrome in Persons with Unexplained Respiratory Illness

Potential case-patients must have one of the following:

- ☐ a febrile illness (temperature $\geq 101^{\circ}\text{F}$ [$\geq 38.3^{\circ}\text{C}$]) occurring in previously healthy person characterized by unexplained adult respiratory distress syndrome, OR bilateral interstitial pulmonary infiltrates developing within one week of hospitalization with respiratory compromise requiring supplemental oxygen; or
- ☐ an unexplained respiratory illness resulting in death in conjunction with an autopsy examination demonstrating noncardiogenic pulmonary edema without an identifiable specific cause of death.

Potential case-patients are to be excluded if they have any of the following:

- ☐ a predisposing, underlying medical condition (e.g., severe underlying pulmonary disease, solid tumors or hematologic malignancies, congenital or acquired immunodeficiency disorders, medical conditions [e.g., rheumatoid arthritis or organ transplant recipients], requiring immunosuppressive drug therapy [e.g., steroids, cytotoxic chemotherapy]); or
- ☐ an acute illness that provides a likely explanation for the respiratory illness (e.g., recent major trauma, burn, or surgery; recent seizures or history of aspiration; bacterial sepsis; another respiratory disorder such as respiratory syncytial virus in young children; influenza; or legionella pneumonia).

Confirmed case-patients must have both of the following:

- ☐ at least one specimen (serum and/or tissue) available for laboratory testing for evidence of hantavirus infection, and
- ☐ in a patient with compatible clinical illness, either serology (presence of hantavirus-specific immunoglobulin M or rising titers of immunoglobulin G), polymerase chain reaction for hantavirus RNA or immunohistochemistry for hantavirus antigen is positive.

Source: MMWR, October 28, 1993, pp. 816-820

Appalachian Trail and surrounding areas in Virginia. Thus, the focus of the investigation for the etiology of the infection is in Virginia. The habitat of the principal rodent reservoir for this virus, *Peromyscus maniculatus*, the deer mouse, extends throughout much of the contiguous United States, except the southeast. However, more than 16 different rodent species, including rats, mice, and voles, are known carriers of hantaviruses. Infected rodents have no signs of infection; yet, they can shed the virus in their saliva, urine, and feces, and can transmit it to people and other rodents.

People acquire infection most often by inhalation of aerosolized rodent excreta. The virus can also be transmitted by handling rodents or contaminated materials and then touching the nose or mouth. A rodent's bite can also spread the virus. There has been no evidence of person-to-person transmission.

At least two fact sheets about the hantavirus are available through the CDC: "Hantavirus Illness in the Southwest" (document 310032) is a short summary of the illness and its transmission by rodents.

"Hantavirus Infection—Southwest United States" (document 310031) is a more extensive report providing interim recommendations for prevention and control of hantavirus infections.

To receive either of these documents, call the CDC FAX Information Services at (404) 332-4565, and follow the prompts. These documents, copies of the latest *MMWR* articles concerning hantavirus, the clinical screening criteria, the case report form, and the laboratory submission form are also available from your local or county health department, or from the Division of Communicable Disease Epidemiology, Pennsylvania Department of Health, Harrisburg, (717) 787-3350.

† *SNV*, the strain of hantavirus formerly known as *Muerto Canyon virus*, was responsible for the outbreak of *HPS* in the Southwest.

Dr. Moll is assistant state epidemiologist and Ms. Krampe is program administrator, Division of Communicable Disease Epidemiology, Pennsylvania Department of Health, Harrisburg.

NATIONAL PROGRAM TARGETS SHINGLES SUFFERERS

The National Foundation for Infectious Diseases in November kicked off a national campaign to educate Americans about the need for early treatment of shingles, which is critical in reducing the duration of long-term pain that can last for weeks, months, or years after shingles occurs.

As part of the program, entitled "STOP—Screening and Treatment to Overcome Pain," free shingles screenings were offered in November at the Hospital of the University of Pennsylvania. Also, through a national bus tour, the foundation will distribute brochures and flyers at senior centers, malls, parks, and other locations where older citizens gather. Philadelphia health officials, senior centers, volunteers, and physicians will also help distribute information directly to older residents to ensure they learn about the early signs of shingles.

For more information on the program, call the foundation at (301) 656-0003.

LEGAL GUIDE PUBLISHED FOR HIV-INFECTED WORKERS

The American Association of Physicians for Human Rights (AAPHR) has published a 47-page, question-and-answer legal guide for HIV-infected health care workers.

"The Legal Rights and Obligations of HIV-Infected Health Care Workers" examines the many legal ramifications of being HIV positive and a health care worker. Included is information on employment discrimination, state policies on HIV-infected health care workers, informed consent law, privacy and confidentiality, and insurance issues.

The guide, priced at \$5 for AAPHR members and \$10 for nonmembers, is available from AAPHR, 273 Church Street, San Francisco, CA 94114.

NEW GUIDELINES SAY INACTIVITY BAD FOR BACK

Clinical practice guidelines released in November by the Agency for Health Care Policy and Research (AHCPR) recommend treating most acute, painful low-back problems with nonprescription painkillers and mild exercise such as walking or swimming, followed by conditioning exercises in about two weeks.

Most adults suffer from acute low-back problems at some time in their lives. Many patients traditionally have been confined to bed, sometimes in traction. But the guidelines, developed under the agency's auspices by a private-sector panel of experts and consumers, and tested in clinics and doctors' offices before their release, say inactivity can weaken needed muscles. The guidelines reassure people with these acute episodes that nine of 10 will recover on their own within a month.

Philip R. Lee, MD, assistant secretary for health and director of the Public Health Service, U.S. Department of Health and Human Services, said in releasing the guidelines, "By encouraging people with acute low-back problems to resume normal activities, using only those treatments that have been scientifically shown to be effective, these guidelines could save Americans considerable anguish, time, and much money now spent on unneeded or unproved medical care."

"Up to 80 percent of Americans will have had a low-back problem of some type at least once by age 50," Dr. Lee added. He also said that low-back problems are second only to the common cold in reasons for visiting family or other primary care doctors.

Free copies of "Acute Low-Back Problems in Adults: Assessment and Treatment, Quick Reference Guide for Clinicians" are available by calling AHCPR's Publications Clearinghouse at (800) 358-9295 or AHCPR's Instant Fax at (301) 594-2800.

AMA GUIDELINES HELP ASSIST PEOPLE WITH DISABILITIES

The AMA has released guidelines that will help physicians use new assistive technology—devices and services that will improve quality of life for the nearly 50 million Americans with disabilities.

The "Guidelines for the Use of Assistive Technology: Evaluation, Referral, Prescription" will serve as a quick reference for primary care physicians who are responsible for prescribing assistive devices and services for their patients with disabilities.

They are available for \$5 each or 25 copies for \$100 from the AMA's Department of Geriatric Health, 515 North State Street, Chicago, IL 60610.

Another New Language to Learn

Donald E. Harrop, MD

The "ABCs" of medicine are ever-changing. Here, the president of the Keystone Peer Review Organization reviews the latest trends in peer review acronyms.

Back in June 1993, I wrote a sort of spoof in this column on the new acronyms and terms we would all have to learn in order to survive under some of the then-proposed health system reform legislation. When Congress failed to pass a reform bill in 1994, all of that was put on hold—at least for the remainder of the year.

If reform ever does come to pass, it will probably be presented in a whole different package, so all those acronyms and terms will most likely change again. That's why I'm glad I didn't really try too hard to learn them. Besides, I'm already having enough fun trying to learn a whole new terminology which stems from the Health Care Quality Improvement Program (HCQIP) under the Fourth PRO Scope of Work.

For example, even the program title changed since it was first introduced: It started out to be HCQII—the last "I" stood for "initiative," but was changed to "P" as in "program." In fact, some of the other acronyms we got to know now have different meanings than they did before.

It made me think that it might be helpful if I provide a brief glossary of some of these new terms, since they are now in use by peer review organizations and the Health Care Financing Administration (HCFA) on a daily basis. Who knows, if we can get them memorized, we may start using them in our routine conversations. Here are a few of the ones most frequently used:

CCP—Cooperative Cardiovascular Project: A national cooperative project which will collect and abstract data on 100 percent of Medicare patients hospitalized during an eight-month period, for acute myocardial infarction. The purpose of the project is to improve processes and

outcomes of care. The eight months include January through August 1994.

CDAC—Clinical Data Abstraction Center: Two CDACs under contract to HCFA will request, receive, and abstract medical records from all Medicare provider hospitals in the nation. These data will eventually be used by the individual PROs for analysis and cooperative project implementation.

Local Cooperative Project: A collaborative effort initiated by a PRO, which involves hospital medical staffs and administration, for the purpose of improving processes and outcomes of care.

MQIS—Medicare Quality Indicator System: This is the software which will be used by the CDACs to abstract cases using computers. It is a system of indicators of the quality of care provided to Medicare beneficiaries. It does not mean or relate to criteria, standards, or practice parameters.

National Cooperative Project: A collaborative effort initiated by HCFA which involves all PROs in all states, as well as hospital medical staffs and hospital administrations, for the purpose of improving processes and outcomes of care.

Patterns of Care: The findings resulting from data analysis conducted to identify the frequency and distribution of conditions, types of care delivered, and outcomes. These analysis efforts may provide information about possible areas in which PROs can help physicians/providers improve the quality of care delivered to Medicare patients.

PDC: This one has gone through the mill. Under prior PRO Scopes of Work, it stood for "premature discharge." Under HCQIP, it started out as our Project Development Committee. It now means Project Data Collection, which is the process of collecting particular data for a specific cooperative project from medical records.

PEC—Project Evaluation Committee: This is a standing committee comprised of KePRO's HCQIP staff, education specialist, and our consulting biostatisti-

Dr. Harrop is president of the Keystone Peer Review Organization.

cian who evaluate potential projects for feasibility and need, and who provide ongoing advice and evaluation of the projects from start to completion.

Steering Committees: These were originally called "master committees" but HCFA, many of the PROs, and some members of these committees, decided they did not like the name. These committees provide input and suggestions on subjects for cooperative projects for PROs to consider, and advise whether proposed projects appear to have merit and meet the basic requirements such as potential to improve quality, prevalence of the problem, and whether the basic premise is supported by the literature or practice parameters. These committees are vital in guiding PRO staffs in a direction that will be well received by providers.

These are a few of the new terms and acronyms you will probably hear most about from the PROs during the foreseeable future. I certainly wasn't serious about your trying to remember any of these, but I also think it wouldn't hurt to be familiar with some of them. ☺

Why Do 60,000 Doctors Trust Us With Their Professional Reputations?

In an era of "not if, but when" a doctor will be accused of malpractice, your choice of professional liability coverage is extremely important. We know that *any* allegation can be devastating to both your professional reputation and your personal assets... making the company you choose critical to your future well-being. Many factors should be taken into account when making a decision.

Consider our financial strength and stability. We are rated A+ (Superior) by A.M. Best and AA (Excellent) by Standard & Poor's. No other company with an exclusive focus on the needs of the health care community has higher financial ratings.

Look at our experience. For nearly a century we have specialized in defending and protecting doctors. No other company has **successfully defended** more than 180,000 malpractice claims.

Local service is important, too. Our General Agents and Field Claim Managers work with you on every allegation. They average more than 15 years experience working with doctors and the legal system.

Why do more than 60,000 doctors trust their professional reputation and personal assets with us? No other company combines nearly a century of experience with financial strength and the local service provided by The Medical Protective Company.

BLUE SHIELD ESTABLISHING SERVICE ORGANIZATION

Pennsylvania Blue Shield's board of directors has approved a for-profit subsidiary to establish an insurer-physician service organization (IPSO).

Because there are a number of regulatory and legal matters that must be resolved first, Blue Shield's short-term strategy is to engage in what it calls "option-based exclusive contracting," in which a physician commits to joining the IPSO, agrees not to sell his or her practice, and agrees not to join or form a competing alliance. The practice must have the capacity to provide for Blue Shield patients.

Initial outlines of the plan call for physicians to be part-owners of the IPSO without any up-front fee. Physicians would receive a portion of the profits but, at least during the first few years, risk would be borne by Blue Shield and not by the physicians.

The option-based exclusive contracting is already underway in Lancaster and some other Central Pennsylvania counties. It is the Society's understanding that this effort will not move into the Pittsburgh area.

In the long run, the strategy is also to provide other services such as billing, practice management services, data development for outcomes measures and clinical protocols, marketing, contract negotiations, and systems development.

The Society is closely monitoring the development of this new Blue Shield effort and has met with Blue Shield officials to learn more about their plans.

MEDICARE NEWS

CARRIER NAME CHANGE EFFECTIVE THIS MONTH

Pennsylvania Blue Shield's Medicare Part B unit on January 1, 1995, began operating under a new name—Xact Medicare Services. The change was made to "distinctly mark it as the Medicare carrier in your area," Blue Shield says. Also, the name change places a "renewed emphasis" on customer service by the Health Care Financing Administration (HCFA) and Blue Shield.

Though all Medicare Part B materials going to providers and beneficiaries in Pennsylvania,

Delaware, New Jersey, and the District of Columbia metropolitan area will bear this new name, several aspects of the program remain unchanged: Pennsylvania Blue Shield will continue to administer the Medicare program, and phone numbers, locations, and staff will not be changed.

In the past, HCFA emphasized the number of claims carriers processed and how quickly. Now, Blue Shield says, HCFA has begun to focus on customer service. Blue Shield is responding by emphasizing accuracy, detail, and precision service to Medicare providers.

Through newly created programs, Xact will: provide customer service training to employees, work to enhance provider access to Medicare information through computer and phone hook-ups, solicit provider input to make development and inquiry letters easier to read and friendlier, and streamline the appeals process for health care professionals.

AMA ANALYSIS PROVIDES REALITY CHECK ON HMOs

Jonathan Weiner in *JAMA* (July 20, 1994) forecasted that by the year 2000, up to 60 percent of the U.S. population would be enrolled in health maintenance organizations (HMOs), resulting in a surplus of 165,000 patient-care specialist physicians if some particular HMO staffing levels prevailed. Since only 16 percent of the U.S. population is currently covered by HMOs, Weiner's forecast assumes that the proportion of the population covered by HMOs will be driven up as much as 44 percent in the next six years.

Current efforts to increase HMO coverage are not new; past programs have aggressively encouraged HMO expansion and have forecasted tremendous success. In reading Weiner, one is reminded of similar, previous forecasts regarding the growth of HMOs and impending physician surpluses. Comparing predicted versus actual events may provide a reality check on such forecasts:

- In 1973, Congress passed a law requiring certain employers to offer a federally qualified health plan to their employees, and providing grants and loans to encourage HMOs. At that time, it was expected that by 1990, 90 percent or more of all Americans

would be enrolled in HMOs. In actuality, by 1990, 13.6 percent were.

- Legislation enacted in 1985 permitted HCFA to develop risk contracts with HMOs on a nationwide basis to encourage HMOs to provide Medicare coverage for fixed premiums. Under the program, the proportion of Medicare beneficiaries enrolled in HMOs increased from 1.6 percent in 1986 to 4.8 percent in 1993, according to an article in *Health Care Financing Review* (Fall 1993).

- In 1980, the Graduate Medical Education National Advisory Committee forecasted a surplus of 70,000 physicians by 1990 and 145,000 in the year 2000. Yet, 1990 came and went without complaints of a physician surplus. The continued output of physicians has been absorbed by the market without the appearance of any of the objective signs of surplus that economists usually cite. The falling relative earnings of several primary care specialties seen in the 1980s has reversed in the '90s, while the real incomes of other specialties rise or remain steady.

The market share performance of HMOs relative to initial expectations leads one to question the credibility of current optimistic assumptions about their future enrollment. Government encouragement of private sector HMO growth and Medicare beneficiary enrollment in HMOs has not produced success in terms of expectations and desires. Other evidence suggests that not all patients are comfortable with the type of care management used by HMOs, and the preservation of long-term physician-patient relationships will continue to be a key element in consumer choices as long as options are available.

It is just as unlikely that we will wake up at the beginning of the year 2000 in the midst of a surplus of tens of thousands of physicians and a ubiquitous prevalence of HMOs as it was when we woke up on January 1, 1990. Our real world experience of the past several decades should cause us only to yawn at projections of radical change—especially those that rest on assumptions of extensive re-engineering of the health care system.

Excerpted from an article by Jesse S. Hixson of the AMA's Center for Health Policy Research. For a complete copy of the article, call PENNSYLVANIA MEDICINE at (800) 228-7823 or (717) 558-7750.

YOCON[®]

YOHIMBINE HCl

Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalamic centers and release of posterior pituitary hormone.

Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon[®] is indicated as a sympatholytic and mydriatic. It may have activity as an aphrodisiac.

Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.^{1,2} Also dizziness, headache, skin flushing reported when used orally.^{1,3}

Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.^{1,3,4} 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to 1/2 tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.³

How Supplied: Oral tablets of Yocon[®] 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

REPORTING THE HIGHEST RATES OF, AND ADDRESSING THE UNDERUTILIZATION OF, BREAST-CONSERVING SURGERY WITH RADIATION THERAPY AMONG WOMEN WITH STAGE TIS, I, OR II BREAST CANCER

Mary Lou Patton, MD, FACS; Timothy J. Germain, BS; Linwood R. Haith Jr., MD, FACS

OBJECTIVE: The National Institutes of Health consensus panel in 1991 concluded that "breast conservation treatment, with axillary dissection and radiation therapy, is an appropriate method of primary therapy for the majority of women with stage I and stage II breast cancer and is preferable because it provides survival rates equivalent to those of total mastectomy and axillary dissection while preserving the breast." Despite this supporting clinical evidence, the overall rate of acceptance and actual practice of breast-conserving surgery with radiation therapy (BCS) has remained low. We present the highest rate of BCS to be performed on women with stage TIS, I, or II breast cancer, without additional rates of recurrence.

METHODS: Over the past six years, from mid-1987 to mid-1993, we treated 178 cases of Stage TIS, I, or II breast cancer in women. We retrospectively and concurrently reviewed the records of all patients diagnosed with stage TIS, I, or II breast cancer, and found 24 cases (13.5 percent) were stage TIS, 50 cases (28 percent) were stage I, and 104 cases (58.5 percent) were stage II. Tumors were staged according to the criteria of the American Joint Committee on Cancer.

The patients were all women, averaging 61 years of age (range 28-91). We considered a number of factors, including: race; height; weight; marital status; family history of cancer; alcohol, tobacco, or hormone use; menstrual status; and cholesterol levels. In addition, we studied correlations of important tumor factors, including size, location, micro-histological features, nodal status, tumor receptor status, and forms of adjuvant chemo-, radiation, and hormonal therapies used.

Treatment of breast cancer was done in a staging, two-step process, with a review of tumor factors and recommendation from a multi-

disciplinary approach, leading to a well-informed patient decision. BCS was defined as "lumpectomy" with normal surrounding tissue (partial mastectomy), all with or without nodal dissection. Mastectomies were defined as simple and modified radical. Patients were not considered candidates for BCS if they presented with multi-centric tumors in separate quadrants, gross multi-focal disease, diffuse micro-calcifications, or extensive intraductal carcinoma (EIC).

RESULTS: We present the highest rate of BCS to be reported, and the only study where a majority, 53 percent, of all cases of stage TIS, I, or II breast cancer received conservative treatment. The individual breakdown showed that 70 percent of stage I, 50 percent of TIS, and 46 percent of stage II tumors, were treated with BCS. According to the criteria detailed above, 75 cases were not considered candidates for BCS and underwent mastectomy.

In all, 103 of 178 cancers (57.8 percent) were candidates for conservative treatment, and 94 of these 103 cancers (91.3 percent) eventually chose BCS over mastectomy. Follow-up, ranging from six months to six-and-a-half years, has shown no local recurrence in any of our patients receiving BCS. In addition, 32 of 79 women undergoing mastectomy received breast reconstruction.

DISCUSSION: Recent studies have begun to address the factors causing an under-utilization of BCS performed on women with early-stage breast cancer. Numerous clinical studies have shown that BCS is preferable to mastectomy, as it does not sacrifice the breast or place the patient at increased risk of recurrence, but does improve her quality of life and self-image after surgery.

Despite this, the rate of BCS has not seen widespread national expansion and acceptance, perhaps due to physician bias or uninformed patients. Through our multi-disciplinary panel approach, we are able to give patients the appropriate

recommendation and information, leading to a well-informed patient choice. We performed the highest rate of BCS reported for stage TIS, I, and II breast cancers.

CONCLUSION: Amidst all the recent controversy in the study of breast cancer treatments, we believe BCS produces equivalent rates of morbidity and recurrence as mastectomy, and that BCS is preferable because it can preserve the breast for the majority of women who present with stage TIS, I, or II breast cancer.

For additional information or a complete copy of the study, contact Mary Lou Patton, MD, FACS, at Surgical Care Associates, Crozer-Chester Medical Center, (215) 876-3540.

The editors of PENNSYLVANIA MEDICINE encourage submission of scientific articles for publication consideration; however, abstracts of those articles not published in full are printed as a reference for readers.

Generally, clinical studies, trials, and observations including large numbers of patients or other types of papers of widespread medical interest are published as soon as possible. Papers dealing with limited numbers of patients and dealing with a narrow clinical medical focus are abstracted.

Please send submissions to:
Medical Editor
PENNSYLVANIA MEDICINE
777 East Park Drive
P.O. Box 8820
Harrisburg, PA 17105-8820

Full scientific articles are published at the discretion of the medical editor as consistent with the editorial schedule and are subject to revision.

The Philadelphia Heart Institute at Presbyterian Medical Center is an affiliate of the University of Pennsylvania.

**Presbyterian Medical Center designates this continued medical education activity for 2 credit hours in Category 1 of the Physicians' Recognition Award of the American Medical Association and the Pennsylvania Medical Society membership requirement. Nine sessions, 18 credits.*

The Presbyterian Medical Center of Philadelphia is accredited by the Pennsylvania Medical Society to sponsor continuing medical education for physicians.

All faculty participating in continuing medical education programs sponsored by Presbyterian Medical Center of Philadelphia are expected to disclose to the program audience any real or apparent conflict(s) of interest related to the content of their presentation(s).

Dr. Rhoads

Jonathan E. Rhoads, MD—professor of surgery, university provost emeritus, former John Rhea Barton professor, and chairman of surgery, University of Pennsylvania Medical Center, Philadelphia, and

a past recipient of the State Society's Distinguished Service Award—authored the article, "M memoir of a Surgical Nutritionist," which appeared in the September 28, 1994, issue of *JAMA*.

Stephen F. Conti, MD, chief, Division of Foot and Ankle Surgery, University of Pittsburgh Medical Center, has authored several book chapters in the publication *Rehabilitation of the Foot and Ankle* by Mosby. Also, Dr. Conti was elected to the Board of Certified Podiatrists' as medical adviser and has been named associate editor of the journal, *Foot and Ankle International*.

Nick M. DiGiovine, MD, medical director, Pittsburgh Center for Sports Medicine, Shadyside Hospital, Pittsburgh, was named a fellow of the American College of Surgeons.

Myles D. Greenberg, MD, an emergency medicine specialist from Pittsburgh, was honored with the Best Resident Presentation award at the annual meeting of the National Association of Emergency Medical Services Physicians.

Joseph F. Novak, MD, has received the Outstanding Humanitarian Award of the American Academy of Ophthalmology. Dr. Novak was recognized for his leadership in preventing blindness in the industrial workplace.

Gary Aaronson, DO, chief of pulmonary diseases, Frankford Hospital, Philadelphia, was elected president elect of the hospital's medical staff.

The Graduate Hospital, Philadelphia, has named **James L. Weese, MD**, chief, oncologic surgery, to a three-year appointment as cancer liaison physician.

S. Philip Bralow, MD, Division of Gastroenterology, Graduate Hospital,

Philadelphia, was selected to receive a Mastership of the American College of Gastroenterology by the college's board of trustees. He was awarded the mastership for his stature and achievement in gastroenterology and teaching, and for his contribution to the college in service, leadership, and education.

Albert Einstein Medical Center, Philadelphia, has appointed **Leonard A. Brody, MD**, as associate chair, Department of Orthopedic Surgery.

Joseph A. McCadden, MD, Wallingford, retired staff vice president and corporate medical director of Scott Paper Company, was recognized for 32 years of membership in the American Academy of Family Physicians.

David E. Longnecker, MD, Robert Dunning Dripps professor and chair, Department of Anesthesia, and **Jerome F. Strauss III, MD, PhD**, professor of obstetrics and gynecology and director, Center for Research on Women's Health and Reproduction, University of Pennsylvania Medical Center, Philadelphia, were elected to the Institute of Medicine of the National Academy of Sciences.

Donald Kaye, MD, president and chief executive officer, Medical College of Pennsylvania and Hahnemann University Hospital, Philadelphia, was awarded the Distinguished Achievement Award from the New York Hospital-Cornell Medical Center Alumni Council for his outstanding services rendered in the field of medicine. Dr. Kaye also received the Emilio Ribas Medal from the Brazilian Infectious Disease Society for his distinguished service in the field of infectious diseases.

Joel I. Polin, MD, chairman, Department of Obstetrics and Gynecology, Abington Memorial Hospital, Abington, was elected vice chairman of the Residency Review Program Committee for Obstetrics and Gynecology.

Sydria Klein Schaffer, MD, assistant professor of clinical medicine, Medical College of Pennsylvania and Hahnemann University, Philadelphia, was awarded the first U.S. Healthcare Quality Management Fellowship.

Steven J. Brown, MD, Media, was appointed associate medical director, Health Service Department for Greater Atlantic Health Service, Philadelphia.

St. Christopher's Hospital for Children, Philadelphia, has appointed **Julian Allen, MD**, chief, Section of Pediatric Pulmonology. Also, **Daniel V. Schidlow, MD**, was appointed senior vice president for clinical affairs and senior vice chair, Department of Pediatrics, Medical College of Pennsylvania and Hahnemann University School of Medicine, Philadelphia.

Sidney Cohen, MD, assistant vice president, Temple University Health Sciences Center, Philadelphia, has received the 1994 Albert J. Finestone, MD, award for continuing commitment to the educational process in the practice of medicine.

Peter B. Bloom, MD, senior attending psychiatrist, Institute of Pennsylvania Hospital, Philadelphia, and clinical professor of psychiatry, University of Pennsylvania School of Medicine, Philadelphia, was appointed to a three-year term as president of the International Society of Hypnosis.

Allan Tunkel, MD, PhD, assistant director, Internal Medicine Residency Program, Medical College of Pennsylvania and Hahnemann University, Philadelphia, has received the 1994 American Medical Women's Association's Gender Equity Award.

Thomas Jefferson University, Philadelphia, has named **Walter J. Curran Jr., MD**, to chairman, Department of Radiation Oncology.

James Withers, MD, Wilksburg, was awarded the America's Award (often called "The Nobel Prizes for Goodness") by the Positive Thinking Foundation. Dr. Withers provides free medical care for Pittsburgh's homeless.

Todd Sagin, MD, JD, was named medical director of HealthSpring Medical Group, Philadelphia.

Medical College of Pennsylvania, Philadelphia, has appointed **Marie Savard, MD**, director of the Center for Women's Health. Also, Dr. Savard was appointed assistant professor of medicine, Medical College of Pennsylvania and Hahnemann University, Philadelphia.

John J. Androski, MD, Scranton
Hahnemann University School of Medicine, 1939; age 84, died October 8, 1994. Dr. Androski was an internist. •

Andrew W. Culley, MD, Sebring, OH
University of Pennsylvania School of Medicine, 1936; age 86, died October 20, 1994. Dr. Culley was a pathologist. •

Myer M. Dashe, MD, Reading
Hahnemann University School of Medicine, 1935; age 85, died November 3, 1994. Dr. Dashe was a general practitioner. •

Clarence W. Grimes, MD, Rice Landing
University of Pittsburgh School of Medicine, 1930; age 92, died October 22, 1994. Dr. Grimes was a family practitioner. •

Robert A. Heinbach, MD, Selinsgrove
Jefferson Medical College of Thomas Jefferson University, 1942; age 80, died October 19, 1994. Dr. Heinbach was a general practitioner. •

Louis J. Hampton, MD, Ellittsburg
University of Pennsylvania School of Medicine, 1933; age 85, died October 26, 1994. Dr. Hampton specialized in pulmonary diseases. •

Harold R. Kay, MD, Wynnewood
Medical College of Wisconsin, 1972; age 47, died November 12, 1994. Dr. Kay was a thoracic surgeon. •

Robert S. Lefever, MD, Gettysburg
Temple University School of Medicine, 1944; age 74, died October 2, 1994. Dr. Lefever was an internist. •

William H. Magill, Newport
McGill Medical School, Montreal, Quebec, Canada, 1947; age 77, died October 26, 1994. Dr. Magill was a family practitioner. •

Michael A. Peters, MD, Telford
Hahnemann University School of Medicine, 1934; age 86, died October 21, 1994. Dr. Peters was an internist. •

Marie A. Reagan, MD, Pittsburgh
University of Pittsburgh School of Medicine, 1953; age 68, died October 9, 1994. Dr. Reagan was an obstetrician/gynecologist. •

Andrew C. Yellenik, MD, Pittsburgh
Marquette University School of Medicine, Milwaukee, Wisconsin, 1944; age 78, died October 17, 1994. Dr. Yellenik was a general practitioner. •

H. Woodrow Bashline, MD, Grove City
Hahnemann University School of Medicine, 1938; age 81, died October 11, 1994. Dr. Bashline was a general practitioner. •

Joseph M. DeVivo Sr., DO, Philadelphia
Chicago College of Osteopathic Medicine,

1957; age 62, died October 3, 1994. Dr. DeVivo was a urologist.

Harvey P. Feigley, MD, Quakertown
Jefferson Medical College of Thomas Jefferson University, 1942; age 76, died September 23, 1994. Dr. Feigley was a general practitioner.

Guillermo Safferman, MD, Chalfont
Medical University of Argentina, 1945; age 76, died October 13, 1994. Dr. Safferman was an anesthesiologist.

Boris H. Traven, DO, Doylestown
Philadelphia College of Osteopathic

Medicine; age 75, died October 4, 1994. Dr. Traven was an anesthesiologist.

If You Become Sick Or Injured,

Who Will Pay Your Salary?

Protect Your Income With
Commercial Life Disability Income Program.

It's Flexible. Economical.

And It's Endorsed By The Pennsylvania Medical Society.

There's a real chance that sometime between now and the time you retire you'll miss work due to an illness or an injury. That could add up to months with no income to support your household. Fortunately, The Pennsylvania Medical Society offers you a Disability Income Insurance program from Commercial Life, America's leading provider of Disability Income insurance to associations. This plan will provide you with a monthly income in the event you are disabled. It offers superior benefits and is more affordable than most plans you can purchase on your own. You can even customize your benefits to match your individual needs.

If you rely on your income to pay the bills, the mortgage, the tuition for your kids, then you must protect it with Disability Income insurance. To learn more about how Commercial Life's flexible program can give you unsurpassed protection, call toll-free for this free booklet.

SOCIETIES LOOKING AT MANAGED CARE NETWORKS

Of the 50 state medical societies in the United States, 76 percent are either considering development of a physician-sponsored managed care network or are in some stage of developing one, according to a survey completed last fall by Towers Perrin's Integrated HealthSystems Consulting.

In Pennsylvania, the State Society in 1993 considered development of such a network, but opted instead to provide support to its members in local network development. This is actively going forward through the new subsidiary, PennMed Member Services Company (PMSCO).

More formally, a resolution adopted by the 1994 House of Delegates directs the Society to "endorse the concept of physicians pursuing the establishment of Pennsylvania physician-owned health care delivery organizations."

The survey found that 12 percent of state societies are in the process of developing physician-sponsored networks, 28 percent are studying the feasibility of a physician-sponsored network, and 18 percent are actively considering developing one. Of the group currently developing networks, more than half expect their plans to be operational within 12 months, and one state reported that its plan should be operational within three months. The types of managed care organizations being developed include health maintenance organizations (HMOs), preferred provider organizations (PPOs), and exclusive provider organizations (EPOs).

Only 12 percent of the state medical societies have not considered

developing a physician-sponsored managed care network. Of these, the majority indicate that they believe their role is one of education rather than organization.

Of the respondents, 18 percent have already developed a physician-sponsored network, but four of the nine networks are no longer functioning. Of the active networks, three state societies have PPOs, and two have HMOs. Five state societies have considered the development of a network, but rejected the idea as not feasible.

For more on State Society efforts resulting from the Society's feasibility study, see page 23. For a complete copy of the Towers Perrin report, call (913) 451-3000.

STATE'S UNINSURED RATE AMONG LOWEST IN NATION

A new study released by Pennsylvania Blue Shield reinforces findings of a late '80s study that Pennsylvania's uninsured rate is among the lowest in the nation at 9.8 percent.

The new Blue Shield study, "Health Insurance Coverage in Pennsylvania and Characteristics of the Uninsured Population," found that Pennsylvania's 980,000 uninsured are a diverse group of individuals, many of whom are uninsured for only short periods of time.

Reasons cited for lack of health insurance include: cannot afford health insurance (35 percent), unemployed (31 percent), job doesn't offer insurance (20 percent), do not want or need insurance (5 percent), employee share for insurance is too expensive (4 percent), dropped for health reasons (3 percent), and parental/college coverage ended (2.5 percent).

In other findings:

- The study does not include those 65 and older, but if the Medicare population were included, the percentage of uninsured would be approximately one percent lower.

- Approximately 218,000 of the total uninsured population may be eligible for Medicaid, but have not enrolled.

The late '80s study—commissioned by the Pennsylvania Health Care Cost Containment Council, and one of the first of its kind in the U.S.—detailed the number of Pennsylvanians who lack health insurance, and led to several public and private policy changes.

COUNTY NEWS

MEDICAL LEADERS HONORED IN PHILADELPHIA

Dr. Tyson

The highest honor from the Philadelphia County Medical Society, the Strittmatter Award, was presented late last year to **R. Robert Tyson, MD**, for his devotion to medicine, his

dedication to his patients, his work as a pioneer in vascular surgery, and his efforts to improve and promote organized medicine. The county society's annual awards ceremonies were held in November.

Dr. Tyson, a native of Philadelphia, earned his medical degree from the University of Pennsylvania School of Medicine. He interned at Graduate Hospital and had finished one year of residency in surgery there when his training was interrupted by two years in the Navy as a lieutenant (JG). Upon returning to Philadelphia, Dr. Tyson finished his residency at Temple University Hospital, where he went on to serve an assistantship with W. Emory Burnett, MD.

He then joined the faculty at Temple as an instructor in surgery and was certified by the American Board of Surgery and accepted as a fellow in the American College of Surgery. Dr. Tyson stayed at Temple throughout his career, eventually rising to the rank of professor and then chief of vascular surgery. In 1988, he became professor emeritus.

PHARMACIES RECOGNIZED FOR ANTI-TOBACCO EFFORTS: More than 400 Pennsylvania pharmacies were recognized by the State Society in November for being "tobacco free." At a press conference in Harrisburg, Immediate Past President Martin A. Murcek, MD (at podium), and President Elect Janathan E. Rhaads Jr., MD, awarded certificates to representatives of the pharmacies. Dr. Murcek applauded the pharmacies "for standing on the belief that they are in the business of helping sick people, not helping make people sick." The Society has sponsored the pharmacy recognition program since 1991; last year, it honored 77 pharmacies. This year's event was held during the American Cancer Society's Great American Smokeout.

At Temple, Dr. Tyson was an active member of the faculty, serving on a number of committees. He also served a number of professional organizations, including the Pennsylvania Association for Thoracic Surgery, as well as the Philadelphia County Medical Society, the Pennsylvania Medical Society, and the AMA. He was president of the State Society in 1986-87.

Dr. Tyson is past chairman and a 25-year member of Pennsylvania Blue Shield's board of directors; in 1992, he was named executive director of the Pennsylvania Blue Shield Institute. He has published 78 scientific articles and created five films covering various aspects of vascular surgery.

The Cristol Award for contributions to the county society's educational, scientific, and charitable goals was presented to **Norman Makous, MD**. A native of the Midwest, Dr. Makous is a board-certified cardiologist at Pennsylvania Hospital and a faculty member at the University of Pennsylvania and Jefferson Medical College of Thomas Jefferson University. He has been an active participant in the federation of medicine since 1970, serving on several county- and state-level committees. He currently is a member of the State Society's Council on Membership.

Dr. Makous says that he realized that the responsible approach is to participate in the improvement of organizations as a loyalist from within, rather than attempt to change them as a revolutionist from without. "Organized medicine offers a particularly difficult challenge," he adds. "The culture is very resistant to change, but headway is being made and must be made. If prudent, rapid, and possibly major organizational changes are not made, organized medicine will not have reasonable input into the direction of medical care in the future."

Several other physicians and community members were also honored:

- **Jasper G. ChenSee, MD**, a retired anatomic and clinical pathologist from Reading, received the C. Nelson Davis Award for excellence in research devoted to educating physicians about addictive disorders afflicting physicians.

- **Tito Augustine Ranieri, MD**, a Philadelphia surgeon and instructor,

received the Krasnoff Award for the Practitioner of the Year for dedication in the area of patient care and community service.

- **Eric Justin Gertner, MD**, chief resident in internal medicine, Medical College of Pennsylvania Main Clinical Campus, received the Humanness in Medicine Award for Resident Physicians.

- **Jodi H. Brown, MD**, a participant in the Child and Adolescent Psychiatry Fellowship Program at Thomas Jefferson University, received the Appel Award for Resident Physicians for her paper on clinical psychiatry recounting one experience in therapy and what she learned from the experience.

- **The Anti-Violence Partnership of Philadelphia**, an organization devoted to assisting those whose lives are devastated by the murder of a loved one and working with area youth to reduce the epidemic of violence, received a Benjamin Rush Award for outstanding voluntary contributions to the health and welfare of the people of Philadelphia.

- **Reverend Jesse W. Brown Jr.**, a Northern Philadelphia pastor known nationwide as an advocate of tobacco control, also received a Benjamin Rush Award for his commitment to improving the city's health and welfare.

- **Ana Rodriguez**, a Philadelphia native now serving as a police officer in the city's Central Detective Division Domestic Violence Unit, received the President's Award for her dedicated work and compassion for the people of Philadelphia. She is trained to work in child abuse, elder abuse,

domestic abuse, conflict resolution and mediation, victim assistance, and crime prevention programs.

- Forty-nine Philadelphia County physicians received Fifty-Year Awards for their dedication to organized medicine.

OUTCOMES, QUALITY FOCUS OF SPRING SYMPOSIUM

The Pennsylvania Health Care Cost Containment Council is planning a national symposium on outcomes and quality assessment, May 31-June 2, 1995, at the Harrisburg Hilton and Towers. The program will provide information on the state of the art in outcome measurement and quality assessment, both in Pennsylvania and other states, to advance health care data use and add value for both providers and purchasers.

Experts in the fields will discuss: how the interplay between the needs of health care purchasers and the needs of providers of health care has shaped the growth of outcome measurement and quality assessment tools; how health system reform, managed care, integration of delivery systems, quality measurement, and information processing changed the paradigms that shape health care purchasing decisions; and what challenges exist for purchasers, providers, the public, and payers in this environment.

The State Society and the Hospital Association of Pennsylvania are cosponsoring the program; CME credit is pending. For more information, call the council at (717) 232-6787.

ALLIANCE NEWS

ASSISTANCE FUNDS SENT TO TEXAS

The Pennsylvania Medical Society Alliance, through its Emergency Assistance Fund, continues to aid victims of federally declared disasters. Its latest effort is a \$1,000 donation to aid victims of Texas flooding which resulted from extreme rainfall in October.

The fund was established in 1989; to date, the Alliance has donated \$14,325 to assist victims of disasters. Past contributions have been used where no insurance coverage existed to help restore a physician's office, in one case, and to restore an alliance member's home in another. In the midwest, a woman who had no family and no insurance was assisted by the Pennsylvania fund, and children in Hawaii and Georgia, through school programs, were supported following natural disasters.

Physicians and county societies wishing to contribute to the fund may do so by sending a check payable to The Educational and Scientific Trust of the Pennsylvania Medical Society, P.O. Box 8820, Harrisburg, PA 17105-8820. Please specify that the donation is for the Emergency Assistance Fund.

SURGEONS: COULD YOU USE AN EXTRA \$10,000?

If you're a resident in surgery, the Army Reserve will pay you a yearly stipend which could total in excess of \$10,000 in the Army Reserve's Specialized Training

Assistance Program (STRAP).

You will have opportunities to continue your education and attend conferences, and we will be flexible about scheduling the time you serve. Your

immediate commitment could be as little as two weeks a year, with a small added obligation later on.

Get a maximum amount of money for a minimum amount of service. Find out more by contacting an Army Reserve Medical Counselor. Just call:

Do you know someone who needs nursing care in their home?

We have a special person to take care of your special person.

Are your patients entitled and/or eligible for Medicare benefits? If you are not sure call **MEDICAL PERSONNEL POOL** and we will help you get the answer. Bear in mind that a person need not be a Social Security recipient or over 65 to receive Medicare services. People who are disabled for 2 years or more are eligible as are people who are in dialysis for 6 months or longer. **MEDICAL PERSONNEL POOL** provides a full range of **HOME HEALTH SERVICES**, as well as private duty nursing. We provide most of these services in the home as well as in the hospital and nursing home.

FALK LIBRARY OF THE HEALTH SCIENCES
UNIVERSITY OF PITTSBURGH
PITTSBURGH, PENNSYLVANIA 15261

PHYSICIANS WANTED

Western Pennsylvania—Board Certified or prepared emergency physicians needed for staffing a community hospital emergency department near the Ohio/Pennsylvania border. Please send CV to P.O. Box 99431, Pittsburgh, PA 15233-0431.

Pennsylvania—Physician group seeks full-time and part-time physicians for an emergency department of community hospitals in central and western Pennsylvania. Please send resume to P.O. Box 99431, Pittsburgh, PA 15233-0431.

Pittsburgh, Pennsylvania—Penn Group Medical Association (PGMA), a 100-physician multi-specialty group practice affiliated with the largest HMO in Pittsburgh, is seeking BE/BC physicians in: family practice, internal medicine, pediatrics, ob/gyn, and psychiatry. We are formally affiliated with major teaching hospitals and leading community hospitals in Pittsburgh. PGMA serves eight ambulatory care centers, all conveniently located near cultural, educational, recreational, and corporate activities. Excellent salary, and fringe benefits. For confidential consideration contact: Angela Lascola, HealthAmerica, 5 Gateway Center, Pittsburgh, PA 15222, or call collect (412) 553-7502.

Emergency Physicians—Emergency Physician Associates is seeking quality ED physicians for a variety of practice opportunities. Director and staff positions are available. EPA contracts with hospitals in NJ, PA, MD, and NC for the provision of emergency medicine, urgent care and industrial/occupational health services. Our client hospitals are located in rural to urban areas with patient volumes ranging from 10,000 to 75,000. At EPA we offer physicians competitive compensation, flexible schedules and shifts, occurrence-based malpractice insurance, a variety of practice settings to choose from, cooperative working environments, and supportive medical directors and corporate staff. Interested candidates may contact EPA at 1-800-848-EPA-1.

Primary care physicians for Cincinnati, Ohio. Rated #1 city in the nation. Large, successful physician owned organization offers autonomy, excellent income/pension, signing bonus, benefits, call, vacation, and relocation. (800) 880-2028.

Harrisburg—Established young B/C internist seeks associate in outpatient practice. P/T with F/T potential. Phone (717) 534-2636 evenings, or write: 1800 Linglestown Rd., Suite 200, Harrisburg, PA 17110.

Practice Opportunities - Openings Nationally in all specializations. Excellent salary and benefit packages including partnership opportunities, 100% paid malpractice, moving and relocation expenses, license assistance, up to 6 weeks paid vacation. On-site interview expenses paid. Toll-free 24 hours (800) 759-0104. Or send CV to La Salle Med-

ical Group, 6599 East Thomas Rd., Suite 2097, Scottsdale, AZ 85251.

General Surgeon, BC/BE to join large solo surgical practice. Salary \$140,000 with early partnership. Send CV to Box 402, PENNSYLVANIA MEDICINE, 777 East Park Dr., P.O. Box 8820, Harrisburg, PA 17105-8820.

Neurologist—Large South New Jersey group practice seeking a board certified neurologist to perform EMG studies at peripheral sites. Work full time or supplement your practice working in a part-time capacity. Generous salary, plus escalating percentage. Partnership available. Contact Yannelli, Randolph & Co., 995 Old Eagle School Road, Suite 315, Wayne, PA 19087-1709 (610-964-1616).

Primary Care—Northwest Philadelphia suburb. One (1) position remaining to be filled for bright, energetic, graduating family practice/internal medicine resident. Rare opportunity to become part of expanding private practice primary care group. Progressive practice established 1982 and positioning now for long-term growth and security. Existing affiliation with major urban teaching hospital will enable new staff physician to enjoy added professional benefit of teaching students and residents on-site as well as holding official professorship title. Competitive salary and very attractive benefit package. For interview appointment, forward CV to Box 403, PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

Family Medicine/Internal Medicine—Procedure oriented comprehensive and stimulating medical practice northeast Philadelphia suburbs desires additional professional staff member to affiliate by July 1995. Ultramodern facility with full diagnostic and therapeutic support including on-site x-ray services, sigmoidoscopy, and CO2 laser. Attractive salary, full benefits package, and long-term security, makes this an opportunity that is most desirable for the stable, career oriented applicant. Contact Dr. Miller, (215) 638-0666.

Family Practice Physician Wanted—Do you remember why you decided to go into medicine? We still do...it was because of people. We wanted to help people, to make a difference in their lives, to develop relationships of trust, care and compassion. If you are a BC/BE family physician interested in being part of a growing patient-centered practice, send or fax CV and letter of interest to C.P. Carpenter, MD, White Rose Family Practice, 2200 S. George Street, York, PA 17403, FAX: (717) 741-4399. Competitive salary and benefits package.

Opportunity for part-time position in South Central PA. Flexible schedule possible. Private group in hospital practice. General radiology including CT, US, NM, no Angio. Send CV to Box 404, PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

Southern New Jersey—BE/BC family practitioners needed for community health centers.

Our caring approach emphasizes primary and preventative care. Regular hours, competitive salary and benefits. Qualifies for HPSA, state and federal loan repayment. All sites within 45 minutes of Philadelphia or Wilmington. Individuals seeking to make a difference, contact Christine Ross, RN, 1-800-766-5776, or fax CV with cover letter to 314-863-1327.

POSITIONS WANTED

Seeking position in gastroenterology/internal medicine. Available now. Board certified in internal medicine. Board eligible in gastroenterology. British and U.S. trained. Licensed in Pennsylvania. Contact S.P. Nathan, South Baltimore General Hospital, 3001 South Hanover Street, Baltimore, MD 21230, (410) 752-7215.

MISCELLANEOUS

\$\$\$—HMOs reducing your income. Learn what I've learned! No investment. Programs centered around wellness and prevention. Listen to a 30-minute presentation (801) 370-6150 and call me, Dr. Blastein (215) 922-4128 today!

Physicians—Outstanding opportunity for income diversification/supplementation/replacement. Wellness, prevention, fitness; extraordinary patient benefits; Fun! Rewarding! Extremely lucrative! "We create millionaires," *Success Magazine*, March 1992. Wellness Strategies, Inc. 1-800-566-6949.

Pittsburgh—Have claims processed the same way hospitals do—electronically. Our billing service submits claims electronically via NEIC and CV data for processing. Fast payments. Handle increase volume. Bill Cole (412) 271-2740 brochure.

Mobile Diagnostic Services—Studies include Cardiovascular and Sonographic Ultrasound and SSEP. Studies performed in your office or at your patient's location. Interpretations read by board certified radiologists and neurologists. Results available within 48 hours. Global provider to most major insurance companies. Please call for additional information and demonstration: Med Image Inc. (215) 677-5830.

CLASSIFIED ADVERTISING

Rates: \$45 per insertion (\$28 for Society members) for the first 30 words or part thereof; \$1.50 for each additional word; \$6 per insertion for a box number. Payment should be in advance. No agency commission is paid on classified advertising.

Submissions: Copy must be submitted in writing to PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820. For more information, call (717) 558-7843.

Word Count: Count as one word all single words, two initials of a name, single numbers or groups of numbers, hyphenated words, and abbreviations.

Why the Health Care System Is Broken

Marwan A. Wehbé

The system has a broken leg. They want to fix it by shooting it in the foot or by casting the wrong leg! Tell people they should have the best medical care; tell them they should not have to pay for it; tell them they deserve it by right. Now, expect them to be thankful and to pay their dues.

Medicare is being embraced as a model by federal and state legislators. Consider one example of a patient who had hand surgery in the office. It cost him \$50 in deductible, but Medicare refused to pay the physician \$200 for supplies used in office surgery. That was therefore the physician's cost for the privilege of caring for this patient. Soon the patient needed the same procedure performed on his other hand; this he had done as an outpatient at the hospital surgicenter. That cost the patient \$500, and Medicare over \$5,000 in hospital bills. That's Medicare's idea of saving \$200! And, would you believe, the law does not allow the patient to pay that \$200—which would have saved both him and Medicare a lot of money?

Patients must see a gatekeeper and workers a panel physician prior to getting appropriate treatment. The implication is that specialized care can be avoided in this fashion. As a result, definitive treatment is postponed in many cases, and specialists must deal with complications of delayed and inappropriate treatments. Workers are told that they are fakers, disability is prolonged, and the cost of medical care increases.

Insurers are short-changing both patient and physician. By withholding a patient's due, they instigate legal action, and from there on things only get worse. By underpaying physicians, they remove all incentive for physicians to make themselves available and to research faster ways to return the injured to work.

A particular one-hour procedure by a subspecialist is valued by Medicare and by Blue Shield as \$35. A sham appeal process is offered as a recourse. Having gone through it to great lengths, I have seen it to be just that: a sham. The payers' incentive is not to pay "what is fair and reasonable," but as little as possible. The industry even rewards its clerks with promotions and bonuses, as long as they delay payment of health care bills.

The health care system is broken because it is run by bureaucrats who are draining its resources for their own financial benefits. (Have you heard how many billions each health insurance carrier grossed in the last year?) Over 20 percent of every dollar is lost to administrative costs and profit, leaving many health care bills unpaid! It is about time patients demanded their due.

The current Pennsylvania workers' compensation system has been a screaming success...at saving money for the insurance companies, who can now invest their money elsewhere, such as in real estate. This system badly needs to be re-examined to pay for workers' deserved health care, to stop short-changing the injured workers and their physicians. The drug manufacturing business needs to come under more control to decrease its drain of financial resources. The happy-sue-everybody attitude needs to be controlled by appropriate legislation.

Patients need to accept some financial responsibility for their own care. Not only do we get what we pay for, but we will likely get nothing in a system that requires us to pay nothing.

And why shouldn't health care be the highest proportion of GNP and grow faster than any other expense? Do we want the best medical care, and do we not want that more than anything else? Currently the average American spends on entertainment seven times more than on health care. It's a matter of priorities. ☺

Dr. Wehbé is a hand surgeon at the Pennsylvania Hand Center and Bryn Mawr Hospital, Bryn Mawr.

CONGRESS JUST CUT DOCTORS' RETIREMENT SECURITY BY \$34,000 A YEAR— AND WANTS \$2,700 MORE IN TAXES NOW.

Harry R. Tyler, Principal

Last year, Congress cut 36% from your retirement plan¹. That means higher income taxes now², less money in your retirement fund to grow—and \$34,000 less annual income when you retire³.

The impact on your retirement will be dramatic—unless you act now. To have \$100,000 a year of retirement income you will need at least \$1.3 million in retirement assets⁴.

Find out how you can protect your retirement security and increase your own plan contributions—without increasing contributions or costs for other employees.

Call 1-800-79-TYLER for a free copy of the Tyler Consulting Physician Retirement Security Checkup—including a 20-page booklet entitled, "Building a Secure Future." Call today.

1-800-79-TYLER
(610) 344-0900 FAX: (610) 344-7656

The following assumptions are based on a physician age 45; earning between \$140-250,000 per year; retiring at age 65; annual investment growth of 10%; and a 20 year payout (8%) at retirement.

1. Beginning 1/1/94, maximum compensation eligible for contribution to a profit-sharing plan is \$150,000—36% less than \$235,840 before. Instead of a \$30,000 contribution, only \$22,500 can be contributed—7,500 less annually.
2. \$7,500 additional income is taxed at 36% (marginal tax bracket based on \$140-250K of taxable income.) The annual increase in your tax is \$2,700.
3. \$7,500 less is invested for 20 years. Assuming 10% annual return, your retirement fund is reduced by \$429,000—cutting retirement security by \$34,000 every year.
4. To maintain a \$100,000 income (inflation-adjusted at 4%) for 20 years requires \$1,348,674 in retirement assets.

PremierBlue. It's a good sign.

POWERFUL PARTNERSHIPS.

Stability, strength
and synergy
stand the test of time.

Almost twenty years ago,
such a foundation was laid
by medical professionals
to build protection through your own
medical liability insurance company.

With your support, we have grown
to become the insurance carrier
of choice for physicians and surgeons,
as well as their hospitals,
throughout New Jersey and Pennsylvania.

Today, change is everywhere, and stability,
strength and synergy have never been so valuable.

But they are not enough.
To succeed today, you need the added power
of new insurance products, financial services,
and consulting services.

MIIX has broadened its foundation and
introduced these membership enhancements
to help you meet the challenge of change.

Call us for more details: 1-800-234-MIIX.

We develop powerful partnerships.

FEB 22 1995

Our annual reunion demonstrates what makes The James so special - our dedication to caring for your patients. You see, The Arthur G. James Cancer Hospital and Research Institute has a focused mission. To help people who have cancer and their families. So if you ever need to refer a cancer patient, you can be sure our primary interest is their good care.

**WHAT'S SO SPECIAL ABOUT A CANCER
HOSPITAL THAT ORGANIZES A PATIENT
REUNION EVERY YEAR?**

The James is a research and treatment facility dedicated solely to fighting cancer. And everything about The James is geared toward that goal. We are one of only 27 Comprehensive Cancer Centers in the country, as designated by the

National Cancer Institute. We are the only freestanding cancer hospital in the midwest. And assembled at The James is a group of the world's finest researchers and cancer physicians who continually broaden our knowledge and raise the standards of cancer care.

That is what makes The James a premier cancer facility. A place

weekdays, and 24 hours a day, seven days a week, if an emergency should come up.

There are many reasons The James is so special. Here are just a few. But every year at our reunion, there are about 1,200 more.

The Arthur G. James Cancer Hospital and Research Institute, Columbus, Ohio

“Promises.

Every company makes them. Few keep them. Pennsylvania physicians

are lucky to have a resource like PMSLIC.

I know. Early in my career I practiced in the Midwest. I saw colleagues get burned by a company promising the same medical liability protection for less money. I was pretty young, but luckily I didn't go with them. Unfortunately, my best friend, Phil, did. When his carrier went under, it looked as though a lot of good people would go down with it. Phil just got out by the skin of his

teeth. A couple of our friends weren't so lucky. When I came to Pennsylvania, I checked out all my options. Know what? No company can match PMSLIC's record, or offer the same value-added services. Through the years, we've all heard many new carriers guarantee us big savings. But I can't see the value of saving a few dollars in the short run, if it means risking my future. Hey, if you don't believe me, give Phil a call. ”

HOUSE PASSES WELFARE REFORM BILL: The House of Representatives has passed a welfare reform bill focusing on job training and the Medical Assistance (MA) program. House Bill 2 would create a privatized voucher program requiring MA patients to purchase health insurance coverage. The bill provides for a three-year demonstration program in three areas: rural, suburban, and urban. The Society is coordinating a review of the bill as amended by the House. The House moved rapidly on the bill as part of the majority Republicans' "100-Day" program for addressing the issue. The Senate is expected to move with much greater deliberation.

APPEAL FILED IN FIORI CASE: The State Society continues to monitor and support the case of a Philadelphia-area man whose mother wishes to withdraw life-sustaining treatment. Daniel J. Fiori has been in a persistent vegetative state for nearly 19 years. The state has appealed to the Pennsylvania Supreme Court, after the Superior Court decided that agreement between a close family member and two licensed physicians is sufficient to withdraw such treatment. The Society has submitted briefs and presented oral arguments in support of the mother.

NEW E/M GUIDELINES RAISE CONCERNS: The Health Care Financing Administration (HCFA) has issued Medicare documentation guidelines for evaluation and management (E/M) codes, partly in response to physician requests for more explicit criteria to determine level of service on Medicare claims. Developed over a two-year period with input from medical groups, including the AMA, the guidelines affect about 40 E/M codes. Physicians are now concerned about paperwork requirements and other matters. The Society's Council on Medical Economics has reviewed the guidelines in detail and expressed a number of concerns. Appropriate actions will be considered by the board.

MEDICINE EXPRESSES CONCERNS OVER PROPOSED MEDICARE CUTS: The State Society has joined more than 100 organizations nationwide in signing a letter to the U.S. House of Representatives commenting on proposed cuts to the Medicare program. While statistics show that physicians have continually taken payment cuts as program funding changed over the past decade, the letter's bottom line is, "The cuts will...harm Medicare patients." The letter, dated January 20, suggests the need for a partnership between all parties involved "to develop rational and effective, long-term solutions to Medicare financing problems."

GOVERNOR RIDGE APPOINTS INSURANCE COMMISSIONER: Governor Tom Ridge in mid-January announced the nomination of Linda Susan Kaiser to serve as Pennsylvania's Insurance Commissioner. If confirmed, Kaiser would be charged with administering the insurance laws of the commonwealth and protecting the insurance consumer.

CDC GRANT FUNDS NEW TOLL-FREE NUMBER: Physicians and their staffs can now receive timely answers on CLIA and other lab-related issues by calling COLA's new toll-free number, (800) 298-8044 (M-F, 9-5). The service is made possible through a cooperative agreement with the CDC.

DOCTORS' DAY IS MARCH 30: County, state, and national physician organizations will celebrate Doctors' Day on March 30 with a variety of activities, including educational seminars and media events. The State Society has produced promotional kits to help groups plan and celebrate the day, which originated in Georgia in 1933. To receive a kit, call the Society at (800) 228-7823, ext. 443; or fax your request to (717) 558-7840.

LOBBYING PERCENTAGE SET AT 16 PERCENT FOR 1994: For federal income tax purposes, the actual non-deductible percentage of your 1994 Society dues is 16 percent. Because of changes in the tax law, membership associations are required to report the percentage of their overall efforts related to lobbying. Members of these organizations are required to take this percentage into account when identifying dues as tax deductions. Direct questions to (800) 228-7823, ext. 234. Note: The AMA reports that 23 percent of its dues is not deductible.

of the
Pennsylvania Medical Society
May 2-3, 1995
Harrisburg Hilton and Towers

◆ TUESDAY, MAY 2, 1:00 PM

KEYNOTE ADDRESS—**Jeff Levine**, CNN correspondent since 1980, covering medical legislation and regulation on Capitol Hill, Washington.

PLENARY SPEAKERS:

"Medicine's Dilemmas"—**William L. Kissick, MD, DrPH**, a participant in Medicare's original drafting in the '60s, is a prolific writer, commentator, and respected adviser on the U.S. health care scene. He is professor of health care systems, the Wharton School, University of Pennsylvania.

"California's Experience with Managed Care"—**Eugene S. Ograd, MD**, president, California Medical Association, speaks from the cutting-edge of health care change.

PLUS...

- Go one-on-one in a session with Society leadership • Enjoy an evening of entertainment
- Next morning, breakfast with the State Society president • Attend information-packed workshops on technology, leadership, practice parameters • Visit exhibitors • Meet colleagues from across the state...ALL FOR ONLY \$70!

COME EARLY FOR ADDITIONAL EDUCATIONAL OPPORTUNITIES*

**Separate registration and fees for sessions below*

◆ MONDAY, MAY 1

- ◆ PAMPAC seminar, 11:00 am, "Techniques Legislators Really Understand."
- ◆ HMSS Seminar, 4:00 pm, "Enhancing Physician Leadership in a Changing World," created by the Leadership Institute of the Society's Educational and Scientific Trust.

◆ TUESDAY, MAY 2

- ◆ HMSS Assembly Meeting, 8:30 am, "How to Overcome Obstacles and Organize Physicians," a presentation by **Dr. Ograd**.

Look for details of all sessions next month in PENNSYLVANIA MEDICINE, and for your registration form in the February issue of Executive Report.

For more information call the State Society at (717) 558-7750 or (800) 228-7823.

VOLTAREN®

diclofenac sodium
Delayed-Release (enteric-coated) Tablets

CATAFLAM®

diclofenac potassium
Immediate-Release Tablets

Brief Summary (For full Prescribing Information, see Package Insert.)

INDICATIONS AND USAGE

Voltaren Delayed-Release or Cataflam Immediate-Release Tablets are indicated for the acute and chronic treatment of signs and symptoms of rheumatoid arthritis, osteoarthritis, and ankylosing spondylitis. Only Cataflam is indicated for the management of pain and primary dysmenorrhea when prompt pain relief is desired, because it is formulated to provide earlier plasma concentrations of diclofenac (see CLINICAL PHARMACOLOGY: Pharmacokinetics and Clinical Studies).

CONTRAINDICATIONS

Diclofenac in either formulation, Voltaren or Cataflam, is contraindicated in patients with hypersensitivity to diclofenac. Diclofenac should not be given to patients who have experienced asthma, urticaria, or other allergic-type reactions after taking aspirin or other NSAIDs. Severe, rarely fatal, anaphylactoid reactions to diclofenac have been reported in such patients.

WARNINGS

Gastrointestinal Effects

Peptic ulceration and gastrointestinal bleeding have been reported in patients receiving diclofenac. Physicians and patients should therefore remain alert for ulceration and bleeding in patients treated chronically with diclofenac even in the absence of previous G.I. tract symptoms. It is recommended that patients be maintained on the lowest dose of diclofenac possible, consistent with achieving a satisfactory therapeutic response.

Risk of G.I. Ulcerations, Bleeding, and Perforation with NSAID Therapy: Serious gastrointestinal toxicity such as bleeding, ulceration, and perforation can occur at any time, with or without warning symptoms, in patients treated chronically with NSAID therapy. Although minor upper gastrointestinal problems, such as dyspepsia, are common, usually developing early in therapy, physicians should remain alert for ulceration and bleeding in patients treated chronically with NSAIDs even in the absence of previous G.I. tract symptoms. In patients observed in clinical trials of several months to 2 years' duration, symptomatic upper G.I. ulcers, gross bleeding, or perforation appear to occur in approximately 1% of patients for 3-6 months, and in about 2%-4% of patients treated for 1 year. Physicians should inform patients about the signs and/or symptoms of serious G.I. toxicity and what steps to take if they occur.

Studies to date have not identified any subset of patients not at risk of developing peptic ulceration and bleeding. Except for a prior history of serious G.I. events and other risk factors known to be associated with peptic ulcer disease, such as alcoholism, smoking, etc., no risk factors (e.g., age, sex) have been associated with increased risk. Elderly or debilitated patients seem to tolerate ulceration or bleeding less well than other individuals, and most spontaneous reports of fatal G.I. events are in this population. Studies to date are inconclusive concerning the relative risk of various NSAIDs in causing such reactions. High doses of any NSAID probably carry a greater risk of these reactions, although controlled clinical trials showing this do not exist in most cases. In considering the use of relatively large doses (within the recommended dosage range), sufficient benefit should be anticipated to offset the potential increased risk of G.I. toxicity.

Hepatic Effects

As with other NSAIDs, elevations of one or more liver tests may occur during diclofenac therapy. These laboratory abnormalities may progress, may remain unchanged, or may be transient with continued therapy. Borderline elevations (i.e., less than 3 times the ULN [=the Upper Limit of the Normal range]), or greater elevations of transaminases occurred in about 15% of diclofenac-treated patients. If the hepatic enzymes, ALT (SGPT) is the one recommended for the monitoring of liver injury.

In clinical trials, meaningful elevations (i.e., more than 3 times the ULN of AST (SGOT) (ALT was not measured in all studies) occurred in about 2% of approximately 5700 patients at some time during Voltaren treatment. In a large, open, controlled trial, meaningful elevations of ALT and/or AST occurred in about 4% of 3700 patients treated for 2-6 months, including marked elevations (i.e., more than 8 times the ULN) in about 1% of the 3700 patients. In that open-label study, a higher incidence of borderline (less than 3 times the ULN), moderate (3-8 times the ULN), and marked (>8 times the ULN) elevations of ALT or AST was observed in patients receiving diclofenac when compared to other NSAIDs. Transaminase elevations were seen more frequently in patients with osteoarthritis than in those with rheumatoid arthritis (see ADVERSE REACTIONS).

In addition to the enzyme elevations seen in clinical trials, rare cases of severe hepatic reactions, including jaundice and fatal fulminant hepatitis, have been reported.

Physicians should measure transaminases periodically in patients receiving long-term therapy with diclofenac, because severe hepatotoxicity may develop without a prodrome of distinguishing symptoms. The optimum times for making the first and subsequent transaminase measurements are not known. In the largest U.S. trial (open-label) that involved 3700 patients monitored first at 8 weeks and 1200 patients monitored again at 24 weeks, almost all meaningful elevations in transaminases were detected before patients became symptomatic. In 42 of the 51 patients in all trials who developed marked transaminase elevations, abnormal tests occurred during the first 2 months of therapy with diclofenac. Based on this experience, if diclofenac is used chronically, the first transaminase measurement should be made no later than 8 weeks after the start of diclofenac treatment. As with other NSAIDs, if abnormal liver tests persist or worsen, if clinical signs and/or symptoms consistent with liver disease develop, or if systemic manifestations occur (e.g., eosinophilia, rash, etc.), diclofenac should be discontinued.

To minimize the possibility that hepatic injury will become severe between transaminase measurements, physicians should inform patients of the warning signs and symptoms of hepatotoxicity (e.g., nausea, fatigue, lethargy, pruritus, jaundice, right upper quadrant tenderness, and "flu-like" symptoms), and the appropriate action patients should take if these signs and symptoms appear.

PRECAUTIONS

General

Allergic Reactions: As with other NSAIDs, allergic reactions including anaphylaxis have been reported with diclofenac. Specific allergic manifestations consisting of swelling of eyelids, lips, pharynx, and larynx; urticaria; asthma; and bronchospasm, sometimes with a concomitant fall in blood pressure (severe at times) have been observed in clinical trials and/or the marketing experience with diclofenac. Anaphylaxis has rarely been reported from foreign sources; in U.S. clinical trials with diclofenac in over 6000 patients, 1 case of anaphylaxis was reported. In controlled clinical trials, allergic reactions have been observed at an incidence of 0.5%. These reactions can occur without prior exposure to the drug.

Fluid Retention and Edema: Fluid retention and edema have been observed in some patients taking diclofenac. Therefore, as with other NSAIDs, diclofenac should be used with caution in patients with a history of cardiac decompensation, hypertension, or other conditions predisposing to fluid retention.

Renal Effects: As a class, NSAIDs have been associated with renal papillary necrosis and other abnormal renal pathology in long-term administration to animals. In oral diclofenac studies in animals, some evidence of renal toxicity was noted. Isolated incidents of papillary necrosis were observed in a few animals at high doses (20-120 mg/kg) in several balanced subacute studies. In patients treated with diclofenac, rare cases of interstitial nephritis and papillary necrosis have been reported (see ADVERSE REACTIONS).

A second form of renal toxicity, generally associated with NSAIDs, is seen in patients with conditions leading to a reduction in renal blood flow or blood volume, where renal prostaglandins have a supportive role in the maintenance of renal perfusion. In these patients, administration of an NSAID results in a dose-dependent decrease in prostaglandin synthesis and, secondarily, in a reduction of renal blood flow, which may precipitate overt renal failure. Patients at greatest risk of this reaction are those with impaired renal function, heart failure, liver dysfunction, those taking diuretics, and the elderly. Discontinuation of NSAID therapy is typically followed by recovery to the pretreatment state.

Cases of significant renal failure in patients receiving diclofenac have been reported from marketing experience, but were not observed in over 4000 patients in clinical trials during which serum creatinine and BUN values were followed serially. There were only 11 patients (0.3%) whose serum creatinine and concurrent serum BUN values were greater than 2.0 mg/dL and 40 mg/dL, respectively, while on diclofenac (mean rise in the 11 patients: creatinine 2.3 mg/dL and BUN 28.4 mg/dL).

Since diclofenac metabolites are eliminated primarily by the kidneys, patients with significantly impaired renal function should be more closely monitored than subjects with normal renal function.

Porphyria: The use of diclofenac in patients with hepatic porphyria should be avoided. To date, 1 patient has been described in whom diclofenac probably triggered a clinical attack of porphyria. The postulated mechanism, demonstrated in rats, for causing such attacks by diclofenac, as well as some other NSAIDs, is through stimulation of the porphyrin precursor delta-aminolevulinic acid (ALA).

Information for Patients

Diclofenac, like other drugs of its class, is not free of side effects. The side effects of these drugs can cause discomfort and, rarely, there are more serious side effects, such as gastrointestinal bleeding, and more rarely, liver toxicity (see WARNINGS, Hepatic Effects), which may result in hospitalization and even fatal outcomes.

NSAIDs are often essential agents in the management of arthritis and have a major role in the management of pain, but they also may be commonly employed for conditions that are less serious.

Physicians may wish to discuss with their patients the potential risks (see WARNINGS, PRECAUTIONS, and ADVERSE REACTIONS) and likely benefits of NSAID treatment, particularly when the drugs are used for less serious conditions where treatment without NSAIDs may represent an acceptable alternative to both the patient and physician.

Laboratory Tests

Because serious G.I. tract ulceration and bleeding can occur without warning symptoms, physicians should follow chronically treated patients for the signs and symptoms of ulceration and bleeding and should inform them of the importance of this follow-up (see WARNINGS, Risk of G.I. Ulcerations, Bleeding, and Perforation with NSAID Therapy). If diclofenac is used chronically, patients should also be instructed to report any signs and symptoms that might be due to hepatotoxicity of diclofenac; these symptoms may become evident between visits when periodic liver laboratory tests are performed (see WARNINGS, Hepatic Effects).

Drug Interactions

Aspirin: Concomitant administration of diclofenac and aspirin is not recommended because diclofenac is displaced from its binding sites during the concomitant administration of aspirin, resulting in lower plasma concentrations, peak plasma levels, and AUC values.

Anticoagulants: While studies have not shown diclofenac to interact with anticoagulants of the warfarin type, caution should be exercised, nonetheless, since interactions have been seen with other NSAIDs. Because prostaglandins play an important role in hemostasis, and NSAIDs affect platelet function as well, concurrent therapy with all NSAIDs, including diclofenac, and warfarin requires close monitoring of patients to be certain that no change in their anticoagulant dosage is required.

Digoxin, Methotrexate, Cyclosporine: Diclofenac, like other NSAIDs, may affect renal prostaglandins and increase the toxicity of certain drugs. Ingestion of diclofenac may increase serum concentrations of digoxin and methotrexate and increase cyclosporine's nephrotoxicity. Patients who begin taking diclofenac or who increase their diclofenac dose or any other NSAID while taking digoxin, methotrexate, or cyclosporine may develop toxicity characteristics for these drugs. They should be observed closely, particularly if renal function is impaired. In the case of digoxin, serum levels should be

monitored.

Lithium: Diclofenac decreases lithium renal clearance and increases lithium plasma levels. In patients taking diclofenac and lithium concomitantly, lithium toxicity may develop.

Dral Hypoglycemics: Diclofenac does not alter glucose metabolism in normal subjects nor does it alter the effects of oral hypoglycemic agents. There are rare reports, however, from marketing experiences of changes in effects of insulin or oral hypoglycemic agents in the presence of diclofenac that necessitated changes in the doses of such agents. Both hypo- and hyperglycemic effects have been reported. A direct causal relationship has not been established, but physicians should consider the possibility that diclofenac may alter a diabetic patient's response to insulin or oral hypoglycemic agents.

Diuretics: Diclofenac and other NSAIDs can inhibit the activity of diuretics. Concomitant treatment with potassium-sparing diuretics may be associated with increased serum potassium levels.

Other Drugs: In small groups of drugs (7-10 interaction study), the concomitant administration of azathioprine, gold, chloroquine, D-penicillamine, prednisolone, cyclosporine, or digoxin did not significantly affect the peak levels and AUC values of diclofenac.

Protein Binding

In vitro, diclofenac interferes minimally or not at all with the protein binding of salicylic acid (20% decrease in binding), tolbutamide, prednisolone (10% decrease in binding), or warfarin. Benzylpenicillin, ampicillin, oxacillin, chlorotetracycline, doxycycline, cephalothin, erythromycin, and sulfamethoxazole have no influence in vitro on the protein binding of diclofenac in human serum.

Drug/Laboratory Test Interactions

Effect on Blood Coagulation: Diclofenac increases platelet aggregation time but does not affect bleeding time, plasma thrombin clotting time, plasma fibrinogen, or factors V and VII to XII. Statistically significant changes in prothrombin and partial thromboplastin times have been reported in normal volunteers. The mean changes were observed to be less than 1 second in both instances, however, and are unlikely to be clinically important. Diclofenac is a prostaglandin synthetase inhibitor, however, and all drugs that inhibit prostaglandin synthesis interfere with platelet function to some degree; therefore, patients who may be adversely affected by such an action should be carefully observed.

Carcinogenesis, Mutagenesis, Impairment of Fertility

Long-term carcinogenicity studies in rats given diclofenac sodium up to 2 mg/kg/day or (12 mg/m²/day approximately the human dose) have revealed no significant increases in tumor incidence. There was a slight increase in benign mammary fibroadenomas in mid-dose-treated (0.5 mg/kg/day or 3 mg/m²/day) female rats (high-dose females had excessive mortality), but the increase was not significant for this common rat tumor. A 2-year carcinogenicity study conducted in mice employing diclofenac sodium at doses up to 0.3 mg/kg/day (0.9 mg/m²/day) in males and 1 mg/kg/day (3 mg/m²/day) in females did not reveal any oncogenic potential. Diclofenac sodium did not show mutagenic activity in *in vitro* point mutation assays in mammalian (mouse lymphoma) and microbial (yeast, Ames) test systems and was nonmutagenic in several mammalian *in vitro* and *in vivo* tests, including dominant lethal and male germinal epithelial chromosomal studies in mice, and nucleus anomaly and chromosomal aberration studies in Chinese hamsters. Diclofenac sodium administered to male and female rats at 4 mg/kg/day (24 mg/m²/day) did not affect fertility.

Teratogenic Effects

There are no adequate and well-controlled studies in pregnant women. Diclofenac should be used during pregnancy only if the benefits to the mother justify the potential risk to the fetus.

Pregnancy Category B: Reproduction studies have been performed in mice given diclofenac sodium (up to 20 mg/kg/day or 60 mg/m²/day) and in rats and rabbits given diclofenac sodium (up to 10 mg/kg/day or 60 mg/m²/day for rats, and 80 mg/m²/day for rabbits), and have revealed no evidence of teratogenicity despite the induction of maternal toxicity and fetal toxicity. In rats, maternally toxic doses were associated with dystocia, prolonged gestation, reduced fetal weights and growth, and reduced fetal survival. Diclofenac has been shown to cross the placental barrier in mice and rats.

Labor and Delivery

The effects of diclofenac on labor and delivery in pregnant women are unknown. Because of the known effects of prostaglandin-inhibiting drugs on the fetal cardiovascular system (closure of ductus arteriosus), use of diclofenac during late pregnancy should be avoided and, as with other nonsteroidal anti-inflammatory drugs, it is possible that diclofenac may inhibit uterine contraction.

Nursing Mothers

Diclofenac has been found in the milk of nursing mothers. As with other drugs that are excreted in milk, diclofenac is not recommended for use in nursing women.

Pediatric Use

Safety and effectiveness of diclofenac in children have not been established.

Geriatric Use

Of the more than 6000 patients treated with diclofenac in U.S. trials, 31% were older than 65 years of age. No overall difference was observed between efficacy, adverse event or pharmacokinetic profiles of older and younger patients. As with any NSAID, the elderly are likely to tolerate adverse reactions less well than younger patients.

ADVERSE REACTIONS

Adverse reaction information is derived from blinded, controlled and open-label clinical trials, as well as worldwide marketing experience. In the description below, rates of more common events represent clinical study results; rarer events are derived principally from marketing experience and publications, and accurate rate estimates are generally not possible.

In a 6-month, double-blind trial comparing Voltaren Delayed-Release Tablets (N=197) vs. Cataflam Immediate-Release Tablets (N=196) vs. ibuprofen (N=197), adverse reactions were similar in nature and frequency. In 718 patients treated for shorter periods, i.e., 2 weeks or less, with Cataflam Immediate-Release Tablets, adverse reactions were reported one-half to one-tenth as frequently as by patients treated for longer periods.

The incidence of common adverse reactions (greater than 1%) is based upon controlled clinical trials in 1543 patients treated for up to 13 weeks with Voltaren Delayed-Release Tablets. By far the most common adverse effects were gastrointestinal symptoms, most of them minor, occurring in about 20%, and leading to discontinuation in about 3%, of patients. Peptic ulcer or G.I. bleeding occurred in clinical trials in 0.6% (95% confidence interval: 0.2% to 1%) of approximately 1800 patients during their first 3 months of diclofenac treatment and in 1.6% (95% confidence interval: 0.8% to 2.4%) of approximately 800 patients followed for 1 year.

Gastrointestinal symptoms were followed in frequency by central nervous system side effects such as headache (7%) and dizziness (3%).

Meaningful (exceeding 3 times the Upper Limit of Normal) elevations of ALT (SGPT) or AST (SGOT) occurred at an overall rate of approximately 2% during the first 2 months of Voltaren treatment. Unlike aspirin-related elevations, which occur more frequently in patients with rheumatoid arthritis, these elevations were more frequently observed in patients with osteoarthritis (2.6%) than in patients with rheumatoid arthritis (0.7%). Marked elevations (exceeding 8 times the ULN) were seen in 1% of patients treated for 2-6 months (see WARNINGS, Hepatic Effects).

The following adverse reactions were reported in patients treated with diclofenac:

Incidence Greater Than 1% - Causal Relationship Probable: (All derived from clinical trials.)

Body as a Whole: Abdominal pain or cramps, *headache, *fluid retention, abdominal distention.

Digestive: Diarrhea, *indigestion, *nausea, *constipation, *flatulence, liver test abnormalities, *PUB, i.e., peptic ulcer, with or without bleeding and/or perforation, or bleeding without ulcer (see above and also WARNINGS).

Nervous System: Dizziness.

Skin and Appendages: Rash, pruritus.

Special Senses: Tinnitus

*Incidence, 3% to 9% (incidence of unmarked reactions is 1%-3%).

Incidence Less Than 1% - Causal Relationship Probable: (The following reactions have been reported in patients taking diclofenac under circumstances that do not permit a clear attribution of the reaction to diclofenac. These reactions are being included as alerting information to physicians. Adverse reactions reported only in *worldwide marketing experience* or in the literature, not seen in clinical trials, are considered rare and are italicized.)

Body as a Whole: Malaise, swelling of lips and tongue, photosensitivity, anaphylaxis, anaphylactoid reactions.

Cardiovascular: Hypertension, congestive heart failure.

Digestive: Vomiting, jaundice, melena, aphthous stomatitis, dry mouth and mucous membranes, bloody diarrhea, hepatitis, hepatic necrosis, appetite change, pancreatitis with or without concomitant hepatitis, colitis.

Hemic and Lymphatic: Hemoglobin decrease, leukopenia, thrombocytopenia, hemolytic anemia, aplastic anemia, agranulocytosis, purpura, allergic purpura.

Metabolic and Nutritional Disorders: Azotemia.

Nervous System: Insomnia, drowsiness, depression, diplopia, anxiety, irritability, aseptic meningitis.

Respiratory: Epistaxis, asthma, laryngeal edema.

Skin and Appendages: Alopecia, urticaria, eczema, dermatitis, bullous eruption, erythema multiforme major, angioedema, Stevens-Johnson syndrome.

Special Senses: Blurred vision, taste disorder, reversible hearing loss, scotoma.

Urogenital: Nephrotic syndrome, proteinuria, oliguria, interstitial nephritis, papillary necrosis, acute renal failure.

Incidence Less Than 1% - Causal Relationship Unknown: (Adverse reactions reported only in *worldwide marketing experience* or in the literature, not seen in clinical trials, are considered rare and are italicized.)

Body as a Whole: Chest pain.

Cardiovascular: Palpitations, flushing, tachycardia, premature ventricular contractions, myocardial infarction.

Digestive: Esophageal lesions.

Hemic and Lymphatic: Bruising.

Metabolic and Nutritional Disorders: Hypoglycemia, weight loss.

Nervous System: Paresthesia, memory disturbance, nightmares, tremor, tic, abnormal coordination, convulsions, disorientation, psychotic reaction.

Respiratory: Dyspnea, hyperventilation, edema of pharynx.

Skin and Appendages: Excess perspiration, exfoliative dermatitis.

Special Senses: Vitreous floaters, night blindness, amblyopia.

Urogenital: Urinary frequency, nocturia, hematuria, impotence, vaginal bleeding.

If you're looking for the right group practice coverage, why not ask the people who wrote the book on it?

When they needed to know about insuring you and your group practice, the Pennsylvania Medical Society didn't just want us to act as a guide.

They asked us to write it.

We're Colburn-Bertholon-Rowland (CBR). The endorsed broker for the Pennsylvania Medical

Society. And while "A Physician's Guide to Purchasing Professional and Personal Insurance" isn't the catchiest title, if you're up against the complex issues of insuring a group practice,

you'll want it on your bookshelf. It deals with everything from life insurance to disability coverage to professional liability insurance. Oh, and health coverage. Homeowner's insurance. Even long-term care. And there's a lot more to it.

And with CBR, there's a lot behind it. We've spent the last 65 years giving doctors our expertise on all

forms of insurance and group benefits.

When it comes to individual and group practice insurance, we're the people to call on.

If this sounds like the kind of help you can use, call us at 800-551-4504 (Media) or 800-327-1550 (Pittsburgh). Your CBR rep will do more than give you a hand. The first time you meet you'll receive our book – a \$30 value – free. And if you want more answers, just ask.

We Must Sail, Not Drift Nor Lie at Anchor

John H. Hobart, MD

In the not-so-distant past, when the newspapers were filled with sweeping plans for reforming the health care delivery system, I was heard to say on more than one occasion that physicians needed to keep their heads about them and not behave like lemmings, running headlong into the sea just because it seemed the popular thing to do at the time.

We're past the "sink or swim" stage. Thanks in no small measure to organized medicine's educational efforts, we are better informed and more deliberate in our choices. We now stand at the helm of our own ship.

But as Oliver Wendell Holmes warns us, "We must sail, and not drift, nor lie at anchor." And before we cry, "Full speed ahead," we'd better have a pretty good idea of where "ahead" might be, and how to husband our resources in order to get there. That is why your State Society has renewed its commitment to addressing its priority issues.

Each year, our Board of Trustees approves a list of those issues that seem the most germane or critical for the year ahead. This list of priorities guides the Society in its decision to create programs, establish or revise policies, and initiate projects.

In the past, this had led to efforts that sometimes placed considerable demand on our resources, particularly when we had not eliminated any existing efforts, even ones which, having served good purposes in their time, were no longer key issues for most members.

It is impossible to sail off in a dozen different directions at the same time without seriously affecting the likelihood of arriv-

ing anywhere. This must not be the case with us.

The daily health system reform stories to which we became accustomed for so many months ended themselves like lemmings off the cliff. In their place appeared reports about managed care corporations, hospital mergers, and market forces that are changing our health care delivery system.

Our current priorities—in the areas of managed care, legislation, membership recruitment and retention, non-dues expansion, public health, and reimbursement—are designed to address these changes.

We arrived at these priorities by paying attention to what you are telling us about your concerns and needs. We are always available to read your letters, answer your calls, or visit your meetings. This year, we will be developing new mechanisms to

make it easier for you to com-

municate with your State Society. We will also be working to further refine our priorities so we can increase the likelihood of arriving where we want to go—or as near to it as hard work and good planning can get us.

In choosing our priorities, we review data from all sources, but the most important source of information is you.

We're moving full speed ahead in 1995. Our priorities for this year will help us stay on course. We will

doubtless need to make some corrections from time to time to ensure we are moving in the direction that is best for our members and their patients. You'll be hearing from us. More importantly, I hope we will be hearing much more from you. ☐

John W. Mills, MD
Medical Editor

Searching for Decency in '95

Beginning this month's editorial at 33,000 feet wasn't the best of ideas, but I had little choice. Jane and I were on a 12-day visit to Jamul, a rural suburb of San Diego, for a post-Christmas celebration with our oldest daughter and her family.

Fortunately, I had been able to spend a working day on Locomotive 2353 (see November 1994's editorial). With frequent calls to my sister, trying to be supportive over her husband's terminal cancer, his death came as no surprise to us early in the first week of January. The scramble for emergency airline tickets to Oklahoma City for the funeral and on to Pittsburgh was an eye-opening and wallet-emptying experience. Weather has been a factor—monsoon-like weather in San Diego, and snow and ice from the midwest to Pittsburgh.

This bumpy journey home has not been conducive to a thoughtful writing process, but my sense of propriety and decency prompts me to comment on our new Congress and its beginnings—and on Connie Chung's sensationalism.

One hopes our Republican-controlled Congress can really legislate meaningful help for the citizenry in a variety of ways. Health system reform seems to be way down on their list—probably good for us as we need to get our “ducks in a row” before we strive for those items we consider the hallmarks of reform to benefit our patients and relieve us of some real impediments in our efforts to practice medicine.

With all the ballyhoo, it's anyone's guess what we'll see in the first 100 days of 1995. I would like to think our leaders will be sensible enough to precede tax cuts with spending cuts, for otherwise, we'll never see a balanced budget amendment. But, perhaps a much more pervasive problem is the need for elimination of some government bureaucracy and the tremendous waste that goes to the very core of our federal government. We, as voters, must demand that waste be curtailed and political “pork” be stopped.

My final airborne comment this month is directed at Connie Chung's brand of sensational journalism. Obviously, I have to take the reporting of the incident involving her interview with Speaker of the House Newt Gingrich's mother at face value, for I wasn't there, nor did I see the episode on TV. What I think of any person is my own business, and the same is true for each of us. If we choose to broadcast our opinion in our own words or make it public, then a news quote is certainly within a writer's or broadcaster's purview.

Ms. Chung's method of coaxing a statement from Speaker Gingrich's mother—who is obviously unsophisticated to such interviews—by telling her it was “just between you and me” and then going public with it, is not only in poor taste but smacks of outright deceit. CBS executives apparently could see nothing wrong with the whole deal, but quickly reacted to their overloaded network switchboards when angry viewers protested.

Such viewer reaction bolsters my faith in the people of this country, for they sensed an injustice and raised a fuss. However, it really alarms me to realize that media execs, who should be responsible for professional reporting, allow and support such antics. In their eyes, the bottom line appears to be the yardstick by which they measure decency.

This is not the first time Ms. Chung has breached the code of decency. Her persistence is often quite rude and certainly could not be termed professional. Ethical codes don't seem to mean much to some journalists and reporters—only a story to “sell” or boost ratings. This is unfortunate, for as the reporting goes, so the country goes, and once on a downward slide, look out!

Physicians beware! As we become more politically involved and visible as a profession, we must also become more media savvy...for the reporters of today's press have little respect for good intentions or naiveté. ☉

“Ethical codes don't seem to mean much to some journalists and reporters—only a story to ‘sell’ or boost ratings.”

Victory Means Increased Medicaid Payments!

Pennsylvania physicians shortly should begin to notice the effects of the Society's victory in a recent challenge to Medicare payment practices. Estimates of increased payments to physicians from the Department of Public Welfare (DPW) under the Medicare dual eligible program range from \$40 million to close to \$100 million annually.

In July, 1994, the U.S. Court of Appeals for the Third Circuit ruled in favor of the State Society in *Pennsylvania Medical Society et al. v. Snider et al.*, in which the Society had challenged DPW payment practices with respect to medical care for low-income elderly. DPW filed a Petition for Reconsideration, which the Court denied on September 26, 1994.

As a result, DPW must pay both coinsurance and deductibles for low-income elderly who are eligible for both Medicare and Medicaid (dual eligibles). Neither DPW nor the U.S. Department of Health and Human Services filed a Petition for Certiorari with the U.S. Supreme Court within the permissible appeal time period. It is unlikely that the Supreme Court will consider this issue in the near future.

Since the Society's victory in the Third Circuit Court, two other Circuit Courts of Appeals have considered the same issues and have ruled in favor of the health care providers (one cited the Society case in approval, and one adopted the Society decision), bringing the total number of Circuit Courts in agreement to four.

In accordance with a court order, DPW has developed a system, with significant Society input, to automatically process claims involving dual eligibles. Some problems, however, have not yet been resolved; when they have been addressed, the process of reimbursement will begin. In most cases, physicians need do nothing in order to receive the higher payments. In addition, physicians need not participate in the Medical Assistance program in order to receive the new payments. DPW must pay copayments and deductibles for

claims retroactively to September 26, 1994, the date of the Third Circuit's denial of the Petition for Reconsideration.

System not yet fully implemented

Society staff have received a number of calls from physicians saying they have received correspondence or Remittance Advice forms (RAs) from DPW, indicating that no further payment is due on particular claims because the amount already paid by other sources (Medicare) is greater than the amount paid by the Medical Assistance program. This is misleading.

The courts have determined that the Medical Assistance program must pay physicians for copayments and deductibles on behalf of patients who are eligible for both Medicare and Medicaid. Physicians should retain any letters or RAs which indicate that no payment is due in order to cross-reference the claims with updated payments once the system is fully operational.

The court order requires that supplemental payments be made for claims pending as of September 26, 1994, and an interest rate of 5.69 percent must be paid on those amounts due but unpaid as of December 30, 1994. Physicians who continue to experience problems once the system is operational should contact the State Society's Department of Medical Economics at extension 488. Updates on implementation of this program will appear in future issues of *Executive Report*.

NECESSITY REQUIRED TO ORDER EDEMA PUMPS

Physicians are now required to address "medical necessity" when ordering lymphedema pumps for Medicare patients, according to The Travelers, Durable Medical Equipment (DME) Region A Carrier.

The Travelers says physicians, when ordering lymphedema pumps, must complete Section B of the Certificates of Medical Necessity

(CMNs) which deals with the medical necessity of the item being ordered for the Medicare beneficiary. Further, the carrier emphasizes that Medicare will only cover the pumps for the treatment of *primary* lymphedema, such as that resulting from surgical or radiation treatment, spread of malignant tumors with lymphatic obstruction, or congenital forms.

Medicare does *not* cover use of the pumps for treatment of edema secondary to chronic venous insufficiency or its resultant ulcers since, it says, "There is no proven benefit of these expensive pumps over the use of diuretics, compliant leg elevation, and compression stockings for this far more common condition."

Direct questions to The Travelers at (717) 735-9400.

ASSOCIATIONS COLLABORATE TO CERTIFY LAB PERSONNEL

The American Medical Technologists (AMT) and the American Association of Physician Office Laboratories (AAPOL) have agreed to collaborate on the certification of physician office laboratory personnel.

AAPOL represents more than 90,000 physician office laboratories in the U.S., according to Linda Herndon, the association's executive director. Since AAPOL is also responsible to ensure that testing personnel are qualified, it has joined with AMT, an "organization which has a history of preparing well-developed certification tests," Herndon says.

Along with providing the certification exam for AAPOL, AMT will help the association approve its continuing education sessions, and provide a recording mechanism and annual report for certificants. Further, the combined expertise of both organizations will be tapped to educate physician office lab personnel in the many confusing and still-changing areas of CLIA, OSHA, and other regulatory concerns.

STATS

Health insurance premiums are expected to drop 1.2 percent this year for the 50 million-plus Americans enrolled in HMOs. Predicted average monthly charges: \$145 for an individual policy and \$392 for a family policy.

Why Do 60,000 Doctors Trust Us With Their Professional Reputations?

In an era of "not if, but when" a doctor will be accused of malpractice, your choice of professional liability coverage is extremely important. We know that *any* allegation can be devastating to both your professional reputation and your personal assets... making the company you choose critical to your future well-being. Many factors should be taken into account when making a decision.

Consider our financial strength and stability. We are rated A+ (Superior) by A.M. Best and AA (Excellent) by Standard & Poor's. No other company with an exclusive focus on the needs of the health care community has higher financial ratings.

Look at our experience. For nearly a century we have specialized in defending and protecting doctors. No other company has **successfully defended** more than 180,000 malpractice claims.

Local service is important, too. Our General Agents and Field Claim Managers work with you on every allegation. They average more than 15 years experience working with doctors and the legal system.

Why do more than 60,000 doctors trust their professional reputation and personal assets with us? No other company combines nearly a century of experience with financial strength and the local service provided by The Medical Protective Company.

PHILADELPHIA ASTHMA DEATHS RISING

Representing a trend in the nation's largest cities, Philadelphia's asthma mortality rate more than tripled from 1977 to 1991, and those deaths were more frequent among blacks and Hispanics living in the poorest neighborhoods, according to a study published in the December 8, 1994, *New England Journal of Medicine* by a Hahnemann University Hospital asthma specialist.

The increased death rate cannot be attributed to worsening air pollution—air quality actually improved during that period. Neither did it result from more frequent diagnosis or general aging of the population, noted lead author David Lang, MD, director of allergy and immunology at Hahnemann.

"The most significant finding of the study is the interaction of race and poverty," Dr. Lang says. "Race seems to have no effect on asthma mortality rates in nonpoverty areas, but a significant effect in poverty-stricken areas. Specifically, asthma deaths were highest in poverty-stricken areas with large proportions of black residents."

The data also indicate high asthma mortality occurs in areas with high concentrations of females, though this could be skewed by undercounting of minority males in the 1990 census.

The study calls for public health efforts that target Philadelphia neighborhoods where the risk of asthma death is highest. As a next step, Dr. Lang will work on an education effort for patients and asthma care providers in Philadelphia.

TUBERCULOSIS SEEN AS MAJOR HEALTH THREAT

Tuberculosis will continue to be a global health problem unless changes are made in the way many countries combat the disease, according to an article in the January 15, 1995, issue of *JAMA*.

The article's authors collected data on the prevalence of TB, case notifications, and mortality from World Health Organization (WHO) reports. They write:

"The magnitude of the global tuberculosis problem is enormous. According to a recent estimate, approximately 90 million new cases

of tuberculosis will occur worldwide during the decade 1990 through 1999. Among adults, tuberculosis is the world's foremost cause of death from a single infectious agent. If global control of tuberculosis remains at the 1990 level, 30 million people are expected to die of this disease by the year 2000."

Almost 3.8 million cases of TB were reported annually around 1990, according to the authors, and in the U.S. the annual number of TB cases reported increased by about 14 percent from 1985 through 1993.

Projections indicate that the incidence of TB can be expected to increase to 8.8 million cases annually by 1995, 10.2 million cases by the year 2000, and 11.9 million by 2005. Among the reasons for the increased spread of TB in some areas is the escalation of HIV infection and AIDS, and drug resistance.

WHO has developed a strategy to combat TB, including:

- government commitment to an effective control program,
- case detection through predominantly passive case finding,
- administration of standardized short-course chemotherapy to all TB patients,
- establishment and maintenance of a system of regular drug supply; and
- establishment and maintenance of a monitoring system for program management and evaluation.

The authors conclude: "The major obstacle to making more rapid progress remains the limited financial resources available for global tuberculosis control."

DOH UPDATES LIST OF REPORTABLE DISEASES

The Pennsylvania Department of Health is responsible to monitor the incidence of certain communicable diseases and implement control measures to protect the public's health. The department reminds physicians that the updated list of reportable diseases includes:

AIDS; Amebiasis; Animal bite; Anthrax; Botulism; Brucellosis;

Campylobacteriosis; Cancer; Chlamydia trachomatis infections; Cholera; Diphtheria; Encephalitis; Food poisoning; Giardiasis; Gonococcal infections; Guillain-Barre syndrome; Haemophilus influenzae type b disease; Hepatitis non-A non-B; Hepatitis, viral, including Type A and Type B; Histoplasmosis; Kawasaki disease; Legionnaires' disease; Leptospirosis; Lyme disease; Lymphogranuloma venereum; Malaria; Measles; Meningitis, all types; Meningococcal disease; Mumps; Pertussis (whooping cough); Plague; Poliomyelitis; Psittacosis (Ornithosis); Rabies; Reye's syndrome; Rickettsial diseases, including Rocky Mountain Spotted Fever; Rubella (German Measles) and congenital rubella syndrome; Salmonellosis; Shigellosis; Syphilis, all stages; Tetanus; Toxic shock syndrome; Toxoplasmosis; Trichinosis; Tuberculosis, all forms; Tularemia; Typhoid; and Yellow Fever.

All reports of these diseases should be submitted to either the State Health Center or the independent municipal/county health department where the patient resides.

Direct any questions to the Division of Communicable Disease Epidemiology at the Pennsylvania Department of Health, (717) 787-3350.

PENN LAB CELEBRATES 100TH ANNIVERSARY

The William Pepper Laboratory of the University of Pennsylvania Medical Center in December 1994 began its 100th year.

Established in 1895 as the nation's first lab of clinical pathology, the lab was built to improve the methods of clinical investigation, thereby resulting in scientific advances and better treatment of patients. Today, it remains a central component of Penn's Department of Pathology and Laboratory Medicine.

To commemorate the centennial, the department hosted a one-day symposium, "The Clinical Laboratory in the Future of Medicine," in December and opened an exhibit recounting the history of the lab.

AIDS Treatment Hotline Opened

The federal government has opened a toll-free number to provide treatment information by telephone or computer to people with AIDS, their families, and health care providers. The telephone number is (800) HIV-0440. Or call (800) 272-4787 for directions on how to access the system free via computer.

ABC HOME HEALTH SERVICES, INC. is now FIRST AMERICAN HOME CARE

First American Home Care started in 1978 with a single home health agency as well as a strong conviction that patients could best recover in the security and comfort of their homes. As we grew, we attracted superior health care professionals who share in our values. Our employees have brought to our company a depth of management and medical expertise unmatched in the industry. They have made us the industry leader that we are today.

With strength, stability and an uncompromising commitment to quality, First American has developed into the nation's largest, privately-owned, Medicare-certified home health care provider. We have now changed our name to reflect this growth. First American Home Care is now located in 21 states from coast to coast, with over 400 home

health agencies and 13,000+ of the nation's most talented professionals. Poised for the 21st century, we will continue to provide the finest home health services available...anywhere.

First American offers the resources of a large, national firm. Yet, locally based and community focused, we make a difference in the lives of people across America, as we continue to keep families together.

To reflect our growth, we have changed our name.

We began in 1978 with a single home health agency as well as a strong commitment to maintaining health care costs and helping patients recover in the security and comfort of their own homes.

For over sixteen years, we grew, attracting and maintaining superior health care professionals who share in our commitments.

They brought to our company a depth of management and medical expertise unmatched in the industry.

Our company has proactively changed over time. With strength, stability and an uncompromising commitment to quality, we have developed into the nation's largest, privately-owned, Medicare-certified home health care agency.

ABC Home Health Services, Inc.

is now First American Home Care.

First American Home Care is in 21 states from coast to coast, with over 400 home health agencies and 13,000+ of the nation's most talented professionals.

First American offers the resources of a large, national firm. Yet, locally based and community focused, we make a difference in the lives of people across America as we continue to keep families together.

Now, stronger and more efficient than ever, we salute our employees. They have made us the industry leader that we are today. Poised for the 21st century, we will continue to provide the finest home health services available... anywhere.

Extended Acute Care Leadership is our Continuing Commitment.

Leadership.

It implies being the best; it requires vision, credibility and innovation.

In the Delaware Valley, one hospital, the Continuing Care Hospital of Philadelphia (CCH), has taken the lead in providing high-quality medical care for patients with a need for a longer-than-usual hospital stay.

Through its commitment to "high-touch, low-tech" patient care, provisions are made for the patients' every need. As a result, CCH enables its patients to achieve an optimal outcome.

The CCH approach to patient care also respects and accommodates the quality of the relationship that exists between

the patient and the referring physician. In fact, CCH invites referring physicians to apply for privileges at the Hospital and to join with the CCH staff in managing the patient's medical care throughout the length of stay.

The Continuing Care Hospital is also committed to maintaining a staff that includes the region's most respected acute care providers and physicians who are board-certified in geriatric medicine. CCH is accredited by the Joint Commission on Accreditation of Health Care Organizations (JCAHO) and is licensed by the Pennsylvania Department of Health.

Given its strong leadership in extended acute care, CCH

attracts patients from throughout the eight-county area, including Bucks, Chester, Delaware, Montgomery and Philadelphia counties in southeastern Pennsylvania; and Gloucester, Burlington, and Camden counties in southern New Jersey.

When the patient's need is for extended acute care, call the Continuing Care Hospital of Philadelphia at (215) 787-2399. We'll be pleased to send you a copy of our brochure or arrange a tour of our facility.

**A New Tradition of Service.
An Unmatched Standard of Care.**

'95 CONFERENCE OFFERS NEW STRATEGIES AND TOOLS

Just a few years ago, physicians were learning another in a long line of acronyms to hit the medical marketplace—RBRVS. And yet, discussions on the new payment scale seem a lifetime ago next to today's health system reform and managed care discussions. New acronyms—AHPs, POs, PHOs, and IPAs, just to name a few—are clouding the medical practice sky, and those rosy-colored glasses of days gone by just don't cut it anymore. In fact, the only thing you can count on is that more colorful change is on the way.

This year, at its annual Leadership Conference, the State Society will offer tools to help physicians understand and deal with the changing health care marketplace. "Coping with Kaleidoscopic Change" is scheduled May 2-3, 1995, at the Harrisburg Hilton and Towers.

Headlining the two-day conference is CNN Medical Correspondent Jeff Levine, who will open the meeting with the keynote address. William L. Kissick, MD, professor of health care systems at the Wharton School, University of Pennsylvania, Philadelphia, will then discuss Pennsylvania's current health care climate, and Eugene S. Ogrod, MD, president of the California Medical Association, will discuss his state's experiences during the past decade.

An open forum with State Society leaders and breakout discussions with the plenary speakers are also scheduled. Day one will conclude with a PAMPAC-sponsored dinner, featuring a "Vegas-type" variety show with comedy and music by Pennsylvania's own Charlie Prose.

Day two of the conference will begin with an address by Society President John H. Hobart, MD, and the presentation of the second annual Physician Volunteer Award, which honors a Society member for volunteer community service. PENNSYLVANIA MEDICINE will profile this year's award recipient in conjunction with Leadership Conference follow-up coverage in June.

Five workshops also in development for day two will address: practice parameters, antitrust in managed care, computer networks and technology, forming group practices, and leadership/team

development. A sixth workshop is being developed in cooperation with the Society's Young Physicians Section. The speaker, Renee Edinger of St. Louis, is a physician placement consultant.

Registration forms for the 1995 Leadership Conference were published in this month's *Executive Report*. For additional information, see page 6; final details about the conference will be featured in PENNSYLVANIA MEDICINE next month.

Pre-conference seminar stresses unity

Uniting physicians into teams—teams strong enough to shoulder risk and successfully bargain with big insurers and corporations—is a key challenge in 1995. Addressing this challenge is the pre-Leadership Conference seminar sponsored by The Institute for Physician Leadership and the Hospital Medical Staff Section (HMSS).

On Monday, May 1, 1995, from 4:00 to 8:00 p.m. at the Harrisburg Hilton and Towers, the HMSS and the institute will offer, "Enhancing Physician Leadership in a Changing World." Teaching the seminar are two popular medical presenters from Philadelphia.

Mike Magee, MD, senior vice president, Pennsylvania Hospital, and professor of surgery, Jefferson Medical College of Thomas Jefferson University, is known nationally for his "Positive Medicine Project" in which he brings together physicians, hospitals, television and radio stations, museums, and educational facilities to form working alliances.

Tim Brigham, PhD, is both director of special projects and director of continuing medical education at Jefferson Medical College. A popular workshop leader at the Society's 1990 Leadership Conference, Dr. Brigham excels at

transforming the Myers-Briggs personality instrument from an interesting theory into a real-life leadership tool.

The seminar covers three key areas of leadership: 1) flexing the leader's approach to meet the needs of followers (a laboratory experience); 2) using teams to reach consensus (a laboratory experience); and 3) "The Ten Ps of Leadership (Interactive)."

With a working dinner included, the seminar plans to offer Category 1 continuing medical education credit. The cost for members is \$130. For more information, call (800) 228-7823, extension 416.

AMA INTERIM MEETING NEWS

PRESERVING DOCTOR-PATIENT RELATIONSHIP IS PRIORITY

The AMA House of Delegates garnered national media attention during its interim meeting in December in Honolulu, Hawaii, by opposing measures to deny health care to illegal immigrants.

House members argued that forcing physicians to check immigration status infringes on the doctor-patient relationship, violates medical ethics, and creates a threat to public health. AMA House action calls for the federal government to fund emergency treatment of undocumented aliens, noting the unfair burdens on states of providing such care.

Internally, the House created a seat on the AMA board for a young physician and approved a name change for the Hospital Medical Staff Section (HMSS).

The young physician board seat was created to bring "a new perspective" to organized medicine, according to AMA leadership. The Young Physician Section (YPS) has been pressing for the seat since 1992, arguing that lack of representation is one reason young physicians may not be joining organized medicine.

The first YPS trustee will be elected at the AMA's annual meeting in June. Eligible for the seat is any AMA member younger than 40 and not a resident. Residents, as well as medical students, are already represented on the board.

The AMA House also approved a proposal of the AMA-HMSS that the section expand its representation from hospital medical staffs to medical staffs of managed care organizations and other outpatient

delivery systems. Among provisions of the proposal approved by the House: a section name change to the Organized Medical Staff Section. Bylaws language to formally make the change is expected to be considered by the House at its annual meeting in June.

In other news at the meeting, the AMA said it expected to post a \$4.7 million operating loss and \$12.6 million shortfall for 1994.

Pennsylvania efforts

Members of the Pennsylvania Delegation to the AMA effectively represented Pennsylvania physicians at the interim meeting by securing passage of all eleven of the delegation's resolutions.

The adopted resolutions direct the AMA to:

- request HCFA to: 1) apply equally to both carriers and providers rules and regulations concerning payment or repayment of errors in reimbursement or billing, and 2) mandate that Medicare carriers reimburse with interest from the date of payment any amount of payment made by a provider as a result of a carrier request for repayment that is later deemed on appeal to have been requested in error by the carrier;
- study the feasibility of proposing to health insurance companies that they create a special rider coverage to be available for purchase by parents of single children up to the age of 26 or develop some similar approach to

insuring the uninsured of that age group by including them in the policies of their parents;

- seek and support legislation which protects raw material suppliers from product liability litigation so long as the materials they supply conform to medical device manufacturer specifications;
- pursue federal legislation and regulation which denies insurers random access to patient records, requires that requests for information and completion of forms be delineated and case specific, allows a summary of pertinent information relative to any inquiry into a patient's medical record to be provided in lieu of a full copy of the records (except in instances of litigation where the records would be discoverable), and provides proper compensation for the time and skill spent by physicians preparing and completing such forms or summaries;

• amend its policy 280.977 to state: "The AMA petitions HCFA and seeks legislation to provide coverage for direct admission of Medicare patients to a long-term care skilled nursing facility whether or not they have been discharged from an acute care hospital within the last 30 days";

• lobby HCFA to support state medical society involvement in Medicaid Drug Utilization Review (DUR) programs and recognize Pennsylvania as a model program for other state efforts;

• organize a meeting of leaders of the key federal agencies and of the major anti-tobacco organizations, and attempt to help these entities create a broad coalition to create a coordinated anti-tobacco lobbying effort, taking into account the strengths of each component organization;

• adopt the policy that all managed care programs must offer reimbursement for acquisition of sufficient opinions necessary to reach a consensus if opinions acquired regarding the management of a given issue differ substantially;

• study the conflicting economic and ethical issues involved in managed care contracts, and work to clarify and improve access to out-of-network physicians to discounts available for drugs, tests, or services they order for network patients;

• confirm the policy that the House of Delegates continue to be its legislative and policy making body; and

Mark Your Calendar Now!

PHC4 National Symposium on Outcomes and Quality Assessment: State of the Art and Future Directions

Harrisburg Hilton & Towers, May 31-June 2, 1995

The Pennsylvania Health Care Cost Containment Council (PHC4) has designed a three-day symposium for professionals who use health care data and information. Symposium sessions are designed to provide an educational forum tailored to meet the specific needs of individuals with a particular background of knowledge. PHC4 has assembled a top-notch faculty of health care data experts to address this symposium, which includes three plenary sessions and numerous concurrent workshops. This symposium will feature:

- ♦ an examination of systems which focus on specific clinical areas;
- ♦ examples of outcome measurement tools and quality assessment systems; and
- ♦ initiatives undertaken in Pennsylvania and nationwide to use information as a resource to manage health care costs and enhance quality.

Who should attend?

Business coalitions and employers; consumer organizations; federal, state, and local government agencies; health care consultants; health data organizations; health information management agencies; health insurance companies; health policy analysts; health services researchers; hospital management and administrators; labor organizations; legal professionals; managed care organizations; physicians/physician groups; quality assurance professionals; and software and hardware vendors.

For information and registration call 662-8463

**Presbyterian Medical Center
39th & Market Streets
Philadelphia, Pennsylvania 19104**

The Philadelphia Heart Institute at Presbyterian Medical Center is an affiliate of the University of Pennsylvania

**Presbyterian Medical Center designates this continued medical education activity for 7 credits in Category I of the Physicians' Recognition Award of the American Medical Association and the Pennsylvania Medical Society Membership Requirement.*

The Presbyterian Medical Center of Philadelphia is accredited by the Pennsylvania Medical Society to sponsor continuing medical education for physicians.

All faculty participating in continuing education programs sponsored by Presbyterian Medical Center of Philadelphia are expected to disclose to the program audience any real or apparent conflict(s) of interest related to the content of their presentation(s).

• plan a sesquicentennial celebration in Philadelphia in 1997.

Though no elections were held at the AMA's interim meeting, Robert N. Moyers, MD, will seek reelection to the AMA Council on Medical Education at the organization's annual meeting in June.

RESIDENTS REPRESENT PEERS AT AMA MEETING

The Pennsylvania Medical Society Resident Physician Section (RPS)

was active at the AMA-RPS interim meeting held early in December in conjunction with the AMA's interim meeting.

Fourteen residents from Pennsylvania were credentialed at the meeting, including five recipients of the Burroughs-Wellcome Leadership Award: J. Lynne Garrison, MD; Sarah R. Linde-Feucht, MD; Laurie Ann Loevner, MD; John Duncan McLennan, MD; and Mark Alan Thompson, MD. The award honors residents nationwide

for their community service efforts, and pays their way to AMA annual and interim meetings.

Two delegates from the State Society's RPS served as alternate delegates to the AMA House of Delegates, one for Pennsylvania and one for the American Society of Addiction Medicine. Delegates from the Pennsylvania RPS were active in other ways, serving on the Credentials Committee and as Reference Committee coordinators.

Also, Section Chair Stuart Gitlow, MD, and delegates Steven Thornquist, MD; Joyann Kroser, MD; Elizabeth Sinz, MD; and Bradley Stein, MD, were honored for their efforts in the AMA's Member-Get-A-Member program.

Newly available from the AMA-RPS is the Policy Promotion Grants program. Grants of \$500 are awarded for projects and activities coordinated by an AMA-RPS member that reinforce AMA policy. These projects might involve such diverse areas as accident prevention, rural health, tobacco, or domestic violence. For further information and an application, call (800) AMA-3211, extension 4751.

The Society's RPS invites residents who are interested in becoming more active with the Society to contact directly any member of the section's Governing Council. Those with Internet access may contact Dr. Gitlow directly at afagitlow@aol.com.

Stuart Gitlow, MD, MPH, chair of the Society's Resident Physician Section, contributed to this article.

If You Become Sick Or Injured,

Who Will Pay Your Salary?

Protect Your Income With
Commercial Life Disability Income Program.

It's Flexible. Economical.

And It's Endorsed By The Pennsylvania Medical Society.

There's a real chance that sometime between now and the time you retire you'll miss work due to an illness or an injury. That could add up to months with no income to support your household. Fortunately, The Pennsylvania Medical Society offers you a Disability Income Insurance program from Commercial Life, America's leading provider of Disability Income insurance to associations. This plan will provide you with a monthly income in the event you are disabled. It offers superior benefits and is more affordable than most plans you can purchase on your own. You can even customize your benefits to match your individual needs.

If you rely on your income to pay the bills, the mortgage, the tuition for your kids, then you must protect it with Disability Income insurance. To learn more about how Commercial Life's flexible program can give you unsurpassed protection, call toll-free for this free booklet.

COUNTY NEWS

DR. NIELAND-FISHER IS NEW ACMS PRESIDENT

The Allegheny County Medical Society (ACMS) on January 7 installed Nancy Nieland-Fisher, MD, as its 130th president. The second female president in the county society's history, Dr. Nieland-Fisher will serve a one-year term.

Among her goals for 1995:

- help physicians preserve the physician-patient relationship, in light of pressures to conform to managed care;
- foster more local activity in organized medicine, maximizing physicians' collective strength; and
- publish a central directory, listing the needs of free clinics and shelters in Allegheny County.

YOCON[®]

YOHIMBINE HCl

Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalamic centers and release of posterior pituitary hormone.

Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon[®] is indicated as a sympatholytic and mydriatic. It may have activity as an aphrodisiac.

Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.^{1,2} Also dizziness, headache, skin flushing reported when used orally.^{1,3}

Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.^{1,3,4} 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to 1/2 tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.³

How Supplied: Oral tablets of Yocon[®] 1/12 gr. 5.4 mg in bottles of 100's NDC 53159-001-01 and 1000's NDC 53159-001-10.

A board-certified dermatologist in private practice, Dr. Nieland-Fisher also is a clinical associate professor at the University of Pittsburgh. Her interest in dermatology began while attending West Virginia University Medical School. She joined ACMS in 1977 and was elected to its board in 1989. She is a delegate to the State Society, and has served as vice chair of the Communications Committee and chair of the Bylaws Committee. Also, Dr. Nieland-Fisher is a member of the ACMS Peer Review Board and the ACMS Foundation board.

A resident of Shadyside, she serves on the medical staffs at Shadyside Hospital, the University of Pittsburgh Medical Center, Children's Hospital, St. Francis Medical Center, and St. Margaret Memorial Hospital. Dr. Nieland-Fisher is active in a number of professional societies related to her specialty and served as a corporate member of Pennsylvania Blue Shield.

Also assuming new leadership roles as elected officers of ACMS this year are Richard N. Harris, MD, president elect; Alan A. Axelson, MD, vice president; Daniel S. Zorub, MD, secretary; and Dennis J. Hurwitz, MD, treasurer.

MCP SEEKING INPUT ON EDUCATIONAL EFFORT

The Medical College of Pennsylvania (MCP) is planning to develop a national clinical teaching and assessment center in Philadelphia that will help physicians enhance their clinical competence, according to Paula L. Stillman, MD, MACP, senior associate dean of MCP's postgraduate education program. She says that Philadelphia is a logical site to house that program.

The program will be a collaborative effort among medical schools and residency training programs in Philadelphia, boards of medical examiners in several adjacent states, hospital associations, managed care organizations, and insurance companies, according to Dr. Stillman. It will target physicians who want to enhance their generalist skills, who are perceived as having suspect competence (impaired, elderly with possible cognitive deficits, etc.), or who self-refer to improve and update their skills.

MCP is requesting physicians' help in determining "what might be the perceived need for such a program." To convey your thoughts, write to Dr. Stillman at MCP, 3200 Henry Avenue, Philadelphia, PA 19129; or call (215) 842-4562, or fax (215) 849-3821.

DUR DEPARTMENT NEWS

DRUG EDUCATION CENTER OFFERS FIRST CME PROGRAM

The Center for Professional Drug Education and Information, coordinated through the State Society, presents the first in a series of continuing medical education (CME) programs. Focusing on the latest information for Acid Peptic Disease, this program is available at no cost in monograph and audiocassette format.

Approved for CME credit by the University of Massachusetts Medical School, two (2) hours of Category 1 will be awarded for successful completion. To obtain your packet, or for further information about future educational opportunities, call the center at (800) 228-7823.

New drug charts in development

The center is also developing four new drug class, cost-comparison wall charts and pocket cards, which focus on: Ace Inhibitors, H₂ Antagonist, Beta Adrenergic Blockers, and Centrally Acting and Peripherally Acting Antiadrenergic agents. According to the center, the cost-comparison information will be beneficial in physicians' efforts to provide quality care at reasonable cost to patients.

To receive the new charts and cards, and to become a part of this innovative informational network, call the center at the number above. The information is available free of charge.

SPECIALTIES' NEWS

PA ACEP SPEARHEADS NATIONWIDE RADIO EFFORT

The American College of Emergency Physicians (ACEP) is encouraging all state chapters to participate in an important public education project being spearheaded by the Pennsylvania Chapter.

Pennsylvania ACEP has produced a compact disc (CD) which contains 30 radio public service announcements (PSAs) on a wide variety of health care topics—from bicycle safety to injury prevention on-the-job to child poisoning. ACEP funded production of the CD under its Chapter Grant Program. The goals for this project are to educate the public about the specialty and to build bridges between emergency physicians and the broadcast media.

For more information about this project, call Pennsylvania ACEP at (800) 228-7823, extension 466.

PHYSICIANS WANTED

Western Pennsylvania—Board Certified or prepared emergency physicians needed for staffing a community hospital emergency department near the Ohio/Pennsylvania border. Please send CV to P.O. Box 91666, Cleveland, OH 44101.

Pennsylvania—Physician group seeks full-time and part-time physicians for an emergency department of community hospitals in central and western Pennsylvania. Please send resume to P.O. Box 91666, Cleveland, OH 44101.

Pittsburgh, Pennsylvania—Penn Group Medical Association (PGMA), a 100-physician multi-specialty group practice affiliated with the largest HMO in Pittsburgh, is seeking BE/BC physicians in: family practice, internal medicine, pediatrics, ob/gyn, and psychiatry. We are formally affiliated with major teaching hospitals and leading community hospitals in Pittsburgh. PGMA serves eight ambulatory care centers, all conveniently located near cultural, educational, recreational, and corporate activities. Excellent salary, and fringe benefits. For confidential consideration contact: Angela Lascola, HealthAmerica, 5 Gateway Center, Pittsburgh, PA 15222, or call collect (412) 553-7502.

Emergency Physicians—Emergency Physician Associates is seeking quality ED physicians for a variety of practice opportunities. Director and staff positions are available. EPA contracts with hospitals in NJ, PA, MD, and NC for the provision of emergency medicine, urgent care and industrial/occupational health services. Our client hospitals are located in rural to urban areas with patient volumes ranging from 10,000 to 75,000. At EPA we offer physicians competitive compensation, flexible schedules and shifts, occurrence-based malpractice insurance, a variety of practice settings to choose from, cooperative working environments, and supportive medical directors and corporate staff. Interested candidates may contact EPA at 1-800-848-EPA-1.

SURGEONS: COULD YOU USE AN EXTRA \$10,000?

If you're a resident in surgery, the Army Reserve will pay you a yearly stipend which could total in excess of \$10,000 in the Army Reserve's Specialized Training

Assistance Program (STRAP).

You will have opportunities to continue your education and attend conferences, and we will be flexible about scheduling the time you serve. Your

immediate commitment could be as little as two weeks a year, with a small added obligation later on.

Get a maximum amount of money for a minimum amount of service. Find out more by contacting an Army Reserve Medical Counselor. Just call:

MAJ Dave Parker
1-800-759-5462

ARMY RESERVE MEDICINE.
BE ALL YOU CAN BE.®

Primary care physicians for Cincinnati, Ohio. Rated #1 city in the nation. Large, successful physician owned organization offers autonomy, excellent income/pension, signing bonus, benefits, call, vacation, and relocation. (800) 880-2028.

Harrisburg—Established young B/C internist seeks associate in outpatient practice. P/T with F/T potential. Phone (717) 534-2636 evenings, or write: 1800 Linglestown Rd., Suite 200, Harrisburg, PA 17110.

Practice Opportunities—Openings Nationally in all specializations. Excellent salary and benefit packages including partnership opportunities, 100% paid malpractice, moving and relocation expenses, license assistance, up to 6 weeks paid vacation. On-site interview expenses paid. Toll-free 24 hours (800) 759-0104. Or send CV to La Salle Medical Group, 6599 East Thomas Rd., Suite 2097, Scottsdale, AZ 85251.

General Surgeon, BC/BE to join large solo surgical practice. Salary \$140,000 with early partnership. Send CV to Box 402, PENNSYLVANIA MEDICINE, 777 East Park Dr., P.O. Box 8820, Harrisburg, PA 17105-8820.

Primary Care—Northwest Philadelphia suburb. One (1) position remaining to be filled for bright, energetic, graduating family practice/internal medicine resident. Rare opportunity to become part of expanding private practice primary care group. Progressive practice established 1982 and positioning now for long-term growth and security. Existing affiliation with major urban teaching hospital will enable new staff physician to enjoy added professional benefit of teaching students and residents on-site as well as holding official professorship title. Competitive salary and very attractive benefit package. For interview appointment, forward CV to Box 403, PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

Family Medicine/Internal Medicine—Procedure oriented comprehensive and stimulating medical practice northeast Philadelphia suburbs desires additional professional staff member to affiliate by July 1995. Ultramodern facility with full diagnostic and therapeutic

support including on-site x-ray services, sigmoidoscopy, and CO2 laser. Attractive salary, full benefits package, and long-term security makes this an opportunity that is most desirous for the stable, career oriented applicant. Contact Dr. Miller, (215) 638-0666.

Radiologist—Opportunity for part-time position in South Central PA. Flexible schedule possible. Private group in hospital practice. General radiology including CT, US, NM, no Angio. Send CV to Box 404, PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

Immediate Opening for MRI Radiologist—Excellent opportunity to join a group of four radiologists in private practice. This Northeast practice uses state-of-the-art, low field MRI equipment and teleradiology. Board certification is required, licensure in PA, NJ, and NY helpful. Please call or send CV to Dr. James Domeseck at 4630 Street Road, Trevoise, PA 19035, (215) 396-8455.

Kaiser Permanente, the country's largest, most experienced pre-paid group practice HMO, is seeking BE/BC general internists for our expanding groups in Northern Virginia, Maryland and Washington, DC. We offer our physicians the security of a competitive benefits package, shareholder opportunity and a lifestyle that guarantees time for your family. You will practice in a modern, fully equipped and staffed medical office. Our large patient population ensures a challenging medical practice. For confidential consideration, call or send your CV to George H. Fetis, MD, 2101 East Jefferson Street, Box 6649, Rockville, MD 20849. FAX (301) 816-7472. Or call Dorothy Houlihan at 1-800-227-6472. EOE.

Anesthesia Service Provider—Progressive 265 bed acute care institution, located in Eastern Pennsylvania seeking a group provider of anesthesia services. Hospital services include obstetric, gynecological, medical and surgical care. Group will bill and retain revenues resulting from the services, as well as participate in the development of Managed Care Contracts. Group will be responsible for complete administration of the anesthesia department. Group will be expected to initiate new and advanced clinical programs and services within the Anesthesia specialty. Group will be responsible for monitoring the quality of anesthesia care throughout the hospital and meeting standards set by outside organizations. Hospital is located approximately two hours from both Philadelphia and New York in an area which boasts year-round family activities including skiing, hiking, fishing, and swimming. Interested applicants may request a copy of the full RFP by sending their CVs by March 1, 1995, to Healthscope, Inc., 400 Lancaster Avenue, Devon, PA 19333. Telephone (610) 687-6199.

POSITIONS WANTED

Seeking position in gastroenterology/internal medicine. Available now. Board certified in internal medicine. Board eligible in gastroenterology. British and U.S. trained. Licensed in Pennsylvania. Contact S.P. Nathan, South Baltimore General Hospital, 3001 South Hanover Street, Baltimore, MD 21230, (410) 787-2728.

Temple University

DIRECTOR Student Health Services

Director sought to provide clinical and administrative leadership in a newly renovated main campus facility for a comprehensive health program serving a diverse student population of 30,000 on four (4) campuses. MD/DO degree, Pennsylvania license and experience in Family Practice, Adolescent Medicine, Internal Medicine or Pediatrics preferred. Experience in college/university or comparable setting managing budget and facilities as well as supervising staff also essential.

Send letter of application, CV and the names of three (3) references to: **Pamela A. Sherako, Assistant Director, Employment, TEMPLE UNIVERSITY, 1601 N. Broad Street, Philadelphia, PA 19122. FAX: (215) 204-5921.** Consideration of applications will begin immediately. Temple University is an equal opportunity affirmative action educator and employer.

Physicians Shaping the Future

Lee H. McCormick, MD

Editor's Note: This is an excerpt from Dr. McCormick's "Chair Address," presented on December 2, 1994, to the AMA's Hospital Medical Staff Section. The speech was given just prior to the AMA House of Delegates 1994 Interim Meeting. To update Dr. McCormick's speech: The House adopted the report of the Council on Long Range Planning and Development referenced in the article, but the actual vote to change the section name to the Organized Medical Staff Section will not occur until June at the AMA House of Delegates annual meeting.

A report was accepted by the AMA House of Delegates [that] will change the name of [the Hospital Medical Staff Section] to the Organized Medical Staff Section. The impact of that report will go far beyond a simple name change, however; it will enable us to respond to the rapidly changing health care marketplace.

The next few years will undoubtedly see a continuing shift of medical care from hospitals to outpatient networks. Hospital care will be provided by fewer physicians, and many physicians will concentrate their activities in these networks. The new Organized Medical Staff Section will be positioned to represent these physicians, address their needs, and establish medical staff structures outside the hospital as well as inside. Hospital physicians have well-delineated responsibilities that are accompanied by well-established rights. It is imperative that this new group of physicians, who now have only responsibilities, be granted rights similar to their hospital colleagues.

The actions of the American Hospital Association in opposing antitrust relief for physicians should serve as a wake-up call for physicians and make them more cautious in their future dealings with hospitals. Although it often makes sense for physicians and hospitals to work together, physicians must remember that hospital and physician incentives are often quite different. Hospitals must work with physicians in order to survive, but physicians will survive with or without hospitals.

However, despite their vulnerable position, hospitals persist in their efforts to control physicians. At a meeting of the National Health Lawyers Association in November, a session on medical staff bylaws was presented by a member of a well-known, pro-hospital law firm. In most basic terms, his message was: Stop resisting, and surrender control to the hospital. But they just don't get it, do they? They need us for their survival, yet they continue to play those ridiculous games of "We're in control!"

Both the timing and the opportunity are right for the AMA to undertake an intensive effort on behalf of their member physicians to enable them to better cope with a rapidly changing environment. We may not like managed care, but I believe that it can be likened to a bus that is pulling out of a bus station. We as physicians have three choices: We can stand in front of it and attempt to stop it from moving, we can get on and ride, or we can get on and drive! Physicians should direct their energies to the third choice, but we need help.

That help can come from the AMA through programs that have already been developed but are not yet fully implemented. The Capital Pool Project, which introduces physician organizations to bankers and other sources of investment capital, is just getting underway. The AMA University Project, under development, will provide for physicians an intensive, several-day course in the business aspects of physician-driven organizations.

The Physicians Health Plans and Networks Act is model legislation that was written last year but never introduced into Congress. This bill would create changes which would facilitate physician access to capital for network development. I believe that the early introduction of this legislation into the new Congress, as well as the re-introduction of the Patient Protection Act and the Hatch-Archer bill, would be actions that would be of enormous benefit to physicians.

Physicians today have opportunities and strengths that we have not had for some time. Whether we are dealing with hospitals or Congress, we must use that strength to return physicians to leadership in the health care system. We must work together and avoid divisiveness. We must not panic, and we must continue to be advocates for our patients. General Douglas MacArthur said it best: "There is no security on this earth. There is only opportunity." We now have opportunity. We must not waste our efforts trying to prevent the future, but rather we must use our strength to shape the future. ○

Dr. McCormick, a Pittsburgh physician specializing in the treatment of substance abuse, is chair of the AMA's Hospital Medical Staff Section, a member of the State Society's Board of Trustees, and immediate past president of Allegheny County Medical Society.

ou're on solid ground with
the Dodson Plan.

More than 75 years ago, Bruce Dodson, Sr. pioneered the concept of the dividend plan for workers' compensation insurance. Dodson Group has been helping businesses like yours save on premium costs ever since.

The Dodson Plan gives you the opportunity to earn a dividend each year, depending on the claim experience of all insured members. We carefully select those who participate, creating the greatest potential for you to save.

Pennsylvania Medical Society endorsed the Dodson Plan in 1973. Since then, participating members have earned a total of \$2,309,240 in dividends. Share in the savings!

You're on solid ground with Dodson.

POWERFUL PARTNERSHIPS.

Stability, strength
and synergy
stand the test of time.

Almost twenty years ago,
such a foundation was laid
by medical professionals
to build protection through your own
medical liability insurance company.

With your support, we have grown
to become the insurance carrier
of choice for physicians and surgeons,
as well as their hospitals,
throughout New Jersey and Pennsylvania.

Today, change is everywhere, and stability,
strength and synergy have never been so valuable.

But they are not enough.
To succeed today, you need the added power
of new insurance products, financial services,
and consulting services.

MIIX has broadened its foundation and
introduced these membership enhancements
to help you meet the challenge of change.

Call us for more details: 1-800-234-MIIX.

We develop powerful partnerships.

PENNSYLVANIA MEDICINE (ISSN 0031-4595) is published monthly by the Pennsylvania Medical Society, 777 East Park Drive, Harrisburg, PA 17111.

SUBSCRIPTIONS: \$25 per year—United States and Canada; \$35—all others. Single issues \$3.50 per copy prepaid; special issues cost more.

POSTMASTER: Send address changes to PENNSYLVANIA MEDICINE, 777 East Park Drive, PO Box 8820, Harrisburg, PA 17105-8820. Second class postage paid at Harrisburg, PA 17105, and at additional mailing offices.

“Promises.

Every company makes them. Few keep them. Pennsylvania physicians

are lucky to have a resource like PMSLIC.

I know. Early in my career I practiced in the Midwest. I saw colleagues get burned by a company promising the same medical liability protection for less money. I was pretty young, but luckily I didn't go with them. Unfortunately, my best friend, Phil, did. When his carrier went under, it looked as though a lot of good people would go down with it. Phil just got out by the skin of his

teeth. A couple of our friends weren't so lucky. When I came to Pennsylvania, I checked out all my options. Know what? No company can match PMSLIC's record, or offer the same value-added services. Through the years, we've all heard many new carriers guarantee us big savings. But I can't see the value of saving a few dollars in the short run, if it means risking my future. Hey, if you don't believe me, give Phil a call. ”

PITTSBURGH PHYSICIAN NOMINATED FOR STATE HEALTH SECRETARY:

Governor Tom Ridge on February 21 nominated Peter J. Jannetta, MD, a world-class surgeon from Pittsburgh, to be Pennsylvania's next Secretary of Health. The Pennsylvania Medical Society has gone on record as applauding the nomination. A Society member since 1972, Dr. Jannetta is chairman of the Department of Neurological Surgery at the University of Pittsburgh School of Medicine; he is known internationally for his clinical work. As health secretary, he will transfer his administrative duties at Pitt to the department's vice chairman and maintain a limited specialized clinical practice, performing surgery approximately one-and-a-half days per week. He will serve as secretary without compensation and will recuse himself from any decisions or transactions involving the University of Pittsburgh. The Department of Health has more than 1,300 employees and a total budget for this fiscal year of \$589 million. The appointment requires Senate confirmation.

QMB CROSSOVER PAYMENTS BEGAN LAST MONTH: At press time, physicians statewide should have received checks totalling more than \$9.5 million for over 650,000 claims processed for "Qualified Medicare Beneficiaries" (QMBs) who obtained medical services under the state's Medicaid program, according to Department of Public Welfare (DPW) data reports. DPW in early February sent out its first checks to physicians who participate in both Medicare and Medicaid. After catching up on claims not previously processed, DPW will reprocess previous incorrectly processed claims. The money is being paid as a result of the Society's victory in federal courts in a lawsuit that sought to force the state to pay appropriate coinsurance and deductibles for dual-eligible patients.

SOCIETY SUPPORTS INTRODUCTION OF RURAL ACCESS BILL: State Society President John H. Hobart, MD, spoke at a mid-February press conference in the State Capitol in support of House Bill 630, to protect health care access in light of restrictive health insurance networks. Introduced by Representative David O. King (R-Mercer), the bill addresses insurance industry policies related to managed care health programs. Specifically, the bill would provide a number of protections for health caregivers. In brief comments, Dr. Hobart said the Society supports measures which protect patient access. He also applauded a provision to prevent managed care plans from terminating caregiver contracts without cause. The bill was referred to the House Insurance Committee.

END-OF-LIFE CARE DEBATE CONTINUES, IN SPITE OF FIORI DEATH: The State Society has acted as *amicus curiae* in *In re: Daniel J. Fiori*, a court case involving the ability of a surrogate decision maker to discontinue feeding a patient who is in a persistent vegetative state and who never expressed any wishes concerning end-of-life care. The state attorney general's office has opposed this practice. The Superior Court in mid-January supported the ability of a surrogate, along with two qualified physicians, to make these decisions without court involvement, except in unusual circumstances. Although Daniel J. Fiori died in early February, the Pennsylvania Supreme Court has agreed to hear the attorney general's appeal of the Superior Court decision.

FEDERATION CAMPAIGNING FOR MEDICAL LIABILITY REFORM: At press time, the Federation of Medicine was campaigning to ensure that U.S. House of Representatives' efforts for liability reform within their "Contract with America" include medical liability measures. Currently, the legislation addresses liability reform for "product manufacturers and sellers" only. The State Society says: "If these reforms are passed without the inclusion of a cap on non-economic damages for medical malpractice, [the reforms] will be harmful to physicians—and their patients!" Physicians were asked to contact their U.S. representatives to encourage their support of medical liability amendments; action on the bill was expected in early March.

Using My Editorial License

John W. Mills, MD
Medical Editor

During the past four years, only rarely have readers taken issue—by pen or phone—with the editorials I've written for this publication. I'm not sure why this is. Perhaps because no one reads them, or maybe because all who read nod their heads in sage agreement with all of my writings. Both these simplistic answers probably contribute to the truth. But as noted before in this column, I have earnestly tried, on occasion, to issue some challenges; to sound warnings; and, more often, to offer one physician's personal opinion of our profession's issues and problems. And, once in a while, I get carried away with the fun of writing and interject a personal anecdote or two.

Unless the Publication Committee or my readers suggest differently, I'll continue in this mode, again this month sounding more "warnings" to the profession.

Government scrutiny

My most ominous warning is a repetition of my message in January: Physicians beware the stepped-up fraud and abuse efforts of the Justice Department, the Health Care Financing Administration (HCFA), and the Office of Inspector General (OIG).

Attorney General Janet Reno has placed more agents, including FBI types, into this push and has specifically ordered increased action. More than 2,600 physicians nationwide have been excluded from Medicare and Medicaid on fraud and abuse charges since the mid-1970s; over 1,500 physicians are actively under exclusion from both programs in the U.S.

It has been observed that most of the "governmental trauma" to the medical profession has taken place during Republican administrations; that should be a warning in itself. With both political parties trying to reduce the deficit, and with the rhetoric coming out of Washington concerning entitlements and a middle class tax cut, it should be obvious that the two largest public health insurance programs—Medicare and Medicaid—are on the surgery table. Couple this with reports of increased fraud and abuse activity—we physicians have to be very sure we abide by all the rules and are proactive so that Congress doesn't just slice away.

The fearsome thing here is that mandatory physician participation, with or with-

out mandatory assignment, could be legislated on either the federal or state levels. In fact, several states already have such laws on the books. Loss of these freedoms would pretty much end medicine as a profession.

One further note on our Republican Congress—both the House and Senate Judiciary Committee chairs have been replaced by Republicans in favor of tort reform. There are two things to watch here: Federal tort reform may be seen to interfere with states' rights (a Republican plank), and the trial bar has hired a GOP strategist to look for some means to keep their winning ways. The recent Herrmann Hospital decision on physician recruitment should be "must reading" for all physicians and hospital physician recruitment personnel.

Owning managed care entities

My second warning: Physicians are woefully behind in owning and operating managed care entities—especially in Pennsylvania. In comparison, California physicians have a considerable lead in such endeavors.

One of the impediments in Pennsylvania is the strong individualist posture of our physicians. As I've said before on these pages, we need to work together toward common goals. We're encouraged by the amount of interest engendered by our newest subsidiary, PMSCO. See page 18 for a sample of how they can help.

While our House of Delegates voted in the early '80s not to start a statewide HMO, this past October the delegates voted in favor of the concept. Your Board of Trustees considers this a top priority issue, for discussion on the agenda in our meeting this month. We'll be considering proposals put forth by the Pennsylvania Physician Healthcare Plan (PPHP), the physician-owned HMO being ushered by Gary Brown, MD.

A final thought—plan to attend the 1995 Leadership Conference, May 2-3, at the Harrisburg Hilton. Not only will the president of the California Medical Association be on hand to discuss managed care from his vantage point, but you can take advantage of the most up-to-date information available to help you deal with the "kaleidoscope of change" in medical practice issues. ☺

For the second year in a row, Dr. Mills is chairing the steering committee for the Society's annual Leadership Conference. For more information on what the committee has planned for this year's conference, see pages 22 and 32.

Tough, Smart And Yours.

Science, Compassion: Doctors' Day and Beyond

John H. Hobart, MD

Of all the achievements that could serve as the basis for what is called Doctors' Day, it is worth pondering a bit that March 30 commemorates one of the first instances of the administration of sulfuric ether during surgery. The physician who noted ether's effect on pain, and who made use of it to remove a tumor from the neck of a patient on March 30, 1842, was Crawford Williamson Long, MD, a Georgia native who received his medical degree, I am pleased to note, from the University of Pennsylvania.

While the Medical Society of the State of Pennsylvania—now the Pennsylvania Medical Society—was not founded until six years after this commemorative event, some county and district medical societies had been around for a while, including Philadelphia (1796), Warren County (1821), Berks County (1824), Franklin County (1825), Chester County (1828), and Susquehanna County (1838).

An early historian of the Society wrote that, while the "chief ideas" proposing a statewide medical organization were lost to time, "no doubt" the founders hoped "to institute a more powerful aid in the formation of medical societies, and the union of these into a harmonious body which would act to attract all respectable physicians to connect themselves to the local bodies."

Even as late as 1850, he continued, "the writer is aware of a great objection on the part of many of the more prominent physicians to hold allegiance to any form of medical organization..."

"Living in the light of the valuable results obtained from the many medical societies of the present day, it is difficult to realize the heart burnings and jealousies then prevailing. Up to the year 1857, membership was rarely sought, often declined, and for the most trivial reasons."

As one who often looks to history for the lessons it can teach us, I'm almost inclined to stop right there. It is both frustrating and encouraging to know that convincing

physicians of the value of membership in their state medical society is an issue that has been with us from the beginning.

Frustrating, because one would like to just solve the problem and get on with the business of representing and supporting our profession. Encouraging, because the past teaches us that events in the greater world—laws, regulations, economics—are often the best promoters of medical society membership.

Dr. Long's innovative use of ether has led to a sophisticated science of anesthesiology that has alleviated suffering for millions and made possible the life-saving surgical interventions we take for granted today.

In this, his work reflected one of the founding principles of our own State Society—"the promotion of all measures adapted to the relief of suffering and to improve the health and protect the lives of the community."

Sometimes we are criticized because the work of our meetings and assemblies concentrates on legal, legislative, regulatory, and economic issues. I make no apologies for this. Every day, we get up and go into our offices and devote our time, energy, and skills to helping our patients. Every day, we practice the science of medicine. Every day, I hope, we exercise the compassion of our profession.

Our medical societies work to ensure that we can do this tomorrow and that our young colleagues can continue to exercise their best medical judgment in 10 years, and 20 years, and 50 years from now.

It is good for our profession that March 30, Doctors' Day, commemorates the compassionate application of a scientific discovery. It is just as good that on March 31, and afterwards, our Pennsylvania Medical Society is meeting with legislators, reviewing regulations, analyzing insurance industry proposals, offering advice on managed care, and fulfilling its role in serving and preserving the profession that means so much to us all.

My sincere best wishes for Doctors' Day. ◉

The future of medicine.™

REFORM SHOULD INCLUDE LEGISLATIVE PROGRAM

The United States has the best medical care in the world. The decision about change that will be made in the immediate future will determine whether that care will improve and expand or whether bad decisions will cause deterioration. The following is offered as an approach to ensure the further development of good medical care in the U.S.

1. Universal accessibility is much preferred to the effort to obtain universal health care. Universal accessibility is a free-choice approach; the desire for universal care *must* include governmental intervention. In fact, that latter approach was an integral part of the Clinton National Health Plan.
2. High quality of medical care should be the basic goal in the patient-physician relationship. The medical profession is best capable of preserving and advancing that high quality care; governmental intervention will automatically reduce the quality of medical care and will increase the cost as well, resulting in rationing.
3. Patients should have complete free choice. They should have free choice to select their physician, and they should have free choice of the method of receiving medical care.
4. There should be marked reduction in governmental interference in medical care. [Such interference] operates to the detriment of the patient and results in large rises in cost. Even such features as peer review should be subjected to critical analysis. In my experience, it is wasting funds and impedes the giving of good care. Medicare ought to be eliminated.
5. A payment mechanism based on market forces is the only road to follow. This should involve the use of tax credit funds to pay for medical care deposited in medical savings accounts. Patients would pay for and choose high-deductible personal medical insurance (low premiums) and also pay for comprehensive insurance. The patient would own the insurance, making it completely portable, and all employer mandates (taxation of employers to pay for insurance) should be eliminated. Any funds remaining in the medical savings account would be invested by the patient.

6. Those people not able to participate in this major program would receive tax credits and tax vouchers so that they could buy their own insurance.

7. Physicians should institute an enlarged physician-patient partnership giving patients our guidance in the decision-making process—choosing health insurance, guidance on medical and consultation choices, and a participation in patients' problems that is professionally feasible.

8. Professional liability reform is essential.

9. Antitrust relief for the medical profession is vital.

10. We must also engage in persistent and continuing education programs among our physicians and medical students to alert them of the great danger in governmental control programs and/or excessively bureaucratic structures which will prevent high-quality patient care and which will make the cost mechanism the driving force in the care of patients. At the present time, I do not

think enough physicians are fully aware of these dangers.

Implementing a Membership-Driven Process: Communication Is Key

Roger F. Mecum
Kenneth G. Robinson

This second in a series of articles about the Society's new "membership-driven process" focuses on the importance of two-way communication to the State Society's effectiveness.

In 1990, the State Society initiated a three-year plan to improve communications efforts between our membership, leaders, and staff administration. At that time, we created a new logo, strengthened our corporate image, redirected our public relations efforts, redesigned this publication, consolidated several newsletters into *Executive Report*, and expanded our direct involvement in public health issues.

Your State Society did all this, anticipating the need for a more adaptable, focused, accessible organization to deal with the increasing pace of change. But no crystal ball in 1989 could have predicted the pace, or the incredible twists and turns, of health care marketplace change which have occurred in even the last two years.

Now, we are introducing the next step in our communications planning as part of the Society's "membership-driven process"—not only to maintain the new pace, but more importantly, to continue our leadership in the health care community.

The overriding organizational goal of this new plan is very basic: to increase membership ranks and retain individual members. Nothing is more basic to any membership organization during this decade of not only radical economic change, but also dramatic changes in professional identities.

How to do this? By becoming as valuable a resource as possible to Pennsylvania physicians.

To accomplish this, our first objective is to develop an effective, ongoing system to help leaders better listen and respond to members. Quite simply, our objective is to improve our ability to anticipate your needs, to take actions to aid those needs, and to communicate to you about our resources. We are developing new methods

toward more dynamic and interactive two-way communications between the State Society and its constituency groups.

The MDP link

In the January issue of this publication, we described the concept which underpins our plan. We envision the membership-driven process (MDP) as a five-step, continuous cycle:

- 1) obtain input from membership and outside sources,
- 2) analyze the information,
- 3) establish priorities,
- 4) act on the established priorities, and
- 5) provide feedback to membership.

The new communication plan addresses steps one and five of this process—how to obtain input in a more effective fashion and communicate what the Society is doing about it back to the membership. Both steps are critical to effective analysis by the Society so that its leaders can set clear priorities (step three) on your behalf. We see this process as a means to focus Society efforts on fine-tuning the existing communications system.

Since heightened, more responsive involvement from the Society's leadership and staff are key to improving communications, a major component of our strategy is to improve the tools and training provided to these groups. We are developing new tools to help physician leaders more effectively communicate with the grassroots membership—whether speaking at county medical society meetings, specialty meetings, hospital medical staff meetings, or simply one-on-one with colleagues. Since all physician leaders are as busy as their colleagues, these tools must be concise, practical, and easily accessible explanations of Society policies, activities, and actions.

But improving tools and training to the many willing Society leaders is not enough. Board members, council members, county society leaders, and committee members are readily activated communicators; we know that we must also identify and reach out to all potential

Mr. Mecum is the Society's executive vice president; Mr. Robinson is vice president of communications and public affairs.

leaders—members of the House of Delegates, academic physicians, and many others—and involve them directly in our two-way communications.

Technology: Help around the corner?

Communications technologies are changing almost as rapidly as the health care marketplace. While the Society's current communications efforts rely largely on direct mailings, fax correspondence, and telephone contact, we're carefully monitoring all emerging communications technologies—electronic mail, computer bulletin boards, teleconferencing—to select the most effective means to interface with members and leaders.

In January, the Society's board appointed a committee to work with an already active internal group to assess the complex pros and cons of various technologies and systems. This project's goal is to move ahead rapidly to research, test, and introduce pilots of the most cost-effective and promising systems.

Already part of that effort is a pilot program involving members of the Capitol Contacts project—physician members who are called upon to make timely contacts with state and federal legislators. The pilot will test various "fax-on-demand" and "broadcast fax" services to quickly disseminate calls to action on legislative issues and updates on fast-moving regulatory issues.

Fax-on-demand systems would allow callers to a special State Society number to reach a menu of frequently updated information, and through the telephone keyboard select documents to be immediately faxed to them. Broadcast fax services would enable the Society to fax high-priority documents to targeted membership segments. Pilots of these services to small test groups will be closely monitored and evaluated as they are considered for expansion to larger segments of the membership.

Meanwhile, the Society is investigating computerized information storage and retrieval systems to expand and expedite our ability to respond to members' questions and information needs. We are actively monitoring and testing various accesses to the "information highway," as well as researching physicians' developing use of this resource.

More questions than ever

All these efforts will require extensive research, perhaps more than we've ever done in the past. Your cooperation and active input is the key to our success.

If confronted with a Society communications survey or by a Society representative asking for your opinion, please take time to let us know, honestly and completely, what you think would make the Society more valuable to you as a dues-paying member.

One of the questions we intend to thoroughly investigate is the continuing perception of members that they are "inundated" by mailings from "organized medicine." While the 1990 communications reorganization attempted to address this perception by substantially reducing the number of State Society mailings, this perception seems to persist—at

"The overriding organizational goal of this new plan is very basic: to increase membership ranks and retain individual members."

least anecdotally.

Investigating such membership-wide perceptions is one of the greatest challenges to our new communications plans. You're busy, and the channels to the Society may not be perfect. But we realize that the State Society cannot effectively meet your needs without the ability to collect and condense the mountains of available information related to physicians and assemble it into useful, accessible resources. ☐

For more information on the Society's membership-driven process, see "Implementing A Membership-Driven Process: Medicine's Future Is in Your Hands," PENNSYLVANIA MEDICINE, January 1995, pages 26-28.

Opening Dr. Del Grosso's "Black Bag"

The world's second-largest online medical service is operated out of the home of a Pennsylvania physician. Reachable by a direct-dial phone call, it exemplifies several uses of computers in medical communications. This third in a series of articles on computers and medicine describes the Black Bag bulletin board service and how to use it.

Here's a question you can use to stump that computer jock down the hall: What's the world's second-largest online medical service? The largest? No, too easy. That, of course, is the Medical Library and Reference System (MEDLARS), operated by the National Library of Medicine (NLM). It contains some 40 huge databases, including its flagship database MEDLINE, which contains well over seven million bibliographic references. Recent articles in this series have described MEDLINE and the use of NLM's inexpensive software package, Grateful Med®, as a MEDLARS search tool. MEDLARS is supported by substantial staff at the National Institutes of Health and has an operating budget of millions of dollars annually.

So who's Number Two?

Try the Black Bag, operated by Edward Del Grosso, MD, a Pennsylvania doctor about six years out of medical school. It contains over 250 online discussion groups on almost any medical topic imaginable, a substantial body of medical information aimed primarily at lay users, a host of online newsletters, and the world's largest collection of medically oriented personal computer software in the public domain. Its staff consists only of Dr. Del Grosso, evenings and weekends, and its operating budget is about \$150 per month.

The Black Bag is an example of an online bulletin board service (BBS), accessed through a computer modem over regular voice telephone lines. As the words "bulletin board" imply, a BBS provides a place where callers can post messages to be read by anyone who checks the board. Anyone wishing to reply may do so either by post-

Fred D. Baldwin

ing another public message or by sending a private response. Most bulletin boards also maintain libraries on topics likely to interest their users—for example, reference materials, answers to frequently asked questions, or copies of particularly interesting exchanges that have appeared on the BBS in the past.

"My interest in computers has always revolved around the modem," Dr. Del Grosso says. "Other than word processing, the point for me of having a computer is communicating."

Currently, the Black Bag receives roughly 60 calls per day (almost all long distance) and has about 3,100 listed users. Although Dr. Del Grosso says he originally envisioned his service as a means of improving communications among medical professionals, about 80 percent of the callers today are patients and other individuals without formal medical training.

The feature most likely to make the Black Bag of interest to physicians is its provision of entry points into roughly 250 medical message centers. Many of these focus on specific medical problems such as cystic fibrosis, hearing difficulties, or substance abuse; some are organized around professional specialties such as radiology, psychotherapy, or nursing. There are several sections on AIDS, ranging from reports on clinical trials to sources of social and psychological support for patients.

These message centers serve as electronic bulletin boards or what Dr. Del Grosso calls "distributed conferences." That is, they provide online forums in which clinical practitioners, researchers, patients, and non-physician caregivers can communicate around common interests. Some are open to anyone; some permit anyone to read messages, but screen postings for relevance; a few, dealing with sensitive issues like child abuse, have closed sections. Computer buffs may call them by any of several names—"discussion groups," "news groups," or "echo mail"—but this reflects the histories of different transmission channels, rather than differing functions.

Mr. Baldwin, a contributing author from Carlisle, is currently co-authoring a book for Little, Brown & Co., with the working title, Infomedicine: A Consumer's Guide to the Latest Medical Research. Release is expected in Fall 1995.

The "files" section of the Black Bag includes *FDA News* (daily updates on Food and Drug Administration recalls and device alerts), *Aids Treatment News* (weekly updates on AIDS treatments), the CDC *MMWR* (daily updates from the Centers for Disease Control and Prevention), and, on the more popular side, an electronic edition of the health section of *USA Today*.

The Black Bag has a huge collection of "shareware" available for downloading without charge to your own computer. (Shareware is computer software distributed on an honor system; users who like a program are asked to pay a fee, typically modest, to its author in return for documentation and updates.) The Black Bag's software collection ranges from displays of medical graphics to programs to facilitate record-keeping and billing.

Non-physician callers often consult the Black Bag's disease and symptom databases, which cover a wide range of medical problems and techniques. Dr. Del Grosso describes these databases' level of sophistication as roughly that of the *American Medical Association's Home and Family Adviser*, or perhaps *The Merck Manual*.

Dr. Del Grosso, a native of Connecticut, received his medical training at Ohio State College of Medicine, Columbus, and completed his residency in Delaware. In 1994 he moved to Collegeville (near Philadelphia) where he works as a radiologist at Pottstown Memorial Medical Center. His wife, Carol Glessner, MD, is a family physician with, Dr. Del Grosso says, "no interest in my computers."

His own interest in computers began in medical school when a friend introduced him to a medical discussion group on the commercial online service CompuServe. He concluded that he could provide more information for health care practitioners at rates lower than those CompuServe then charged.

"I went and took out a student loan," he says. "Other people were going to Florida; I bought a PC [personal computer]. That was in 1984. It's been growth ever since then."

He now spends between 20 or 30 hours a week in work connected with the Black Bag. "You've got to realize," he says, "that everybody's got a hobby."

By the standards of serious technophiles, Dr. Del Grosso's personal computer network is modest enough. The Black Bag's hardware consists of five linked computers connected to four phone lines. He estimates its costs at only around \$10,000 because he assembled each ma-

chine himself from off-the-shelf components, like a music buff putting together stereo systems.

"When I was in residency," he explains, "that was the only way I could afford to have any of this stuff."

Dr. Del Grosso charges nothing for access or downloaded files, but callers outside the Black Bag's small local calling area must pay long-distance telephone tolls. He does ration online connect time, although users who contribute \$50 per year toward the Black Bag's support receive unlimited access, as do the disabled. (Contributions are payable, if one prefers, to the Mental Health Association of Collegeville.)

"If I had the money," he says, "I'd invest in a direct connection to the Internet. The big barrier for people calling my system is the long distance costs. With a direct Internet connection that could all be avoided. And I'd like about 20 CD-ROM changers and the CD-ROMs of the National Library of Medicine. I could offer online searches for free!"

For physicians, Dr. Del Grosso thinks that the principal value of computer communications lies in continuing medical education. "For example," he says, "you could get all the renal specialists in America together online overnight. Now that's something you can do only once a year."

Meanwhile, his "hobby" brings him frequent online fan mail like this note: "Your board has helped me stay drug free. Posting on Narcotics Anonymous and getting mail has helped in its own way to keep me clean. So thanks for just having that board." ☺

How to Reach Black Bag

To connect to the Black Bag via modem, dial (610) 454-7396. There is no Internet connection, but Internet users can get a copy of the list by sending e-mail to list@blackbag.com. For those on the system known as Fidonet, the address is 2614/ 706. For contributions or other off-line contacts, the Black Bag's "snail mail" address is: PO Box 632, Collegeville, PA 19426.

NLM Unveils Computerized Cadaver on Internet

The National Library of Medicine (NLM) in December released onto the Internet a three-dimensional, computer-generated "cadaver."

Known as "The Visible Man," the cadaver was created from thousands of images of a human body collected with state-of-the-art radiographic and photographic techniques, according to Donald A.B. Lindberg, MD, NLM director. In fact, the composition of the cadaver is so complex that those who wish to download it in its entirety will need up to two weeks of uninterrupted Internet time and 15 gigabytes of computer storage space.

NLM expects the data will be used mainly by medical schools and researchers, but practicing physicians may also find it useful, for instance, to plan surgery, design artificial hips and other man-made body parts, and test various types of medical treatments. While there is no charge to access the data, users are required to sign a licensing agreement with NLM stating how the information will be used. NLM expects to complete the next phase, "The Visible Woman," this year.

For more information, contact Michael Ackerman, PhD, project coordinator, via e-mail at ackerman@hpcc.gov or by phone at (301) 402-4100.

ACTIONS OF THE BOARD OF TRUSTEES, JANUARY 10-11, 1995**SOCIETY LOOKING TO HELP WORKERS' COMP PHYSICIANS**

Though regulations to implement Pennsylvania's new workers' compensation law remain unresolved, the State Society is taking steps on behalf of members treating workers' comp patients.

The Board of Trustees, at its meeting on January 11, authorized Society legal counsel to investigate the feasibility of establishing a program to defend the rights of physicians under the workers' comp system. The program, if implemented, would provide ongoing assistance to physicians through efforts which may include:

- education regarding the law, rights and obligations of providers, and paperwork requirements;
- development of a payment handbook, with updates discussing coding, billing, and other issues; and
- legal referral for individual advice and counsel, and for litigation of medical billing disputes.

Meanwhile, the proposed regulations moved back to the General Assembly in January. For an update, see page 24.

LAWSUIT STALLS NEGOTIATIONS ON CRNP PRESCRIBING

A lawsuit by the Pennsylvania Coalition of Nurse Practitioners has brought to a halt negotiations on draft regulations for prescribing by nurse practitioners. The Society's board in January reaffirmed its support of the stance of the State Board of Medicine, that strict controls are needed for such regulations.

Last fall, the state boards of medicine and nursing agreed on regulations authorizing certified registered nurse practitioner (CRNP) prescribing. Outlined were education requirements for the nurse practitioners, protocols, and physician oversight. But opposition from the nursing community led the nursing board to withdraw its support.

The coalition's lawsuit against both state boards charges that such prescribing rights should have been in effect long ago. Due to the pending lawsuit, and at the advice of its attorneys, the State Board of Medicine does not intend to comment until the lawsuit is resolved.

COMMITTEE TO STUDY PPHP REQUEST FOR SUPPORT

The Society is once again directing attention to the Pennsylvania Physician Healthcare Plan (PPHP), a physician group studying the feasibility of forming a statewide physician-owned and physician-directed health insurance company. The group recently requested Society support of its endeavors and of its promotional efforts.

PPHP is not new to the board or the Society—the House of Delegates voted at its annual meeting last October to endorse “the concept” of such organizations, and delegates learned much about the plan at that time. However, recognizing that many questions remain unanswered since the plan's feasibility study was still in progress in January, the board agreed to the appointment of an ad hoc committee to discuss the plan with PPHP representatives. Also, the committee will consider the logistics and implications of supporting PPHP's request.

The committee, chaired by President John H. Hobart, MD, will present its findings and recommendations to the board this month. (See page 21 for more details.)

MEMBER CONCERNS SPARK REVIEW OF CON PROCESS

In response to members' concerns related to the certificate of need (CON) process for ambulatory surgical facilities (ASFs), the board approved the creation of an ad hoc committee to work on amending the current process in Pennsylvania, which inhibits the development of such facilities in the commonwealth.

Pennsylvania law requires a two-step process before an ambulatory surgical facility may be constructed: 1) the applicant must obtain CON approval for the facility; and 2) the applicant must satisfy state ASF licensure requirements.

The State Society has maintained that the criteria in this process are far too rigid, but Society efforts to modify the requirements have been unsuccessful. The Society made one request that ASFs be allowed to prove their long-term cost effectiveness as part of the CON process; the Department of Health denied the request, citing a lack of conclusive, state-specific data on the cost effectiveness of ASFs.

Physicians, in particular gastroenterologists, otolaryngologists, and plastic surgeons, have complained about being unable to obtain a CON for an ASF and say their patients are complaining about high hospital outpatient operating room charges. Insurance companies are becoming reluctant to pay for certain procedures performed in hospital outpatient surgery centers. State-specific data would ease these problems.

The Health Care Facilities Act requires the State Health Services Plan to be revised on an annual basis, and the Surgical Services Chapter states that beginning in 1995, and every year thereafter, the department will update its projections of unmet need for surgical capacity. The Society's new committee will investigate how the Society can influence the department to modify the Surgical Services Chapter.

PATIENT PROTECTION ACT MOVES TO STATE LEVEL

The board learned that several elements of the AMA's Patient Protection Act, introduced in Congress in 1994, are expected to be introduced at the state level as part of three separate bills.

Among provisions to be included are patient coverage, access, and choice; physician and provider fairness, including credentialing, termination, and appeal issues; and utilization review safeguards. A report detailing the bills will be brought to the board in March for review. (See page 4 for related update.)

Communications Plan Approved for '95

In other action, the board approved a new Society communications plan for implementation in 1995. The plan, which focuses on two-way communication between members and the Society, is one step in the organization's new “membership-driven process.” An article detailing the plan begins on page 12.

The Making of a Physician Organization

Judd A. Mellinger-Blouch

In cities and towns across Pennsylvania, many physicians have come to the realization that only by working together can they maintain a high level of influence over patient care and the business of medical practice. This case history focuses on the efforts of one group of physicians that has been helped by PennMed Member Services Company (PMSCO). The location and the identity of the group have been changed to ensure confidentiality.

Anytown is like many other towns in Pennsylvania. There are brick row homes and a farmer's market and several factories, some thriving and others shut down. It's a mixture of urban, suburban, and agricultural.

In early 1994, several of the physicians from Anytown's medical community began talking about their future role in the local health care delivery system. Several colleagues had sold their practices to Anytown General Hospital (AGH). These physicians had received what seemed like a good price for their practices. In return, they went to work for the hospital, took a small cut in pay, and relinquished all the headaches of running a medical practice.

In addition to the hospital's activity, managed care companies were signing up more subscribers in the Anytown area.

AGH offered to set up a physician hospital organization, but a group of physicians wanted to explore other options before signing their futures over to the local hospital. This group invited representatives from the PennMed Member Services Company (PMSCO) and the Pennsylvania Medical Society to speak with them. The physicians were urged to explore all of their options before making a commitment.

The decision-making process

The physicians, who began calling themselves the Anytown Physician Organization (APO), hired PMSCO to lead them through the decision-making process. PMSCO staff members conducted a mar-

ket assessment over a four- to five-week period. The assessment included a mixture of raw data and interviews. The raw data was gathered from sources including the U.S. census and the Pennsylvania Health Care Cost Containment Council.

When compared with the rest of Pennsylvania, the Anytown area has a fairly robust economy, a population with below-average age and above-average income, and several large employers who would make good customers for an integrated physician network. The data also showed that health providers in the area were good at keeping costs down while maintaining high quality.

Interviews with physicians and employers enhanced the picture presented by the hard data. Physicians told PMSCO that they liked their current practice structures and didn't want a large group practice or other economically integrated organization. The physicians were willing, however, to work together and to accept more risk. Employers made it clear they would be willing to work with a physician organization, but only if it could improve or hold the line on costs, quality, and access.

The market assessment, submitted to the APO steering committee, made it clear that the organization had a strong chance of success if it based its strategy on the needs of the market and then followed that strategy closely.

The question still existed, however, about how such an organization would relate to AGH. The physicians knew a good relationship with AGH was vital. The hospital had to be convinced that organizing physicians would be beneficial to all because it would strengthen joint ventures in contracting and managing risk.

Forming the business plan

Phase II was the formulation of a business plan that would turn APO from an idea into a provider network. Before this could take place, an APO board had to be assembled.

With the guidance of PMSCO, the steering committee selected a nominating committee whose sole duty was to identi-

Mr. Mellinger-Blouch is marketing manager, PennMed Member Services Company.

fy physician leaders who were willing to serve on the board. From this effort, a 13-member board was selected, and four committees—membership, finance, credentialing, and bylaws—were established. Each committee contained one board member and four at-large members.

Because the APO board and other involved physicians each had a different idea of where the group should go, Phase II was a consensus-building process. At one board meeting early in this phase, the chair of the board went around to members and asked them to state aloud their vision for

the organization. One or two members wanted to dive head first into capitation and risk-sharing, while an equally small number wanted to shun capitation and managed care completely.

Most of the board, however, believed in a mix of fee-for-service and capitation. All the board members wanted an organization focused on the patient, providing broad access to high-quality medical services.

PMSCO worked with the board of APO to look at its mission and the findings of the market assessment, and then to develop critical success factors. These are defined as the imperatives most likely to make a difference in the future success of the organization. After much discussion and debate, the APO board decided the following factors are critical to its success:

- establishing an organization with a strong base of primary care physicians, the gatekeepers required by most managed care organizations;
- creating the right incentives to attract and retain primary care physicians—these involve not only remuneration for services, but also involvement in the organization's governance and other incentives designed for retention of primary care physicians;
- marketing to the right segments, such as medium to large employers;
- containing and controlling health care expenditures to establish the reputation of

APO as dealing effectively with the community's health status; and

- establishing at least one or two partnerships with payers, employers, and other key organizations.

Facing difficult issues

Phase II also saw the board committees begin their work; each had to address difficult issues. The finance committee had the thorny issue of pricing the stock for primary care versus specialties. It was finally decided to charge primary care physicians about one-quarter of the price of a special-

ist's share of stock. The lower stock price should attract more primary care physicians, one of the critical success factors mentioned above.

Phase II is now concluding with the completion of a business strategy. In the strategy, the mission, target markets, critical success factors, and vision statement are used as the foundation for developing major goals, objectives, and action steps. This is a blueprint for APO to follow in the future. Of course, the strategy is a flexible document that must be

changed to meet the needs of the evolving marketplace.

A challenging future

APO will soon be ready for Phase III, which is to market itself to the physician community to become a viable organization. The organizing physicians have jump-started this marketing process through their involvement.

The success of APO will be determined by how many contracts and covered lives it can secure in the coming months and years. This would be an overwhelming challenge to an individual or small group of physicians. But by pulling together a sizable number of physicians, all of whom want to deliver high-quality, cost-effective care, APO has a good chance of success. ☐

“PMSCO worked with the board of APO to look at its mission and the findings of the market assessment, and then to develop critical success factors.”

AHCPR HELPING DEVELOP CONSUMER SCORECARD

The Agency for Health Care Policy and Research (AHCPR) is helping the state of Oregon develop a scorecard for consumers' use in selecting health care plans and providers.

The projects stem from an Oregon law that directs the Oregon Health Plan administrator to perform studies that include a proposal for the development of a consumer scorecard for use by plan participants. The projects will test several scorecard formats based on the needs of participants of the plan, a state-supported health insurance program that provides universal access to health care to low-income residents, especially in rural areas.

Research for the 18-month project—which began in January—will include focus groups to gather and synthesize information on the needs of three segments of Oregon Health Plan participants: urban residents, rural residents, and people with the conditions, disabilities, or other characteristics found to be most representative of the plan's population.

AHCPR's regional Rural Center at the University of Washington and its subcontractor, Oregon Health Sciences University, Portland, are carrying out this collaborative project. Based on research, these institutions will design and test several prototype scorecards. Policy options will also be analyzed.

For more information on AHCPR consumer initiatives, contact Sandra K. Robinson, Office of Program Development, AHCPR, 2101 East Jefferson Street, Rockville, MD 20852; or phone (301) 594-1455, or fax (301) 594-2157.

MEDICARE REVISES POLICY ON EMG AND NCV STUDIES

Pennsylvania Blue Shield's Medicare program has clarified its payment policy for electromyography (EMG) and nerve conduction velocity (NCV) studies performed on the same extremity, on the same day, by the same physician.

Confusion has existed since the local combination codes W9591-W9594 were deleted in October 1990 for Medicare. Effective November 1990, Medicare has permitted *separate, itemized* billing for the EMG study and NCV study when

performed on the same extremity, on the same day. In other words, NCV studies and EMG studies should be billed separately using procedure codes 95900-95904 or 95860-95872 as appropriate, according to the number of nerves studied.

Note: This change does not affect Blue Shield's non-Medicare business.

Direct questions about this policy to the Society's Department of Medical Economics at (800) 228-7823 or (717) 558-7823.

BLUE SHIELD WINS CHAMPUS CONTRACT

A unit of Pennsylvania Blue Shield has been awarded a five-year, \$1.7 billion federal contract to provide dental services to dependents of active military personnel, company officials announced in February. The contract, awarded by the Civilian Health and Medical Program of the Uniformed Services (CHAMPUS), covers 1.8 million people nationwide and in U.S. territories.

The Blue Shield subsidiary, United Concordia Companies, Inc., which operates in the mid-Atlantic region while administering all of Pennsylvania Blue Shield's dental business, will assume the program on August 1, 1995. The company won the contract over three other finalists—a California HMO, a partnership of a Kentucky HMO and Blue Cross and Blue Shield of South Carolina, and Delta Dental Plan of California which currently runs the CHAMPUS program.

In a February 8 *Wall Street Journal* interview, Thomas Dzuryachko, chief operating officer of United Concordia, said the contract gives members "total freedom" to pick their dentists. He also predicted the company would "make a small profit" from the new business.

MEDICAL ASSISTANCE HIO REMAINS ON HOLD

HealthChoices, the health insurance organization (HIO) proposed for Medical Assistance (MA) patients in Southeastern Pennsylvania, was to have become operational in late 1994.

Implementation was halted when hospital alliance and patient advocacy groups legally challenged the proposal process. Terms of the settlement are unknown at this time, and there is no word as yet whether Governor Tom Ridge and the newly

elected, Republican-controlled General Assembly will continue the push for managed care for the MA program.

The Society remains concerned over the original proposal because of the arbitrary division of the region into three areas and the lack of adequate patient and provider safeguards, but we are waiting to see the terms of settlement from the lawsuit.

Family Care Network

Twenty-one counties are currently on line with the Family Care Network, a primary care case management program for the under-21 MA population in 60 counties.

Under the program, managed for the Department of Public Welfare (DPW) by Automated Health Systems, Inc., Pittsburgh, primary care physicians, clinics, and hospitals are recruited to become primary care case managers. Eligible MA recipients are then given the choice of providers to serve as their "medical home."

Providers receive a case management fee of \$3 per patient assigned per month; in return, they are to provide care, including the necessary Early, Periodic, Screening, Diagnosis and Treatment visits and services, and immunizations, as well as coordinate specialty care for each assigned patient. Providers are reimbursed for those services at DPW rates in addition to the case management fee.

Response from the provider community has been positive, with the number of physicians and facility providers participating far exceeding original predictions. Recruitment in additional counties continues.

Lancaster Community Health Plan

In related news, the Lancaster Community Health Plan, which will link MA recipients with primary care providers in Lancaster County, is continuing efforts to become operational under a Department of Public Welfare contract.

For more information about HealthChoices, the Family Care Network, or the Lancaster Community Health Plan, call the Society's Department of Regulatory Affairs and Specialty Legislation at (800) 228-7823 or (717) 558-7750.

State Society Explores Managed Care Opportunities

the significance of this issue to State Society members, the board will consider PPHP's request for endorsement and other assistance as a priority discussion during the meeting.

The following questions and answers are provided to help members understand the origins of this initiative, as well as the State Society's activities on this issue.

Q: Has the feasibility of a statewide HMO ever been considered by the State Society, and if so, what was the outcome of those discussions?

A: The concept of a State Society-sponsored health maintenance organization was considered at a special meeting of the House of Delegates in the early 1980s. The House declined action, considering the task of capitalization insurmountable and the risk too great.

But the State Society continued to monitor the health care marketplace, and by the early '90s was aware that the concept needed to be again analyzed in greater depth. In 1994, a feasibility study commissioned by the State Society and conducted by nationally known consultants KPMG Peat Marwick showed the Pennsylvania health care market to be extremely complex and diverse—economically, socially, and demographically.

The recommendation was to initially pursue ventures that would aid Pennsylvania physicians in coping with integration in the health care market, rather than invest the Society's resources heavily in capitalization and risk associated with establishing a statewide HMO. The study did, however, suggest that the Society continue to monitor marketplace changes and efforts by physicians to establish HMOs.

In response to this investigation, the Society board immediately created PennMed Member Services Company (PMSCO), a subsidiary designed to meet the diverse needs of Pennsylvania physicians facing inroads of managed care and marketplace change. (For more on PMSCO, see pages 18-19.)

Recognizing the importance of this emerging issue, the House of Delegates

Pennsylvania physicians are approaching another crossroad this year, one of many they have faced over the past two years. Sometime this spring, a prospectus will be before them for their consideration, outlining the plans of the first statewide, physician-owned health maintenance organization proposed in Pennsylvania, and requesting their support.

Initiated by Gary Brown, MD, a Wyndmoor-based ophthalmologist, Pennsylvania Physician Healthcare Plan (PPHP) concluded a feasibility study in late January to determine if such a managed care entity is viable in a diverse state like Pennsylvania.

PPHP representatives have been in contact with the State Society's staff and officers since the inception of their plan, and were on hand during the board's January 11 meeting for extensive discussion and background information. Following the presentation, the Society's board created an ad hoc committee to further these discussions with PPHP, with a report due back to the board at its March 8 meeting. Recognizing

in October 1994 adopted a resolution on the issue of physician-owned HMO insurance companies:

That the Pennsylvania Medical Society endorse the concept of physicians pursuing the establishment of Pennsylvania physician-owned health care delivery organizations, such as an HMO, PPO, etc., [and] continue to study this matter.

The Society has continued to monitor a wide range of other developments in the state's health care marketplace, watchful of emerging creative solutions.

Q: How did PPHP originate?

A: In his presentation to the Society board, Dr. Brown outlined the history of PPHP, pointing out his concept that "unless physicians try to control dollars, we will lose the ability to manage our patients in the ways we think best. For us, being able to manage patients is the bottom line. We believe that we care more about our patients than the for-profit insurers, existing HMOs, and large hospitals."

PPHP was launched, through Dr. Brown's leadership, with a fundraising initiative last fall to finance the feasibility study. With the study now completed, the group's next step is to seek capitalization by creating an intra-state stock offering to Pennsylvania physicians, similar to an offering in New Jersey. As mentioned, the stock prospectus is expected to reach physicians this spring.

Q: How has the concept of a statewide, physician-owned HMO been received, in general, by Pennsylvania physicians?

A: As PPHP representatives traveled across the state in the past few

months, addressing county, specialty, and other physician groups, State Society leaders have attended many of these meetings and remained in close contact with PPHP representatives. Several county medical societies, including Allegheny and Philadelphia counties, have offered support to PPHP developers. State Society leaders are fully aware of the growing sentiments of physicians that maintaining a leadership position in the health care marketplace is of paramount importance.

Q: Would PPHP be wholly physician owned?

A: According to Dr. Brown, practicing physicians will have the initial option to join, and only physicians will be allowed to purchase voting stock.

Q: How will managing control of PPHP be structured?

A: Details of the management structure are currently being developed by the PPHP board. As soon as this information becomes clear and available, the State Society will provide as much detail as possible for Society members.

Q: When will details of the State Society's decisions regarding cooperation or involvement with PPHP be announced?

A: As previously mentioned, a number of key decisions will be made by the State Society's board at the March meeting. State Society members will be informed of any further details that are available at that time. In addition, the Society will continue to update members about these issues through its monthly publications.

4 PROGRAMS
1 SITE!

LEADERSHIP
TRAINING!

of the Pennsylvania Medical Society
May 2-3, 1995 • Harrisburg Hilton and Towers

♦ TUESDAY, MAY 2, 1:00 PM

KEYNOTE ADDRESS—**Jeff Levine**, CNN correspondent since 1980, covering medical legislation and regulation on Capitol Hill, Washington.

PLENARY SPEAKERS:

"Medicine's Dilemmas"—**William L. Kissick, MD, DrPH**, a participant in Medicare's original drafting in the '60s, is a prolific writer, commentator, and respected adviser on the U.S. health care scene. He is professor of health care systems, the Wharton School, University of Pennsylvania.

"California's Experience with Managed Care"—**Eugene S. Ograd, MD**, president, California Medical Association, speaks from the cutting-edge of health care change.

PLUS...

- Go one-on-one in a session with Society leadership • Enjoy an evening of entertainment
- Next morning, breakfast with the State Society president • Attend information-packed workshops on technology, leadership, practice parameters • Visit exhibitors • Meet colleagues from across the state...ALL FOR ONLY \$70!

COME EARLY FOR ADDITIONAL EDUCATIONAL OPPORTUNITIES*

**Separate registration and fees for sessions below*

♦ MONDAY, MAY 1

- ♦ PAMPAC seminar, 11:00 am, "Techniques Legislators Really Understand."
- ♦ HMSS Seminar, 4:00 pm, "Enhancing Physician Leadership in a Changing World," created by the Leadership Institute of the Society's Educational and Scientific Trust.

♦ TUESDAY, MAY 2

- ♦ HMSS Assembly Meeting, 8:30 am, "How to Overcome Obstacles and Organize Physicians," a presentation by **Dr. Ograd**.

Look for details of all sessions next month in PENNSYLVANIA MEDICINE, and for your registration form in the March issue of Executive Report.

The Pennsylvania Medical Society is accredited by the Accreditation Council for Continuing Medical Education to sponsor continuing medical education for physicians.

The Pennsylvania Medical Society designates this continuing medical education activity for 7.75 credit hours in Category 1 of the Physicians Recognition Award of the American Medical Association and the Pennsylvania Medical Society membership requirement.

All faculty participating in continuing medical education programs sponsored by the Pennsylvania Medical Society are expected to disclose to their program audience any real or apparent conflict(s) of interest related to the content of their presentation(s).

For more information, call the State Society at (717) 558-7750 or (800) 228-7823.

ou're on solid ground with
the Dodson Plan.

More than 75 years ago, Bruce Dodson, Sr. pioneered the concept of the dividend plan for workers' compensation insurance. Dodson Group has been helping businesses like yours save on premium costs ever since.

The Dodson Plan gives you the opportunity to earn a dividend each year, depending on the claim experience of all insured members. We carefully select those who participate, creating the greatest potential for you to save.

Pennsylvania Medical Society endorsed the Dodson Plan in 1973. Since then, participating members have earned a total of \$2,309,240 in dividends. Share in the savings!

You're on solid ground with Dodson.

1-800-825-3760

Kansas City, MO 64114

**WORKERS' COMP REGS
MOVE BACK TO LEGISLATURE**

Proposed regulations to implement Pennsylvania's new workers' compensation law are still not in place, despite a year-and-a-half of drafting and two months of active debate.

The regulations, proposed by the Department of Labor and Industry to implement the medical cost containment provisions of the Workers' Compensation Act, were in the drafting process since shortly after the law was signed in July 1993. They were rejected by the Independent Regulatory Review Commission (IRRC) on November 29, 1994, and went back to the department for revision.

Instead of recommending revisions, the department resubmitted the regulations without changes, forcing them back into the legislative process. On Inauguration Day, the regulations were withdrawn by the department.

The Society supported many of the provisions of the original regulations, including those intended to:

- 1) clarify the ambiguities of the statute; and
- 2) correct problems experienced by physicians and others in providing medical care under the act, and receiving fair and prompt payment for their services.

The Society continues its support with even more urgency, recognizing the overwhelming need to have the regulations in place to govern insurers' practices.

The Society will continue to work for additional modifications. Some physicians believe the current regulations give too much power to the referee in the appeals process and that the provisions for peer review are not strong enough, giving support to the criticism that physicians do not sufficiently police themselves.

At press time, the regulations are suspended, awaiting action by the newly designated secretary of labor and industry. The Society was in the middle of talks with the insurance federation—which has said it would actively lobby against the regulations—to find common ground to permit the regulations to move forward quickly.

Look for updates on the issue in future Society publications; for more information on current State Society efforts on behalf of members treating workers' comp patients, see page 16.

Q&A: Workers' Compensation

Q: Why is the workers' compensation rate for 1995 based on the 1994 Medicare allowance, and how is the rate calculated?

A: During legislative debate over changes to the Workers' Compensation Act, providers strongly objected to the use of the Medicare payment system as the basis for payment for medical care under workers' compensation as it had been used under the automobile law. Legislators responded to those objections by freezing the payment system at a point in time (December 31, 1994). Changes to the payment levels commencing January 1, 1995, would reflect changes in the Statewide Average Weekly Wage (SAWW). Those changes would be cumulative after 1995.

To calculate payment, take the amount that would have been paid as of December 31, 1994 (113 percent of the 1994 Medicare participating provider allowance), multiply that figure by 3.2 percent (the SAWW percentage change). The total is what you should expect to receive for services performed on or after January 1, 1995.

Unlike the auto law, there is no authorized delay for insurers to update their payments. Insurers were advised of the 3.2 percent increase by notice from the Department of Labor and Industry in December and through published notice in the *Pennsylvania Bulletin* (January 7, 1995).

Physicians should submit their regular charges for services provided on the current HCFA 1500 claim form, together with the Medical Report Form (LIBC 9), to the insurer. The report form is to be submitted within 10 days of initiating treatment and at least every 30 days for the duration of treatment. If the correct payment is not received within 36 days of submission, unless the necessity of the services has been challenged, physicians should file an Application for Fee Review (LIBC 507) with the Bureau of Workers' Compensation. For more information, call Don McCoy, the Society's director of regulatory affairs and specialty legislation, at (800) 228-7823 or (717) 558-7750, ext. 448.

**PAMPAC ELECTS
1995 LEADERS**

George Buerger, MD, has been elected chairman of the Pennsylvania Medical Political Action Committee (PAMPAC) for 1995. He replaces Andrew Gurman, MD, whose tenure on the board has expired.

Dr. Buerger, a Pittsburgh ophthalmologist, has served the PAMPAC board in other capacities for three years. He also represents the Thirteenth District, Allegheny County, on the board.

Other officers elected include: Richard T. Bell, MD, Second District, as vice chair; Jay L. Funkhouser, MD, Tenth District, as assistant treasurer; Elizabeth Twigg, Pennsylvania Medical Society Alliance (PMSA) Central Region, as secretary; and Andre C. Blanzaco, MD, as the at-large member of the executive committee.

Newly elected as an at-large member of the board is Robert Murphy, MD, who is replacing Leland Patterson, MD. Also, the board re-elected Dr. Blanzaco, Robert Mathews, MD, and Mark Friedlander, MD, as at-large members of the board.

Other members of the board include: Karl R. Myers, MD, First District; Carmen A. Brutico Jr., MD, Third District; Carl J. Forster, DO, Fourth District; Richard D. Baltz, MD, Fifth District; Raj G. Kansal, MD, Sixth District; Daniel E. Hill, MD, Seventh District; David F. Dieteman, MD, Eighth District; Paul Burton, DO, Ninth District; Thomas J. Strunk, MD, Eleventh District; and Joseph G. Ciotola, MD, Twelfth District. Eileen Plundo, PMSA Western Region; Judy Bucko, PMSA Eastern Region; and Mrs. Twigg are PMSA representatives on the board. Jerry L. Rothenberger is treasurer.

For more information about PAMPAC—what it is, what it does, and how you can become more involved—call Larry L. Light, executive director, at (800) 228-7823, ext. 452, or (717) 558-7822.

PAMPAC Workshop

Plan to attend "Techniques Legislators Really Understand," May 1, 1995, just prior to the Society's 1995 Leadership Conference. See pages 22 and 32 for details.

Update On The Diagnosis And Treatment Of Cardiovascular Disease

- State-of-the-art coronary interventions –
- Advanced cardiac techniques –
- New clinical concepts –

A unique educational opportunity—with nationally known cardiologists!

Program Director:

Vidya S. Banka, M.D.

Medical Director and Chief, Division of
Cardiology, Episcopal Heart Institute
Clinical Professor of Medicine, Medical College
of Pennsylvania and Hahnemann University
Philadelphia, PA

Co-Directors:

Peter S. Fail, M.D.

Marriyam Moten, M.D.

Vasundhara Sharma, Ph.D.

Gerardo Voci, M.D.

DISTINGUISHED GUEST SPEAKERS

John Ambrose, M.D.

Professor of Medicine, Mount Sinai School of
Medicine
Director, Cardiac Catheterization Laboratory
The Mount Sinai Medical Center
New York, NY

Kanu Chatterjee, M.B., F.R.C.P.

Professor of Medicine and
Luci Stern Professor of Cardiology
University of California, San Francisco,
School of Medicine
San Francisco, CA

Peter R. Kowey, M.D.

Professor of Medicine, Jefferson Medical
College of Thomas Jefferson University
Chief, Division of Cardiovascular Diseases
Lankenau Hospital and Research Center
Philadelphia, PA

Herbert J. Levine, M.D.

Professor of Medicine, Tufts University School
of Medicine
Division of Cardiology
New England Medical Center
Boston, MA

Navin C. Nanda, M.D.

Professor of Medicine and
Director, Heart Station/Echocardiography-
Graphics Laboratories
The University of Alabama School of Medicine
at Birmingham
Birmingham, AL

SYMPOSIUM LEARNING OBJECTIVES

After attending this seminar, you will be able to:

- Identify the pathogenesis of coronary atherosclerosis.
- Select appropriate interventions for coronary stenotic lesions.
- Manage congestive heart failure using the latest advances.
- Access the continuing advances in the management of supraventricular arrhythmias.
- Use the continuing advances in the field of Echocardiography to diagnose and treat patients.
- Relate the newer concepts in antithrombotic therapy for prosthetic heart valves and atrial fibrillation.

The symposium will be suitable for Cardiologists, Physicians in Internal Medicine practice, Internal Medicine Residents, Cardiology Fellows, Cardiovascular Surgeons and Family Practice Physicians.

CURRENT TRENDS IN CARDIOLOGY Symposium

A P R I L 2 2 , 1 9 9 5

PROGRAM

- Mechanism of Coronary Atherosclerotic Disease Progression and Unstable Syndromes
- Lesion Specific Approach to Coronary Interventions
- Clinical Decision Making in Congestive Heart Failure
- Antithrombotic Therapy for Atrial Fibrillation and for Prosthetic Heart Valves
- Clinical Relevance for Advancing Techniques in Echocardiography
- Radiofrequency Ablation of Arrhythmias: How Far Have We Come?

Workshops – Meet The Experts

- Holmium Laser, Rotational Atherectomy
- Stents, Directional Atherectomy
- Gene Therapy, Restenosis Research
- Anticoagulation Strategies
- Transesophageal Echocardiography
- Dobutamine Echocardiography

Presented annually by the Episcopal Heart Institute and jointly sponsored by The Medical College of Pennsylvania and Hahnemann University, the Symposium is recommended for:

- Cardiologists
- Internal Medicine Physicians
- General Practice Physicians
- Cardiac Care Professionals

Date: Saturday, April 22, 1995

Place: Four Seasons Hotel
Philadelphia, Pennsylvania

EPISCOPAL HOSPITAL

Current Trends in Cardiology is a unique opportunity to be updated on some of the important choices in diagnostic and management strategies for patients with cardiovascular diseases.

In addition to the educational and informational opportunities, you'll have time to socialize with colleagues and enjoy the humor of Elaine M. Lundberg, M.A., humor therapist, during the luncheon program.

INNOVATIVE TEACHING TECHNIQUES

Material will be taught through the use of the following:

- Audio/Visual presentation using 2 x 2 slides, audience participation and discussion.
- Audio/Visual presentations using Video tapes of actual cases showing interesting Echocardiograms, Transesophageal Echocardiograms and Cine films.
- Audio/Visual presentations of various newer techniques in Interventional Cardiology.
- Hands on training in the workshops by experts in the field of Interventional Cardiology techniques and Echocardiography techniques.

REGISTER TODAY!

The registration fee includes all course materials, continuing medical education credits, continental breakfast, breaks, luncheon and "Meet the Faculty" cocktail reception.

Registration Fee:

Physicians: \$60.00
Physicians In Training: \$25.00

Proof of residency status is necessary at time of registration.

Allied Health Professionals \$50.00

For More Information—Contact the office of Vidya S. Banka, M.D., at 215-427-7247, or fax to 215-427-7358.

Episcopal Heart Institute/Episcopal Hospital is located at 100 East Lehigh Avenue, Philadelphia, PA 19125-1098, 215-427-6200.

Accreditation:

ACCME STATEMENT—The Medical College of Pennsylvania is accredited by the Accreditation Council for Continuing Medical Education to sponsor continuing medical education for physicians.

AMA/PRA DESIGNATION STATEMENT—The Medical College of Pennsylvania designates this continuing medical education activity for 6.5 credit hours in Category 1 of the Physician's Recognition Award of the American Medical Association. Medical College of Pennsylvania will award .65 CEU's to each participant who successfully completes this course or conference. Our program uses the standards and guidelines outlined by the International Association for Continuing Education and Training.

DISCLOSURE STATEMENT—In accordance with the Accreditation Council for Continuing Medical Education (ACCME) and the Association of the American Medical Colleges (AAMC) standards and the policy of The Medical College of Pennsylvania and Hahnemann University, presenters are asked to indicate if they have any relationship which, in the content of their presentation, could be perceived as a real or apparent conflict of interest, (e.g. ownership of stock, honoraria or consulting fees). Any such relationship will be disclosed to the audience and consideration will be given to the possible influences on the physician's presentation.

Understanding Your Graduated Dues Discount

William J. West Jr., MD

One area of particular interest to young physicians is membership in organized medicine. But dues have traditionally been a sticking point, preventing involvement of some.

For some time, the State Society has offered a first- and second-year-in-practice discount for physicians starting out. Initiated by the Society's Council on Membership in the early 1980s, the program provides a discount and an incentive for young physicians to join early in their careers.

This year, we are excited to be able to offer a first-, second-, third-, and fourth-year-in-practice dues discount. The Young Physicians Section (YPS) Governing Council is proud of its efforts in every step of this process.

For several years, the council has been contacting young physician members and nonmembers to discuss their concerns. The Governing Council continually heard that the cost of membership was the main reason young physicians were not joining. The council also noted that some members dropped their membership as soon as their two-year discount period ended, to avoid paying the full price of dues.

At its 1992 meeting, YPS assembly members considered a resolution to change the dues discount from two years to four years for young physicians. The assembly did not pass the resolution, but determined that there was a better way to accomplish its intent. The assembly asked the YPS Governing Council to work internally with the Council on Membership to address the issue of extending the length of time young physicians had until they must pay full dues.

At that time, Arthur Stein, MD, who was YPS vice chair, served on the Council on Membership and was instrumental in getting its members to discuss the issue. The council was already considering other dues discount categories and was very receptive to Dr. Stein's request on behalf of the section. Although seemingly a simple request, it took some time to accomplish this goal.

The Council on Membership formally recommended to the Board of Trustees that a graduated dues discount of four years would be in the best interest of the State Society in attracting new young physician members. The board, in turn, recommended to the House of Delegates that the Society increase the length of time for young physicians to pay full dues and that a four-year dues discount be implemented. The House adopted this with a bylaws change; there was a year layover for implementation.

We need your help.

We need to get the word out to our colleagues about this dues discount; we realize the best way to do that is

by word of mouth. Think about it: How much do you pay attention to your mail?

I would like to see each young physician member contact others about the graduated dues discount. Unless they know about it, they won't take the next step: Just tell them to call the State Society's Department of Membership at (800) 228-7823, extension 276, for information.

The members of the YPS Governing Council also invite your comments. See the box below for a listing of council members, their county locations, and their business telephone numbers.

We don't ask much action of our members throughout the year; yet, every little effort you make to promote the YPS and the State

About the YPS

The Young Physicians Section (YPS) was created in 1986 to provide a voice for young physicians across the state. Physicians who are 40 and under or in the first five years of practice are eligible to participate in the section. The YPS, which addresses issues of particular interest to young physicians, is governed by a council that carries out the section's programs and policies.

The section holds an assembly meeting each October prior to the State Society's House of Delegates. At this meeting, delegates from each county elect the YPS Governing Council, as well as delegates and alternate delegates to attend the Society's House of Delegates and the AMA-YPS annual and interim meetings. Resolutions of special interest to young physicians are also considered and adopted at the assembly meeting.

Members of the 1994-95 YPS Governing Council include:

Chair: William J. West Jr., MD (Berks), 610-376-6668

Vice Chair: Mark A. Piasio, MD (Clearfield), 814-768-2225

Secretary: Mary J. Hudak, MD (York), 717-244-4594

Delegates:

Jeffrey H. Baker, MD (Centre), 814-231-4560

Chris W. Fellin, MD (Montour), 717-271-6211

Marlon T. Maus, MD (Philadelphia), 215-928-1417

Martin D. Trichtinger, MD (Montgomery), 610-886-0174

Young Physician Trustee: Robert M. McNamara, MD (Montgomery), 215-842-6548

Member-at-Large: Daniel J. Glunk, MD (Lycoming), 717-321-2284

Alternate Delegates:

Joseph K. Izes, MD (Montgomery), 215-884-7114

Andrew R. Levette, MD (Montgomery), 215-576-2335

Carl A. Sirio, MD (Allegheny), 412-647-2335

Past Chair: Arthur V. Stein, MD (Lehigh), 610-437-5438

Renee Edinger

Career Counselor Renee Edinger will lead a workshop on "Managed Care—The New Career Paradigm" during the State Society's Leadership Conference, "Coping with Kaleidoscopic Change," to be held May 2-3, 1995, at the Harrisburg Hilton and Towers.

Edinger is vice president of physician search, Cejka & Company, St. Louis, Missouri. The workshop, coordinated with the Young Physicians Section, will include an overview of the current health care marketplace and a discussion of what it means for physicians to be "employees."

For more information, see pages 22 and 32.

Society gets us one step further to helping all the young physicians of Pennsylvania. Think of how much more we could accomplish if every young physician in the commonwealth joined together to work for a better tomorrow.

Dr. West, a Wyomissing obstetrician/gynecologist, is chair of the Society's Young Physicians Section.

NOMINATIONS SOUGHT FOR YPS SERVICE AWARD

The AMA Young Physicians Section is accepting nominations for the 1995 AMA-YPS Community Service Award, which recognizes and encourages excellence in community service activities carried out by young physicians.

Examples of projects which may be submitted are as diverse as a medical/legal clinic for the homeless, a natural science ambassador project, a monthly health education cable TV show, pre-participation sports examinations for needy children, sample pharmaceuticals donated to a clinic for the indigent, drug abuse prevention programs, volunteer activity at AIDS clinics, involvement in medical missions to other countries, or flood/hurricane relief projects.

For additional information or a nomination form, call the AMA Department of Young Physician Services at (312) 464-4749. All entries must be postmarked by April 1, 1995.

GUIDE OFFERS RESOURCES FOR NEW YOUNG PHYSICIANS

The AMA-YPS has compiled "Guide to AMA Services and Resources for Young Physicians Entering Practice," a booklet of existing products of special interest to senior

residents or physicians just entering practice.

Included is information on practicing in managed care settings, contract negotiation, practice management, equipment leasing, physician reimbursement, practice guidelines, insurance needs, continuing education, career resources, and risk management. Some materials listed are free; others are available at reduced costs for AMA members.

For a free copy of the guide, call the AMA Department of Young Physician Services at (312) 464-4978.

MANAGING PRACTICE IS FOCUS OF COUNCIL OFFERINGS

The Pennsylvania Medical Society's Council on Medical Practice offers a number of seminars and publications designed to help physicians better manage their practices.

Seminars

Upcoming practice management seminars include:

- "Managing Managed Care"—March 28-30 in Pittsburgh, Harrisburg, and Philadelphia.

- "Complying with OSHA Blood Borne Pathogen Regulations"—April 4-6 in Philadelphia, Harrisburg, and Pittsburgh.

- "How to Run a More Profitable Practice"—April 18-20 in Pittsburgh, Harrisburg, and Philadelphia.

For more information, or to register, call (800) 228-7823 or (717) 558-7750, extension 258.

Publications

Practice management publications available include:

- "Employment Law: A Guide for Pennsylvania Physicians"—This recently updated manual includes chapters on wages and overtime, hiring and terminating employees, unemployment compensation, and benefit plans.

- "Laws and Regulations Affecting Medical Practice"—This 48-chapter manual, which includes a new chapter on the Americans with Disabilities Act, is a highly valuable reference for any medical practice.

- "1995 Practice Management Software Comparison"—This guide includes purchasing guidelines, hardware specifications and pricing, and in-depth information on several software programs. It is available free of charge to State Society members.

- "Employment Contracts: A Guide for Pennsylvania Physicians"—This publication includes helpful information for physicians who contract with employees or who are themselves an employee.

For more information, or to place an order, call (800) 228-7823 or (717) 558-7750, extension 456.

Fax-Back Coupon

The Young Physicians Section, the Society's Hospital Medical Staff Section, and The Institute for Physician Leadership are cosponsoring a program on Monday, May 1, 1995, prior to the Society's Leadership Conference, on

"Enhancing Physician Leadership in a Changing World."

For more information about the program, see page 33; or fax this coupon to Christina Reese at (717) 558-7842.

ANTI-SMOKING EFFORTS CONTINUE AT FARM SHOW

For the third year in a row, the State Society participated in the Pennsylvania Department of Health's Youth Against Tobacco (YAT) campaign at the 79th Annual Pennsylvania State Farm Show in Harrisburg in January.

Approximately 8,600 people visited the YAT booth, where teenagers signed pledges not to use tobacco products. Promotional items, including posters and luggage tags, were distributed to teens, educators, and other visitors to the booth as well.

Several members of the Society's staff volunteered their time to man the booth, along with volunteers from the Department of Health, Department of Education, and the state chapter of the American Cancer Society.

STATS

From 1992 to 1993, daily smoking prevalence increased among high school seniors from 17.2 percent to 19 percent.

Source: CDC. Cigarette smoking among adults—United States, 1993. *MMWR* 43(5):928, 1994.

LIVING WILL KIT AVAILABLE FREE TO MEMBERS

The Pennsylvania Medical Society's Council on Education and Science has compiled a "Physician Living Will Information Kit" to help physicians understand and properly address living wills with their patients.

Included in the kit are: a copy of Pennsylvania's Advance Directives for Health Care Act, articles explaining the act, professional viewpoints on malpractice issues, related AMA and State Society policies, levels of care guidelines, tips on how physicians can talk with patients about advance directives, a copy of the Society's "Dignity in Life, Dignity in Death" brochure, and other resources.

For more information, or to receive a kit, call the Society at (800) 228-7823 or (717) 558-7750, extension 443.

AHCPR NEWS

MEDICAID CAP ON DRUGS COST MORE THAN IT SAVED

Limiting Medicaid reimbursement to three drug prescriptions per patient per month markedly increased emergency and acute care services for non-institutionalized, schizophrenic patients who were unable to pay for the additional psychotropic drugs they needed. The cost-cutting initiative cost Medicaid 17 times more than it saved in prescription drug costs, concludes a study supported by the Agency for Health Care Policy and Research (AHCPR).

Harvard researchers linked Medicaid claims data for 42 months with clinical records from two community health centers and a psychiatric hospital in New Hampshire. Their analysis showed that the cap resulted in immediate reductions of 15 to 49 percent in the use of psychotropic drugs. The cap also resulted in coincident increases of one to two visits per month to the health centers and a sharp increase in the use of emergency mental health services and partial hospitalizations.

After the cap was discontinued, the use of medications and most mental health services reverted to pre-cap levels.

CABG SURGERY CONTRIBUTES TO DECLINE IN DEATHS

Coronary heart disease deaths in the U.S. declined by over 40 percent between 1963 and 1985, and according to researchers, coronary artery bypass graft (CABG) surgery contributed modestly to this decline.

The researchers abstracted from the medical records of Minneapolis-St. Paul area residents undergoing CABG surgery between 1970 and 1984 to compare the annual mortality rates of these patients with estimates of their expected survival rates had they not undergone surgery. The researchers estimate that the surgical contribution to annual reductions in heart disease deaths gradually increased from a negative 0.2 percent increase in deaths in 1970 to a positive 6.6 percent reduction in deaths in 1984.

This change appears to be related to an increased frequency of CABG surgery, improved outcomes following surgery, and a more severely ill mix of CABG patients whose survival is more likely than that of less ill patients to be

improved by surgery, according to the researchers.

However, it is questionable whether the contribution of CABG surgery to the decline in heart disease deaths continued to increase through the late 1980s and early 1990s. Other therapeutic approaches—angioplasty, atherectomy, and thrombolytics—whose use proliferated during this period, also may have contributed to improved survival of these patients.

AHCPR News is excerpted from the December 1994 issue of "Research Activities," published by the Agency for Health Care Policy and Research, Rockville, Maryland.

NEW MEDICATION TREATS ALCOHOL DEPENDENCE

The U.S. Food and Drug Administration has granted clearance for the sale of REVIA™ (naltrexone HCl), a new pharmaceutical to treat alcohol dependence.

In studies, funded by the National Institute on Alcohol Abuse and Alcoholism at the medical schools of the University of Pennsylvania and Yale University, treatment with naltrexone supported abstinence, prevented relapse, and decreased alcohol consumption. In addition, patients in comprehensive treatment programs who were treated with naltrexone reported a decrease in craving.

Other studies indicate that REVIA, an opioid-receptor antagonist, is non-habit forming and is not a drug of abuse. The most common side effect found in studies was nausea, though some patients reported difficulty sleeping, anxiety, nervousness, abdominal pain/cramps, low energy, joint and muscle pain, and headache.

REVIA is a product of the DuPont Merck Pharmaceutical Company.

Report Discusses Morbidity, Mortality of Dialysis

A National Institutes of Health (NIH) consensus development statement on "Morbidity and Mortality of Dialysis" is now available from the NIH Office of Medical Applications of Research.

The statement contains recommendations and conclusions concerning kidney disease.

To receive a free copy of the statement, call the NIH Office of Medical Applications of Research at (301) 496-1143.

Full Disclosure Statement: All faculty participants in continuing medical education programs sponsored by Hahnemann University are expected to disclose to the audience any real or apparent conflict(s) of interest related to the content of their presentation.

Statement of Accreditation: Hahnemann University is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to sponsor continuing medical education programs for physicians. Hahnemann University designates each hour of attendance at these activities as 1 credit hour of Category 1 of the Physician's Recognition Award of the American Medical Association.

Specialty Scientific Meetings: Time for Critical Review

David Woods

There was a time when theater audiences routinely hurled apple cores or orange peels at actors whose performances they judged to be unworthy. Professional critics have continued the practice using verbal missiles, and in her entertaining book, *No Turn Unstoned*, actress Dame Diana Rigg catalogs several of the most deadly of these. They include: "The play opened at 8:40 sharp and closed at 10:20 dull"; "A bad play saved by a bad performance"; and Walter Kerr's terse dismissal of "I am a Camera"—"Me no Leica."

Most medical specialties and subspecialties hold annual or semi-annual scientific meetings and, while I'm not suggesting for a minute that the same critical barbs be aimed at their protagonists, I do believe that the time has come for honest and stringent appraisal. Such meetings will never improve so long as rambling, inaudible, or boring speakers are accorded the same polite applause as those whose words gladden the ear and stimulate the mind.

Having dutifully attended scores, perhaps hundreds, of medical meetings as a reporter, I must tell you that there can be no purgatory in the hereafter for those who write and edit. It exists here and now, and, most particularly, in hotel conference rooms where drowsy audiences succumb to numbing illogic, tortured syntax, and, in many instances, the slings and arrows of outrageous slide presentations.

In a recent piece in the *Canadian Medical Association Journal*,[†] my old friend and fellow scribe, Douglas Waugh, MD, former executive director of the Association of Canadian Medical Colleges, noted that "the people who attend medical meetings are a remarkably tolerant and forgiving lot. In the interest of keeping ourselves au courant with our world of science," he went on, "we...sit in mesmerized silence while our peers recount their scientific triumphs, or tell us how to do our work better."

Dr. Waugh recounts how at one recent meeting he attended, "We were offered

some excellent science, but its impact was seriously impaired by the appalling quality of at least half the presentations." The remark he heard most often was: "Those of you in the back of the room won't be able to see this slide, but..."

Dr. Waugh concluded with the plea: "Is it asking too much to suggest that skill in communicating with an audience be a prerequisite for membership in the presenters' club?"

Those planning specialty meetings can bring some imagination to the task by inquiring of those likely to attend them what subjects they would like to hear about and then matching those subjects to speakers of demonstrated ability. Didactic presentations, unless about the secrets of the universe, should be limited to 30 minutes, and slides should be professionally produced and presented, visible from all areas of the room, and left on the screen long enough to be read. When the speaker has finished, members of the audience should be encouraged to rate the performance then and there.

Beyond such rating, an exercise that in some instances might be the genteel equivalent of throwing apple cores or orange peels, specialty societies might appoint a "meetings critic" who would not only collate the written opinions of the audience, but also write a frank critique in the society's journal of the meeting's content and value—and high and low moments.

Of course, scientific meetings do not consist only of formal presentations. Many who attend them would agree that their greatest value is to be found in the social areas where exchanges about matters of common professional interest are often more relevant and rewarding.

But even these encounters in what used to be called the "smoke-filled rooms" might take on more focus and clarity if there has been some sparkle and fire at the podium, too. ☐

Mr. Woods, former editor and publisher of the *Canadian Medical Association Journal*, is president of *Healthcare Media International, Inc.*, Philadelphia, and a frequent commentator on health care issues.

The Presbyterian Medical Center of Philadelphia is accredited by the Pennsylvania Medical Society to sponsor continuing medical education for physicians.

All faculty participating in continuing medical education programs sponsored by Presbyterian Medical Center of Philadelphia are expected to disclose to the program audience any real or apparent conflict(s) of interest related to the content of their presentation(s).

CNN'S Levine to Speak at Leadership Conference

Jeff Levine

CNN Medical Correspondent **Jeff Levine** will present the keynote address at the State Society's 1995 Leadership Conference, "Coping with Kaleidoscopic Change," to be held May 2-3 at the Harrisburg Hilton and Towers.

Levine, who joined CNN in 1980, is based in the network's Washington, DC, bureau, where he follows medical legislation and regulation activities on Capitol Hill. His speech on day one is sure to include his impressions of health care's "big picture," drawing upon his experiences in Washington. He is also expected to take a look at current health care trends before offering a look at the future.

Dr. Ogrod

Following the keynote address, **Eugene S. Ogrod, MD**, president of the California Medical Association will discuss "California's Experience with Managed Care," focusing on how health care has changed in California during the past decade.

Dr. Kissick

William L. Kissick, MD, DrPH, professor of health care systems at the Wharton School, University of Pennsylvania, Philadelphia, and a participant in Medicare's original drafting in the 1960s, will conclude the first day's formal presentations with "Medicine's Dilemmas." In his book of the same title, Dr. Kissick offers guidelines for understanding the issues of, and implementing alternatives to, the current "health care crisis." He writes that Americans cannot expect "to have it all" and

advocates examining health care systems—local, state, and national—already in place in the United States. His presentation will touch upon some of these same points.

An open forum with State Society leaders and breakout sessions with Levine, Dr. Ogrod, and Dr. Kissick are also scheduled on day one. Evening activities include a PAMPAC-sponsored dinner and a "Vegas-style" variety show featuring Pennsylvania's own Charlie Prose.

Day two of the conference offers a somewhat different format from day one. During breakfast, State Society President John H. Hobart, MD, will present the annual presidential address, and the Society will honor its second annual Physician Volunteer Award recipient.

Wednesday morning, participants will attend workshops on specific issues related to the changing health care environment and to develop individual skills.

- Gordon Smith, Esq., executive vice president of the Maine Medical Association, will lead an informational workshop on "Practice Parameters." This workshop is supported in part by a grant from the Martin A. Murcek, MD, Fund of the Society's Educational and Scientific Trust.

- Michael Kurtz, PhD, president of Training Education & Consulting Services and an organizational psychologist working in the areas of organizational development, team building, and conflict resolution, will discuss "Leadership and Team Development" as it relates to physician-hospital organization (PHO) development, as well as physician leadership/management role changes. This workshop is made possible by a gift from the Institute for Physician Leadership and the Upjohn Company.

- Michael Lance, executive director and chief operating officer of the PennMed Member Services Company (PMSO), will discuss "How

Established Solo Practices Can Form Groups."

- An attorney specializing in antitrust issues will lead a workshop on "New Antitrust Developments Affecting Physicians." This workshop is being coordinated with the Society's Hospital Medical Staff Section (HMSS) Governing Council.

- William Greenberg, MD, founder and senior vice president of Physicians' Online, the first national online network offering medical information, and a licensed physician in New York, will offer a 40-minute presentation on "Empowerment Through Electronic Information." State Society Trustee Edward A. Dench, MD, will host the workshop and lead a question-and-answer session following Dr. Greenberg's presentation.

- Career Counselor Renee Edinger will lead a workshop on "Managed Care—The New Career Paradigm." Coordinated with the Society's Young Physicians Section, this workshop will include an overview of the current health care marketplace and a discussion of what it means for physicians to be "employees."

To register

Deadline for registrations is **March 31**. Registration fees are: \$70 for Society members, \$35 for residents, and \$115 for nonmembers; medical students may register free of charge.

Registration forms were sent to all Society members in the February and March issues of *Executive Report*. For additional information, call the Society's Department of Member Communications at (800) 228-7823 or (717) 558-7750.

Credit information: The Pennsylvania Medical Society has designated this continuing medical education activity for 7.75 hours in Category I of the Physicians Recognition Award of the American Medical Association and the

STANDARDS GUIDE TREATMENT OF PATIENTS WITH DIABETES

The American Diabetes Association (ADA) in 1993 published its revised "Standards of Medical Care for Patients with Diabetes Mellitus," which define basic medical care for people with the disease.

Diabetes is the fourth leading cause of death by disease in the U.S. and a leading cause of adult blindness. Each year, 650,000 new cases are diagnosed; yet, of the 14 million people with diabetes in the U.S., half are undiagnosed.

In Pennsylvania, more than 600,000 residents are estimated to have diabetes, only half of whom have been diagnosed. Diabetes contributes to the deaths of more than 11,500 Pennsylvanians every year. In 1992, the direct and indirect cost of diabetes statewide was approximately \$4.7 billion.¹

Diabetes is a complex chronic illness that requires continuing medical care and self-management education to prevent acute complications and reduce the risk of long-term complications. Ideally, people with diabetes should receive their care and treatment from a physician-coordinated team that consists of physicians, nurses, dietitians, and mental health professionals with expertise in diabetes.

Team members must have the information and resources they need to develop an aggressive, personalized management plan, particularly in light of the convincing evidence of the Diabetes Control and Complications Trial (DCCT).²

The ADA's revised standards appear in *Diabetes Care* 17:616, 1994. Free reprints of the article are available by calling the Professional (Pennsylvania) Diabetes Academy at (800) 228-7823 or (717) 558-7750, extension 271.

Contributed by Kathleen Dwyer, PhD, RD, assistant executive director and academic program coordinator, Pennsylvania Diabetes Academy.

MAJOR CANCER CENTERS FORM NATIONAL NETWORK

Thirteen of the nation's leading cancer centers announced on

Leadership Conference '95: Related Offerings

On Monday, May 1, the Pennsylvania Medical Political Action Committee (PAMPAC) is sponsoring "Techniques Legislators Really Understand." This workshop, which begins at 11:00 a.m., will provide participants with skills for more effective lobbying of state and federal legislators on issues of quality and access.

State Senator John E. Peterson (R-Venango), chairman of the Senate Public Health and Welfare Committee, will speak at lunch on the health care agenda. Also scheduled are a panel discussion and role playing.

A fee of \$15 covers the cost of lunch. For more information, or to register, call PAMPAC at (717) 558-7822.

Later that day, the Society's Hospital Medical Staff Section (HMSS) and the Young Physicians Section (YPS) will join with The Institute for Physician Leadership to present "Enhancing Physician Leadership in a Changing World." This four-hour seminar will provide physicians involved in the formation of physician organizations, physician-hospital organizations, independent practice associations, merging group practices, and other coalitions, with additional tools and techniques to enhance peer cooperation and organizational cohesiveness.

One tool which will be examined is the Myers-Briggs Indicator, a nationally recognized measure of personality, and how it can help physicians individually and in their work, as well as how they can use it to help others. Participants will also learn how to: engage in active listening to manage conflict, employ "non-verbals" to enhance communication, design effective teamwork scenarios, test decision-making by consensus, and identify the best traits of successful leaders.

Presenters include Mike Magee, MD, senior vice president, Pennsylvania Hospital, and professor of surgery, Jefferson Medical College of Thomas Jefferson University; and Tim Brigham, PhD, assistant dean for graduate and continuing medical education, Jefferson Medical College.

The Pennsylvania Medical Society has designated this continuing medical education activity for four hours in Category I of the Physicians Recognition Award of the AMA and State Society membership requirements.

The cost of the seminar, which includes dinner, is \$130 for Society members and \$165 for nonmembers; quantity discounts are available. To register, call the Society's Department of Meeting Services at (800) 228-7823. Registration deadline is April 14.

The 22nd Assembly Meeting of the Hospital Medical Staff Section will be held Tuesday, May 2, from 8:30-11:30 a.m. Featured is, "How to Overcome the Obstacles and Organize Physicians," in which Eugene S. Ogrod, MD, president of the California Medical Association, will speak on the problems encountered in organizing physicians and how to resolve them. The meeting will also include an open forum in which participants can discuss critical issues confronting medical staffs.

Each hospital staff in Pennsylvania may send one voting representative to the meeting; alternate representatives are also encouraged to attend. For additional information, call (800) 228-7823, extension 457.

January 13 the creation of the National Comprehensive Cancer Network (NCCN), an alliance that will develop and institute standards of care for the treatment of cancer, and develop outcomes research. NCCN's goal is "to ensure the delivery of high-quality, cost-effective

services to cancer patients across the country."

The network will focus its long-term efforts on developing programs for large employers and third-party payers for providing prevention services and cancer care. Such national agreements will ensure →

access to the latest in cancer treatment, as well as prevention and screening programs. Pricing would remain within the control of individual member institutions.

The 13 participants—including Fox Chase Cancer Center, Philadelphia—have made an initial commitment to invest \$135,000 a year for the next four years.

COUNTY NEWS

ACMS KICKS OFF PREVENTION PROGRAM

The Allegheny County Medical Society (ACMS) this year kicked off its "Power of Prevention" campaign to promote preventive health to patients and the community.

According to ACMS, "While preventive health is already encouraged by physicians on a one-on-one basis, the goal of this campaign is to raise awareness of preventive health to a new level through the unified power of organized medicine." A second motive, the county society says, is to enhance physicians' roles in today's health care environment. "Physicians must continue to be regarded as the central experts when it comes to health, particularly as issues like cost and coverage take on new significance for patients. Taking a leadership role in preventive health is one way to remind patients that their health is physicians' top priority."

Activities will address domestic violence, substance abuse, living wills/advance directives, and care for the indigent. Local television and radio media have offered support of the project.

For additional information about the project, call the ACMS Department of Communications at (412) 321-5030.

LEHIGH PHYSICIAN HEADING TRAUMA PREVENTION EFFORT

Tamar D. Earnest, MD, a trauma surgeon at Lehigh Valley Hospital, Allentown, is heading the development of a trauma prevention video that will show that "the best way to manage trauma is to prevent it," she says.

Dr. Earnest says her goal throughout her career has been to "help put a trauma surgeon out of business." The video will show how trauma is managed and how trauma prevention efforts have been effective

An estimated 10,000 people attended the inauguration of Tom Ridge as Pennsylvania's governor on January 17 at the Capitol in Harrisburg. Shown here taking the oath of office, Governor Ridge focused his 20-minute inaugural address on the importance of values and the need for governmental, environmental, and educational reform. Also pictured with the governor are Justice Ronald D.J. Castille, administering the oath, and First Lady Michele Ridge. On the health care front, Governor Ridge in February voiced his support of managed care organizations serving Pennsylvania's Medicaid population.

in Lehigh County, as well as worldwide.

"We are filming patients, their families, caregivers in all trauma-related fields, and specialists in trauma prevention," she says. Cameo appearances are scheduled by a number of state and national figures, including Jack Templeton, MD, pediatric surgeon at Children's Hospital, Philadelphia, and president of the Pennsylvania Division of the American Trauma Society; and C. Everett Koop, MD, pediatric surgeon, and national chairman of the Safe Kids Coalition.

For additional information about the video, or how you can help, write to the Trauma Prevention Video Fund, c/o Burn Prevention Foundation, 5000 Tilghman Street, Suite 110, Allentown, PA 18104.

DR. DINOLUS INSTALLED AS PRESIDENT IN LEBANON

The Lebanon County Medical Society in January installed Baltazar T. Dinolus, MD, as president.

Dr. Dinolus, a board-certified general surgeon, has been in private practice in Lebanon for 30 years. A graduate of the University of Santo Tomas, he received his surgical training at Burlington County Hospital, Mt. Holly, New Jersey, an affiliate of the University of Pennsylvania and St. Joseph Hospital, Reading. He is an active member of the staff of Good Samaritan Hospital, Lebanon, and past chair of its Department of Surgery.

Other officers elected are: Denyse M. Allen, MD, president elect and program chair; John J. Messmer, MD, secretary; and Joseph M. Clark, MD, treasurer.

BERKS COUNTY INSTALLS 116th PRESIDENT

The Berks County Medical Society in January installed John C. Moser, MD, as its 116th president.

Dr. Moser, of Elverson, is board certified in family practice and geriatrics. He practices family medicine at Twin Valley Medical Center, Morgantown. A graduate of Hahnemann Medical College, he is a member of the medical staff at the Reading Hospital and Medical Center.

A member of organized medicine since 1980, Dr. Moser is a fellow of the American Academy of Family Practice and a diplomat of the American Board of Family Practice. He also is the team physician for Twin Valley School District.

At the same time, Daniel B. Kimball Jr., MD, an internist and director of the Department of Medicine at Reading Hospital and Medical Center, was installed as president elect.

ALLIANCE NEWS

1995 STATE AND NATIONAL ACTIVITIES PLANNED

The Pennsylvania Medical Society Alliance (PMSA) and the AMA Alliance (AMAA) will tackle several public health issues through 1995

activities. National and state alliances will participate in a new event this year to celebrate their many efforts to meet the health needs of their communities. Planned for this month, Medical Alliance Month "will provide a unifying activity through which all medical alliances...can bring awareness to the many things they do to help people."

Barbara Tippins, AMAA president, further explains that Medical Alliance Month is a way to link all medical alliances across the nation, as well as a means of telling the alliance story to the public to let others know about the health and service programs that benefit so many.

Campaign against violence

PMSA has also joined with the AMA in its Campaign Against Family Violence.

National statistics show that nearly one-quarter of women in the nation—more than 12 million—will be abused by a current or former partner sometime during their lives, and battered women may account for 22 to 35 percent of all women seeking care in emergency rooms. According to FBI statistics, 30 percent of women who were murdered in 1990 were killed by husbands or boyfriends.

PMSA has asked county alliances to schedule joint meetings with their county medical societies to increase awareness of such statistics, as well as other aspects of domestic violence, including identifying victims, and providing aid and treatment.

A 30-minute video, "Domestic Violence—A Talk by Sarah Buel," is available as part of the program. Buel, an attorney and a victim, offers a number of tips to help identify and assist victims; Dr. Richard F. Jones III, former president of the American College of Obstetricians and Gynecologists, also participates.

The tape is available free of charge from Wyeth Ayerst. For more information about the tape, or to preview or order it, call PMSA at (800) 228-7823 or (717) 558-7750.

In related news, Domestic Violence Day will be recognized on October 11.

Other efforts

In other efforts, PMSA is celebrating Doctors' Day—March 30—with a postal plate to stamp all mail leaving Society headquarters between March 15 and March 30. This effort began in 1991.

Also, PMSA's Emergency Assistance Fund in January donated \$1,000 to the California Medical Association Alliance to aid victims of the January floods. The check was presented to the alliance's president elect at the AMAA Confluence, held at the end of January.

For more information about national activities, call the AMA at (312) 464-4470. Direct questions about state efforts to PMSA at (800) 228-7823 or (717) 558-7750.

REPORTS AND DEADLINES

BYLAWS, REPORT AVAILABLE; AMA DEADLINE APPROACHES

The State Society in January published its 1994-95 bylaws, which have been mailed to county medical societies, specialty societies, and select leadership groups. For a copy of the bylaws, call your county medical society or the State Society at (800) 228-7823 or (717) 558-7750, ext. 406.

Also, in accordance with Resolution 92-27 of the House of Delegates, the quarterly report on actions of the House is now available from the Society. The report is provided to members to enable them to respond to and participate in upcoming House activities. To request a copy, call (800) 228-7823, extension 403.

AMA resolution deadline

The Resolution Committee of the Pennsylvania Delegation to the AMA has set March 31 as the deadline for receiving resolutions to be considered for submission to the AMA House of

Delegates at its annual meeting in June 1995. Resolutions received after this date will be considered for the December 1995 interim meeting.

Send resolutions to Arnold Cushner, Pennsylvania Medical Society, P.O. Box 8820, Harrisburg, PA 17105-8820, or fax to (717) 558-7840.

KIOSK NETWORK OFFERS HEALTH CARE, JOB INFO

The Commonwealth of Pennsylvania in mid-December unveiled Info/Pennsylvania, a network of multimedia, touch-screen kiosks that provide citizens with information on jobs and children's health care.

Unveiled under Governor Casey, the statewide network initially will provide information about eligibility and enrollment in such free and low-cost health programs as the Children's Health Insurance Program and the Society-supported Maternal and Child Health Outreach Campaign, offering health care and nutrition programs for pregnant women, mothers, and their families.

Information on services for the disabled, youth employment rights, youth and community services, and PennDOT license and registration is also available through the network, along with three video public service announcements on the dangers of tobacco, alcohol, and drug use. Education, tourism, and senior citizen services will be added later this year.

Pilot kiosks are located in: Super Fresh Food Market, North Philadelphia; Century III Mall, suburban Pittsburgh; Viewmont Mall and The Mall at Steamtown, Scranton; Colonial Commons/Giant Food, Harrisburg; Mill Creek Mall, Erie; Galleria Mall, Johnstown; Camp Hill Shopping Mall, Camp Hill; Oxford Valley Mall, Langhorne; and Fairgrounds Mall, Reading.

Info/Pennsylvania is funded by federal grants to the commonwealth.

ORTHOPODS TO DISCUSS SPORTS MEDICINE

The Pennsylvania Orthopaedic Society will hold its 1995 Spring Scientific Meeting, April 5-8, 1995, at the Williamsburg Inn and Lodge, Williamsburg, Virginia.

The meeting—approved for 12.5 CME Category 1 credit hours—will focus on sports medicine, with discussions on: Knee—Articular →

Lobbying Percentage Set at 16 Percent for 1994

For federal income tax purposes, the actual non-deductible percentage of your 1994 Society dues is 16 percent. Because of changes in the tax law, membership associations are required to report the percentage of their overall efforts related to lobbying. Members of these organizations are required to take this percentage into account when identifying dues as tax deductions. Direct questions to (800) 228-7823, ext. 234. Note: The AMA reports that 23 percent of its dues is not deductible.

TABLE 1: Number of cases in which a physician is joined as an additional defendant by a hospital or physician

Since beginning tracking joinder data on April 7, 1987, 131 PMSLIC insureds were joined by other parties through December 31, 1994, as follows:

PMSLIC Insured Joined By:	Number of Times:
Hospital	63
Other Physician	28
Nursing Home	4
Commercial Business	8
Plaintiff	4
Pharmacy/Pharmacist	10
Manufacturer	2
Drug Company	4
Other	8
TOTAL	131

During the same period, PMSLIC joined 21 other parties, as follows:

Party Joined By PMSLIC:	Number of Times:
Hospital	2
Physician	11
Drug Company	1
Manufacturer	4
Other	3
TOTAL	21

Cartilage, Meniscus; Knee Ligament; Knee, Spine, Foot, and Ankle; Patellofemoral Disorders/General Sports Medicine; Spine and Upper Extremity; and Cervical Spine—Upper Extremity. A health care update is also planned.

Meeting sessions are offered each morning, with family activities scheduled in the afternoons and evenings. For registration information, call (800) 228-7823 or (717) 558-7750, extension 447.

PMSLIC ISSUES SEMI-ANNUAL CLAIMS STATISTICS REPORT

The Pennsylvania Medical Society House of Delegates Resolution 86-17 requires that the Pennsylvania Medical Society Liability Insurance Company (PMSLIC) report certain claims statistics to the House of Delegates on a semi-annual basis.

In response to this resolution, PMSLIC published the first semi-annual report in the September 1987 issue of PENNSYLVANIA MEDICINE. The data included in the following tables is an update of PMSLIC's claims experience as requested by the resolution.

TABLE 2: Number of claims and suits filed by specialty from January 1, 1978-December 31, 1994

Specialty	Total Claims and Suits	Specialty	Total Claims and Suits
Allergy	25	Pathology	57
Anesthesiology	492	Pediatrics	438
Cardiac Surgery	31	Plastic Surgery	433
Cardia-Thoracic Surgery	67	Preventive Medicine	1
Cardio-Vascular Surgery	146	Proctology	11
Cardio-Vascular & Thoracic Surgery	149	Psychiatry	82
Cardiology	368	Pulmonary Diseases	5
Colon-Rectal Surgery	3	Radiation Oncology	1
Dermatology	142	Radiology	670
Emergency Medicine	378	Rehabilitation/Physiatry	124
Endocrinology	1	Rheumatology	13
Family Practice	797	Thoracic Surgery	74
Gastroenterology	47	Urology	272
General Practice	785	Vascular Surgery	37
General Surgery	1,691	Vascular/Thoracic Surgery	8
Geriatrics	2	Physicians NOC	102
Gynecology	72	Other Practitioners	
Hematology	2	Clinical Psychologist	1
Hematology/Oncology	12	Nurse Anesthetist	19
Industrial Medicine	17	Nurse Midwife	4
Infectious Diseases	7	Nurse Practitioner	2
Internal Medicine	1,881	Physician's Assistant	6
Nephralogy	10	Physiotherapist	2
Neurology	170	Registered Nurse	7
Neurosurgery	428	Surgical Technician	4
Nuclear Medicine	3	X-Ray Technician	2
OB/GYN	1,694	Other Practitioner	1
Oncology	17		
Ophthalmology	395	Corporate Liability	1,379
Orthopedics	23	Partnership Liability	64
Orthopedic Surgery	1,797		
Otolaryngology	301	GRAND TOTAL	15,772

Keep in mind that the specialty totals are affected in part by the number of PMSLIC insureds in each specialty. In addition, some specialties are relatively new PMSLIC rating classifications and were not in existence for the entire time period represented.

Note: To more accurately reflect PMSLIC's experience, the tables have been expanded to include all claims and suits indexed against PMSLIC insureds since the company's inception in 1978. The exhibits represent data for January 1, 1978, through December 31, 1994.

Table 1 (above left): Joinders—Includes PMSLIC physicians joined by other parties and other parties joined by PMSLIC.

Table 2 (above right): Number of claims and suits filed by specialty, January 1, 1978-December 31, 1994.

Table 3 (next page): Breakdown of PMSLIC claims and suits filed by specialty, January 1, 1978-December 31, 1994.

Individuals having questions or comments about this material should contact Jane L. Conley, director of medical research and statistics, PMSLIC, P.O. Box 8375, Harrisburg, PA 17105-8375, (717) 558-7500, extension 501.

NATIONAL LEADER TO SPEAK AT ANESTHESIA MEETING

Norig Ellison, MD, president elect of the American Society of Anesthesiologists, will present a special address to attendees of the Pennsylvania Society of Anesthesiologists' annual meeting, to be held April 21-23, 1995, at the Doubletree Hotel, Philadelphia.

The meeting program will focus on trauma patients, heart and lung transplantation, obstetric anesthesiology, operating room hazards, and elderly patients.

Application has been made to the Pennsylvania Medical Society for 14 CME credit hours. For registration information, call (800) 228-7823 or (717) 558-7750, extension 447.

CORRECTION: In *Leadership Profiles* of the February issue of PENNSYLVANIA MEDICINE (page 44), Sunbury was inadvertently placed in Union County. In reality, Sunbury is located in Northumberland County.

* Claims and suits filed during this period resulted from policy years 1978-1994. PMSLIC's limit of liability is \$100,000 per incident for policy years 1978-1982, \$150,000 for 1983, and \$200,000 for 1984-1994.

Keep in mind that the specialty totals are affected in part by the number of PMSLIC insureds in each specialty. In addition, some specialties are relatively new PMSLIC rating classifications and were not in existence for the entire time period represented.

This PUP Is Not a Dog

Donald E. Harrop, MD

Parts of the Health Care Quality Improvement Program (HCQIP) have been discussed in this column. This month, KePRO's president goes one step further, describing the development, implementation, and results of one HCQIP project.

I thought it might be interesting to look at a cooperative project step-by-step, from start to finish. The one I've chosen to describe here is the Platelet Utilization Project (affectionately referred to by KePRO staff as "PUP").

The idea for this project originated with a HCFA request that PROs look into projects concerning utilization of blood or blood components. A staff member had noted that it appeared as though platelets were being ordered by many physicians in standard amounts, instead of in accordance with the College of American Pathologists' guideline.

The guideline recommends transfusing one random donor platelet concentrate per 10 kilograms of the patient's body weight. The hypothesis is that excess platelets increase the risk of patients acquiring transfusion-associated diseases, in addition to causing significant waste of this sometimes scarce product.

We conducted analysis of hospital data to determine if the hypothesis appeared to be correct and to see if a pattern was evident. This information was considered by KePRO's Project Evaluation Committee, which decided the project had merit and met the criteria: It appeared to involve a sufficient number of problem cases, had the potential to improve care, and the hypotheses were supported by the medical literature and practice parameters.

A study group established the criteria for selecting providers for possible participation, KePRO's Steering Committee was asked to provide input, and 40 hospital chief operating officers were asked for information concerning Medicare patients who had received platelet transfusions during 1993. Six of the 40 providers representing peer groups were selected for collaboration and asked to provide a total of

287 medical records. Meanwhile, a Project Data Collection Instrument—the series of data elements to be abstracted from each medical record—was developed.

An instructional session was held for KePRO staff to assure that they understood the specifics of the abstraction process. Key elements to be collected were the patient's weight, the number of random donor platelets ordered, and the number of random donor platelets actually transfused.

Patients whose records showed they received only single-donor platelets prepared by apheresis were eliminated from the study. Data were collected for only the first pooled platelet transfusion the patient received. Validation of the abstracted data was conducted and found to be 90 percent reliable.

The results of the project supported the hypothesis: Platelets were not being administered to patients based on body weight, but rather according to patterns learned during medical or surgical residencies.

Data from the project, unique to each institution, were shared with the six providers, and they were invited to submit action plans. In general, the providers were receptive to the information; action plans intended to correct the situation in their facilities are presently being submitted. At this writing, the project is entering its second phase: to select other providers and repeat the project.

Although the PUP was designed as a means of quality improvement, it provided another important benefit: potential cost savings. The six hospitals, in 206 cases used in the study, averaged overutilization of 2.8 units per patient—an average of \$140 per case could have been saved by the hospitals, not HCFA, if the guideline had been followed. As the guideline becomes recognized as the standard, the quality improvement and cost savings for providers will apply to their non-Medicare patients as well.

This points out the tremendous potential for the HCQIP to improve the delivery of health care as we progress to even more meaningful projects. ◊

Dr. Harrop is president of the Keystone Peer Review Organization.

Our annual reunion demonstrates what makes The James so special - our dedication to caring for your patients. You see, The Arthur G. James Cancer Hospital and Research Institute has a focused mission. To help people who have cancer and their families. So if you ever need to refer a cancer patient, you can be sure our primary interest is their good care.

that can provide your cancer patients with the very best care available, the most advanced treatments and a profound level of compassion. We can also provide you with any treatment and referral information you need via the OSU ConsultLine, 1-800-824-8236.

WHAT'S SO SPECIAL ABOUT A CANCER HOSPITAL THAT ORGANIZES A PATIENT REUNION EVERY YEAR?

This service can give you access to our cancer physicians from 8 a.m. to 6 p.m.

The James is a research and treatment facility dedicated solely to fighting cancer. And everything about The James is geared toward that goal.

We are one of only 27 Comprehensive Cancer Centers in the country, as designated by the

National Cancer Institute. We are the only freestanding cancer hospital in the midwest. And assembled at The James is a group of the world's finest researchers and cancer physicians who continually broaden our knowledge and raise the standards of cancer care.

That is what makes The James a premier cancer facility. A place

weekdays, and 24 hours a day, seven days a week, if an emergency should come up.

There are many reasons The James is so special. Here are just a few. But every year at our reunion, there are about 1,200 more.

The Arthur G. James Cancer Hospital and Research Institute, Columbus, Ohio

THE JAMES

THE NEXT GENERATION OF HOPE

Herman Beerman, MD, Philadelphia

University of Pennsylvania School of Medicine, 1927; age 93, died January 1, 1995. Dr. Beerman was a dermatologist. •

Hugh G. Boyle, MD, Forty Fort

Temple University School of Medicine, 1933; age 88, died December 31, 1994. Dr. Boyle was a radiologist. •

Louis H. Castor, MD, Philadelphia

Hahnemann University School of Medicine, 1953; age 67, died January 8, 1995. Dr. Castor was an internist. •

Donald A. Dupler, MD, Bryn Mawr

Age 80, died December 26, 1994. Dr. Dupler specialized in cardiovascular disease. •

Louis K. Elfman, MD, Hollywood, FL

University of Pennsylvania School of Medicine, 1923; age 94, died December 15, 1994. Dr. Elfman was an otolaryngologist. •

Dorothy J. Fischer, MD, Wilkes Barre

Medical College of Pennsylvania, 1939; age 84, died December 25, 1994. Dr. Fischer was a general practitioner. •

Abraham Ginsburg, MD, Huntingdon Valley

Temple University School of Medicine, 1943; age 76, died December 2, 1994. Dr. Ginsburg was a family practitioner. •

Margaret E. Hallock, MD, Lewisburg

New York Medical College, 1952; age 73, died November 28, 1994. Dr. Hallock was a family practitioner. •

John E. Hartle, MD, Everett

University of Pittsburgh School of Medicine, 1953; age 71, died November 22, 1994. Dr. Hartle was a family practitioner. •

Harry B. Hayman, MD, New Hope

Jefferson Medical College of Thomas Jefferson University, 1945; age 76, died November 21, 1994. Dr. Hayman was an obstetrician/gynecologist. •

Mark P. Holland, MD, Mahanoy City

Temple University School of Medicine, 1934; age 86, died November 23, 1994. Dr. Holland was a pediatrician. •

Carl H. Hoover, MD, La Jolla, CA

Harvard Medical School, 1930; age 94, died December 30, 1994. Dr. Hoover was a pediatrician. •

D. Kenneth Leiby, MD, Doylestown

University of Pennsylvania School of Medicine, 1931; age 91, died December 31, 1994. Dr. Leiby was a general practitioner. •

Harmon J. Machanic, MD, Port St. Lucie, FL

University of Vermont College of Medicine, 1946; age 71, died December 27, 1994. Dr. Machanic specialized in diagnostic radiology. •

Thomas C. McAuliffe, MD, Ambler

University of Pennsylvania School of Medicine, 1935; age 85, died December 8, 1994. Dr. McAuliffe was a general surgeon. •

Robert L. McCoy, MD, Bethlehem

Hahnemann University School of Medicine, 1967; age 54, died January 1, 1994. Dr. McCoy was a neurologist. •

Myer Mendelson, MD, Philadelphia

Age 74, died December 25, 1994. Dr. Mendelson was a psychiatrist. •

Ali Mohamed Musa, MD, Schnecksville

B.J. Medical College, Gujarat University, Gujarat, India, 1978; age 40, died July 7, 1994. Dr. Musa was an internist. •

Robert W. Preucel, MD, Gladwyne

University of Pennsylvania School of Medicine, 1950; age 74, died January 8, 1995. Dr. Preucel was an obstetrician/gynecologist. •

Alvin M. Soffe, MD, Bryn Mawr

Hahnemann University School of Medicine, 1946; age 73, died January 13, 1995. Dr. Soffe was a cardiologist. •

Emanuel G. Tulsy, MD, Philadelphia

Jefferson Medical College of Thomas Jefferson University, 1948; age 70, died November 28, 1994. Dr. Tulsy was an oncologist. •

Lee Weinstein, MD, Lancaster

State University of New York at Buffalo School of Medicine and Biomedical Sciences, 1929; age 94, died January 11, 1995. Dr. Weinstein was an ophthalmologist. •

Albert E. White, MD, Yardley

Hahnemann University School of Medicine, 1943; age 76, died January 9, 1995. Dr. White was a family practitioner. •

Frederick Bachman, MD, Berwick

George Washington University School of Medicine and Health Sciences, 1947; age 72, died January 4, 1995. Dr. Bachman was a general practitioner. •

John T. Kea, MD, Philadelphia

Hahnemann University School of Medicine, 1978; age 48, died December 19, 1994. Dr. Kea was a family practitioner. •

Manuel Montes, MD, Palmerton

University of the East, Manila, 1961; age 59, died December 3, 1994. Dr. Montes was a general practitioner. •

C. Christopher Morris II, MD, Philadelphia

Tufts University School of Medicine, 1941; age 80, died December 28, 1995. Dr. Morris was a psychiatrist. •

Jacob Specter, MD, Penn Valley

University of Pennsylvania School of Medicine, 1943; age 75, died December 11, 1994. Dr. Specter was a general surgeon. •

Patrick L. Tighe, MD, Clark's Green

Hahnemann University, 1938. Dr. Tighe was an anesthesiologist. •

• Denotes membership in the Pennsylvania Medical Society at the time of death.

Now is the time to plan for Later

Step back from your practice for a moment and be certain that you will have adequate financial resources for the enjoyable activities you've postponed.

If philanthropy is important to you, let the Trust show you how to combine charity, additional retirement income, and tax savings. Send the coupon below to Bob Lamb, Planned Giving Officer, The Educational and Scientific Trust of the Pennsylvania Medical Society or call (800) 228-7823.

Ten Skills You Need to Manage a Modern Medical Practice

In today's competitive medical market, the practice that is well managed has a better chance of success. In a busy group practice, it is best for the physician manager to oversee operations, leaving the nuts and bolts of daily administration to an efficient lay manager. In a smaller or solo practice, finances may dictate that you serve as the physician manager.

In either event, you—or you and your practice colleagues—may need advice and assistance with management issues. The State Society can offer support, and it may also be wise to consult with a professional medical-practice adviser. Informally, you should develop a number of management assets, including these top 10:

1) *Assessment*: You need strong assessment skills to evaluate and articulate practice goals and expectations. Schedule time to meet with your colleagues and compare assessments.

2) *Planning*: To establish measurable practice goals and focus on long-range achievements will take discipline, creativity, thoroughness, foresight, and flexibility, as well as access to research capability and resources.

3) *Initiative*: Waiting to be told what to do can cost your practice. Anticipate needs and potential problems, and address them proactively.

4) *Communication*: Clear, consistent communication is vital. Keep the other physicians in the group advised of the practice's goals, expectations, achievements; the hurdles that need to be cleared; and the responsibilities that must be met. Remember: At least 50 percent of good communication is listening. Meet regularly and frequently with your peers.

5) *Internal Relationships*: Get the most from your lay staff by making sure your people are skilled and trained. Get the most from your

physician colleagues by making sure things work the way they should, including the scheduling, reporting, and records systems. Make sure the human components of the system interact smoothly. Make any necessary adjustments, and use incentives wisely.

6) *Delegation*: Your time is valuable. Learn to assign each task to the person at the lowest level at which the job can be done well. Don't micro-manage; instead, encourage the lay staff to become experts at what they do.

7) *Systems Coordination*: A modern medical practice is a complex organization. Make sure the components mesh well. If you are continually "too busy," adjustments need to be made. Find out where the problem is and fix it.

8) *Finance*: Don't get involved with filing reports, entering data, tracking down accounts receivable. Have good systems in place and capable people running them. Use your time to analyze their summaries and reports, interpret data sets, and plan for financial growth.

9) *Marketing*: Promote your practice to your patients, the community, and any potential sources of business. Develop educational materials, press releases, and newsletters; make speeches; join civic groups; analyze patient flow. Survey your patients and, as applicable, referring physicians. Listen to their input, make necessary changes, and report those changes.

10) *Learning*: Know everything about your practice, competition, patients, and referrers. Know what legislation has been passed and is pending; know its impact on your practice. Know which payers are entering your area and the nature of the contracts being offered, including capitation. Know what other area physicians are doing, and why. Know what your local, regional, specialty, and national medical organizations are doing; what they support and

The Health Care Group

oppose; and whether you agree. Be active in these groups. Read anything that crosses your desk, attend seminars, talk to people, including government officials at all levels. Keep your colleagues and staff advised, and get their input.

All or some of the group's physicians may serve as manager on a rotating basis, usually for a term of three or four years; or you may be the only candidate for the job. You may like being a physician-manager. You may be able to streamline operations to reduce practice costs or discover contracts that lead to greater financial gains. You also may work longer hours and have less time to devote to patient care, which may mean reduced income. Beware burnout.

You have the right to be compensated for managing. Often, a group's physicians are glad to pay perhaps \$10,000 or \$20,000 annually to be relieved of management duties. You may prefer extra time off to cash. Understand that the other doctors may say you are not generating enough income and should be "doctoring" instead of managing.

Of course, you have the right to refuse to continue managing if you are denied compensation, or if you agree that you should be spending more time with patients. In that case, the group will be forced to adjust, either by appointing a different physician to take your place or by hiring more lay management help.

The group must decide which arrangement it wants, and occasionally review its goals and the steps being made to achieve them. It may be wise to form a steering committee to keep the group focused on its goals and the group's progress toward achieving them.

Why Do 60,000 Doctors Trust Us With Their Professional Reputations?

In an era of "not if, but when" a doctor will be accused of malpractice, your choice of professional liability coverage is extremely important. We know that *any* allegation can be devastating to both your professional reputation and your personal assets... making the company you choose critical to your future well-being. Many factors should be taken into account when making a decision.

Consider our financial strength and stability. We are rated A+ (Superior) by A.M. Best and AA (Excellent) by Standard & Poor's. No other company with an exclusive focus on the needs of the health care community has higher financial ratings.

Look at our experience. For nearly a century we have specialized in defending and protecting doctors. No other company has **successfully defended** more than 180,000 malpractice claims.

Local service is important, too. Our General Agents and Field Claim Managers work with you on every allegation. They average more than 15 years experience working with doctors and the legal system.

Why do more than 60,000 doctors trust their professional reputation and personal assets with us? No other company combines nearly a century of experience with financial strength and the local service provided by The Medical Protective Company.

Attention: Physicians

Have your
patients'
medicines
had a
check-up?

Many of your patients take several different medicines every day. Separately each one works well. But if they take two or more different medicines in combination without checking with you to be sure they work safely together, they can sometimes be harmful...even dangerous.

The next time you prescribe a medicine, ask your patients:

**"What other
prescription
and nonpre-
scription
medicines are
you taking?"**

Write for free information
on patient medicine
counseling.

Accredited Catagory 1 CME

Risa J. Lavisso-Mourney, MD, MBA, associate executive vice president for health policy, University of Pennsylvania Medical Center, Philadelphia, has been named to the national advisory council of the Agency for Health Care Policy and Research, Public Health Service, U.S. Department of Health and Human Services.

Dr. Rovner

Barry W. Rovner, MD, director of geriatric psychiatry, Wills Eye Hospital, Philadelphia, was appointed a member of the Human Development and Aging Study Section, Division

of Research Grants, Department of Health and Human Services, National Institutes of Health.

Paul C. Brucker, MD, president, Thomas Jefferson University, Philadelphia, was elected to the Institute of Medicine.

Domingo T. Alvear, MD, was appointed president of Polyclinic Medical Center, Harrisburg.

Benjamin Calesnick, MD, internist, St. Joseph's Hospital, Philadelphia, was reappointed to the Pennsylvania Drug, Device, and Cosmetic Board by former Governor Robert P. Casey.

The Spina Bifida Association of Western Pennsylvania has named **Thomas B. Benz, MD**, a Pittsburgh urologist, to its board of directors.

John R. Glassburn, MD, chief of radiation oncology, Pennsylvania Hospital, Philadelphia, received the Cancer Control Award from the American Cancer Society. Also at the hospital, **Carolyn E. Parry, MD**, deputy chairman of radiology, was awarded a fellowship to the American College of Radiology.

Reginald P. Pugh, MD, director of medical oncology, Allegheny General Hospital, Pittsburgh, was honored by the Cancer Support Network with the Paul C. Gaffney, MD, Humanitarian Award.

Albert J. Finestone, MD, professor of medicine and director, The Institute on Aging, Temple University

School of Medicine, Philadelphia, was awarded the 1994 Clinician of the Year Award by the Delaware Valley Geriatric Society, an affiliate of the American Geriatric Society.

The Arthritis Foundation, Eastern Pennsylvania Chapter, awarded **Donald Friedman, MD**, director of rheumatology, Crozer-Chester Medical Center, Upland, the National Volunteer Service Citation and the Award of Appreciation for Outstanding Leadership.

Stephen D. Silberstein, MD, director, Comprehensive Headache Center, The Germantown Hospital and Medical Center, Philadelphia, spoke at the Tenth Migraine Trust International Symposium: Recent Advances in Migraine Research and Therapy, in Kensington, London, England.

Dr. Simeone

Jefferson Medical College of Thomas Jefferson University, Philadelphia, has appointed the following: **Frederick A. Simeone, MD**, chairman of neurosurgery; **H. Warren**

Goldman, MD, PhD, professor and vice chairman of neurosurgery; **Robert H. Rosenwasser, MD**, professor of neurosurgery; **William A. Buchheit, MD**, professor of neurosurgery; and **David W. Andrews, MD**, associate professor of neurosurgery.

John C. Sonne, MD, a Philadelphia County psychoanalyst, was honored for his special efforts as a member of the volunteer faculty of Robert Wood Johnson School of Medicine, Piscataway, New Jersey.

Raj K. Narayan, MD, was appointed professor and chairman of neurosurgery, Temple University Health Sciences Center, Philadelphia.

The North Philadelphia Health System appointed **Eric I. Mitchell, MD**, as senior vice president for medical affairs.

Arthur S. Patchefsky, MD, former professor and vice chairman of pathology, Hahnemann University

Hospital, Philadelphia, joined Fox Chase Cancer Center, Philadelphia, as chairman of pathology. Also newly appointed at Fox Chase are: **Harry S. Cooper, MD**, chief of surgical pathology; **Hormoz Ehya, MD**, chief of cytopathology; and **Nancy Anne Young, MD**, director of clinical pathology.

Stephen E. Cyran, MD, associate professor of pediatrics, Penn State's Milton S. Hershey Medical Center, Hershey, has been appointed chief of pediatric cardiology.

Ajit K. Sachdeva, MD, chief of surgical education, Medical College of Pennsylvania and Hahnemann University, was named president-elect of the American Association for Cancer Education. Also from MCP/Hahnemann, **John S.**

Bomalaski, MD, associate professor of medicine, Rheumatology Division, was named chairperson of the Immunology Merit Review Board for the Department of Veterans Affairs; and **Rolando H. Rolandelli, MD**, associate professor of surgery, was named director of surgical nutrition, Hahnemann University Hospital.

Sherin Devaskar, MD, was named chief of pediatrics and director of neonatology, Magee-Womens Hospital, Pittsburgh, with a joint appointment as professor of pediatrics and obstetrics, gynecology, and reproductive sciences, University of Pittsburgh School of Medicine.

Dr. Roslyn

Joel J. Roslyn, MD, chairman and Morani professor of surgery, Medical College of Pennsylvania, Philadelphia, was elected president of the Society of University Surgeons.

S. Fred Brunk, MD, DuBois, received a three-year appointment as cancer liaison physician, Hospital Cancer Program, DuBois Regional Medical Center.

Mark S. Adkins, MD, was named chairman of cardiothoracic surgery, Albert Einstein Medical Center, Philadelphia.

Geisinger

As an organization accredited by the Pennsylvania Medical Society for its continuing medical education program, Geisinger designates these activities as meeting the criteria for Category I credit for the American Medical Association's Physician's Recognition Award

and the Pennsylvania Medical Society membership requirement. Please refer to each individual program flyer for registration fees, starting times, and number of credit hours. For further information or for copies of individual programs, call Sharon Hanley, RMP, at 1-800-272-6692. There is a 24-hour answering service available. You may also write to her at 100 North Academy Avenue, Danville, PA 17822-1350.

PHYSICIANS WANTED

Western Pennsylvania—Board Certified or prepared emergency physicians needed for staffing a community hospital emergency department near the Ohio/Pennsylvania border. Please send CV to P.O. Box 91666, Cleveland, OH 44101.

Pennsylvania—Physician group seeks full-time and part-time physicians for an emergency department of community hospitals in central and western Pennsylvania. Please send resume to P.O. Box 91666, Cleveland, OH 44101.

Pittsburgh, Pennsylvania—Penn Group Medical Association (PGMA), a 100-physician multi-specialty group practice affiliated with the largest HMO in Pittsburgh, is seeking BE/BC physicians in: family practice, internal medicine, pediatrics, ob/gyn, and psychiatry. We are formally affiliated with major teaching hospitals and leading community hospitals in Pittsburgh. PGMA serves eight ambulatory care centers, all conveniently located near cultural, educational, recreational, and corporate activities. Excellent salary, and fringe benefits. For confidential consideration contact: Angela Lascola, HealthAmerica, 5 Gateway Center, Pittsburgh, PA 15222, or call collect (412) 553-7502.

Emergency Physicians—Emergency Physician Associates is seeking quality ED physicians for a variety of practice opportunities. Director and staff positions are available. EPA contracts with hospitals in NJ, PA, MD, and NC for the provision of emergency medicine, urgent care and industrial/occupational health services. Our client hospitals are located in rural to urban areas with patient volumes ranging from 10,000 to 75,000. At EPA we offer physicians competitive compensation, flexible schedules and shifts, occurrence-based malpractice insurance, a variety of practice settings to choose from, cooperative working environments, and supportive medical directors and corporate staff. Interested candidates may contact EPA at 1-800-848-EPA-1.

Part-time position available. Evening or weekends, modern urgent care center, N.E. Phila. suburb. Excellent opportunity for resi-

dent or practitioner seeking to supplement income. Contact Dr. Miller (215) 638-0666.

Guthrie Clinic needs PEDs for Fingerlakes region, NY and PA. These practice opportunities will fill quickly, and do not qualify as a J-1 Visa conversion area. For more information, call Sherron Satow, 800-776-5776, or fax CV: (314) 863-1327.

Family Practice Physician—Join existing two doctor practice in Jenkintown, PA. This is a people oriented practice. Must be BC/BE. Call (215) 884-7620.

Academic General Internist—The Medical College of Pennsylvania-affiliated Transitional Year Residency Program at Frankford Hospital is seeking a part-time faculty member in the Department of Medical Education. Responsibilities include conference scheduling/lecturing, program administration, daily attending rounds on our floor or ICU services, and supervision of emergency in-patient care. Subspecialty background desirable but not required. Highly competitive compensation and benefits (paid vacation, professional liability insurance, CME stipend), on-site wellness center, exclusive day care and more. Please contact: Gary Burmylo, Frankford Hospital, Frankford Avenue & Wakeling Street,

Philadelphia, PA 19124, (215) 831-2282. EOE M/F/D/V.

Practice Opportunities—Openings Nationally in all specializations. Excellent salary and benefit packages including partnership opportunities, 100% paid malpractice, moving and relocation expenses, license assistance, up to 6 weeks paid vacation. On site interview expenses paid. Toll-free 24 hours (800) 759-0104. Or send CV to La Salle Medical Group, 6599 East Thomas Road, Suite 2097, Scottsdale, AZ 85251.

General Surgeon, BC/BE to join large solo surgical practice. Salary \$140,000 with early partnership. Send CV to Box 402, PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

Immediate Opening for MRI Radiologist—Excellent opportunity to join a group of four radiologists in private practice. This Northeast practice uses state-of-the-art, low field MRI equipment and teleradiology. Board certification is required, licensure in PA, NJ, and NY helpful. Please call or send CV to Dr. James Domesek at 4630 Street Road, Trevose, PA 19035, (215) 396-8455.

Pittsburgh—Established family practice physician seeks BC/BE FP physician. PT-FT

Do you know someone who needs nursing care in their home?

We have a special person to take care of your special person.

Are your patients entitled and/or eligible for Medicare benefits? If you are not sure call **MEDICAL PERSONNEL POOL** and we will help you get the answer. Bear in mind that a person need not be a Social Security recipient or over 65 to receive Medicare services. People who are disabled for 2 years or more are eligible as are people who are in dialysis for 6 months or longer. **MEDICAL PERSONNEL POOL** provides a full range of **HOME HEALTH SERVICES**, as well as private duty nursing. We provide most of these services in the home as well as in the hospital and nursing home.

Transforming Medicare: Will the Train Derail?

Lonnie R. Bristow, MD

Editor's note: This is excerpted, with permission of the American Medical Association, from a nationally broadcast speech by Dr. Bristow given January 13 in San Francisco.

On January 1, 1995, the first baby boomer became eligible for a membership in AARP—the American Association of Retired Persons. At first it's going to be just a trickle, then it'll become a torrent, and before we know it they'll all be racing toward 65. And when they get there, the first thing they're going to ask is: "Where is my Medicare card?" But at the rate we're going, they might not be able to get one—unless Medicare is changed—changed dramatically and changed definitively.

It will take nothing less than a transformation to turn Medicare around, [and] the AMA plans to be a leader in that transformation [with] a treatment plan built upon a set of six principles.

First, give the people who use Medicare a financial stake in their own health care decisions. There is an enormous disconnect between the program and the people. There is no sense of individual responsibility. And Medigap doesn't help, either. This inexpensive insurance program insulates patients from deductibles and copayments, so the care actually seems to be free—which it is not. If people could see and feel a direct connection between ordinary services they demand and what those services cost, I have to believe the excess demand would diminish.

Medical savings accounts can help because they give cost-conscious patients greater control over the financing of their own health care. And perhaps someday, we might even consider a system where government literally gives people vouchers for the amount Medicare owes them, so they can make their own health care choices.

Second, make the financing of Medicare more equitable. Right now, young people at the bottom of the income ladder are footing the bill for older people who have reached the very top. Young people with modest incomes should not be subsidizing older people who have substantial assets. That's not just bad public policy; it's bad fiscal policy, and it's certainly bad human policy. We must restore balance and fairness to paying for Medicare.

Third, open up Medicare to price competition. If we relax Medicare's nonsensical price controls, we'll discover there are ways out there to do it better and cheaper.

Fourth, tear down the regulatory maze that makes Medicare a bureaucratic nightmare that's ripe for games and rip-offs. Most people just assume that Medicare is a national program run by a national bureaucracy. Well, it's not. Medicare is run by dozens of private contractors, each with its own set of rules and standards. [We must] simplify the system and end inequities.

Fifth, we are calling on America's physicians to join in a major campaign to reduce the level of care that's just not necessary. It comes in many forms: care that is wasteful and unneeded, inappropriate care, and care that is part of defensive medicine, which will be an unfortunate and expensive fact of life until the professional liability laws are revised. We realize a big part of this problem is educational. And at the AMA we are uniquely positioned to help doctors, institutions, patients, and their families better understand the legal and ethical issues involved here.

Sixth, reduce fraud and abuse by the handful of unscrupulous practitioners inside and outside medicine who steal millions—if not billions—from Medicare each year. A tiny criminal minority robs our health system of precious resources by conspiring with other providers, by billing for services never rendered, by paying bribes and kickbacks for referrals. Physicians have an ethical obligation to report fraud, whether by their colleagues or by others.

If we're really going to make this [treatment plan] work, the physicians of America had best be at the table. You might remember that physicians were shut out of the process the last time around—and I think that's one of the reasons health system reform didn't get off the ground in the first place.

Reforming health care without talking to the doctors is like reforming the courts without talking to the judges—it just makes no sense. But that was then; this is now. ○

Dr. Bristow is president elect of the American Medical Association.

POWERFUL PARTNERSHIPS.

Stability, strength
and synergy
stand the test of time.

Almost twenty years ago,
such a foundation was laid
by medical professionals
to build protection through your own
medical liability insurance company.

With your support, we have grown
to become the insurance carrier
of choice for physicians and surgeons,
as well as their hospitals,
throughout New Jersey and Pennsylvania.

Today, change is everywhere, and stability,
strength and synergy have never been so valuable.

But they are not enough.
To succeed today, you need the added power
of new insurance products, financial services,
and consulting services.

MIIX has broadened its foundation and
introduced these membership enhancements
to help you meet the challenge of change.

Call us for more details: 1-800-234-MIIX.

We develop powerful partnerships.

31 Drug Education Efforts Focus on Minority Medicine

The Society's Center for Professional Drug Education and Information suggested the publication of articles on prescribing for minorities as part of the Center's focus this spring. "Building Your Cultural Competency" (page 32) explains why it's important to recognize the differing needs of diverse patient populations. "Pharmacologic Initiatives in Black Hypertensives" (page 34) takes a clinical look at why managing hypertension in blacks remains a special challenge.

“This is unbelievable.

Thirty minutes into our first meeting, it was obvious who was running the show, and he wasn't a doctor. He had

an agenda that wasn't anything close to mine. Sure, when they sold me the medical liability policy, they bragged about having physicians on their board. They told me to expect a fair review by my peers if there was ever a problem. Then came the malpractice suit. I'm really afraid I might lose this one, and not because of a bad medical decision. I wish now that I had protected my reputation and signed with PMSLIC. PMSLIC is doctor owned, doctor run. With PMSLIC, any claims brought against me would have been reviewed by physicians like me — physicians with a vested interest in the reputation of the

medical community — a reputation we all need to maintain, even safeguard. That would have made all the difference in the world to me. Because now, I'm really scared.”

AT LONG LAST, A MEDICAL LIABILITY VICTORY: The U.S. House of Representatives voted 247-171 in mid-March to pass a cap of \$250,000 on awards for non-economic damages in medical malpractice or "health care liability" cases. The action was the result of an amendment—introduced by Christopher Cox (R-CA) and Pete Geren (D-TX)—to a Republican package of broad legal reforms aimed at protecting business from frivolous lawsuits and excessive jury awards. Trying to broaden the scope of the debate to include medical liability reforms, the AMA worked with state and specialty medical societies to support the cap. The State Society was actively involved in the effort: In addition to a letter from Society President John H. Hobart, MD, to Pennsylvania's Congressional delegation, Society Capitol Contacts urged their representatives in Congress to support the amendment. At press time, the reforms were awaiting consideration by the U.S. Senate.

SOCIETY MEMBERS ARE URGED TO CALL SENATORS ARLEN SPECTER AND RICK SANTORUM TO SUPPORT SENATE PASSAGE.

BOARD VOTES TO SUPPORT GOALS OF PHYSICIAN-OWNED MANAGED CARE ORGANIZATION: The State Society's Board of Trustees in mid-March approved recommendations: 1) to fully support and endorse the goals of the Pennsylvania Physician Healthcare Plan, Inc. (PPHP), and 2) to continue discussions with PPHP leadership in evaluating how the Society and its subsidiaries can assist and coordinate efforts with PPHP. Look for an interview with PPHP founder Gary Brown, MD, next month in PENNSYLVANIA MEDICINE. Details of the business relationship forming between Infinity Management Services, Inc.—a subsidiary of the Pennsylvania Medical Society Liability Insurance Company (PMSLIC)—and PPHP will appear in a subsequent issue.

LEGISLATION SOUGHT TO CREATE CME LICENSURE REQUIREMENT: Also at its March meeting, the Society's board approved a recommendation of the Council on Education and Science that the Society seek and support legislation creating a licensure requirement for continuing medical education (CME). It was agreed such a requirement would increase credibility for medical liability reform and may reinforce the level of expertise of some physicians. The Society is in contact with legislators willing to introduce such a bill.

CAT FUND GETS SERIOUS ABOUT LATE SURCHARGE PAYMENTS: Physicians are reminded that required Catastrophe Loss Fund (CAT Fund) surcharge payments—made through each physician's primary carrier—are due within 60 days of the inception or renewal of coverage. Some physicians have paid their carriers late, or their carriers have remitted the monies late. In such cases, the CAT Fund is permitted to deny coverage and report the physician to the State Medical Board for possible licensure action. Though it has not taken such action yet, the CAT Fund has indicated it is serious about addressing the problem.

PHYSICIANS SHOULD REVIEW USE OF CALCIUM CHANNEL BLOCKERS: Research presented at a recent national conference on cardiovascular disease epidemiology and prevention indicated that patients taking calcium channel blockers may be at increased risk for heart attacks, compared to patients on other types of drugs. However, actual increased risk for an individual patient is still quite small, according to the Society's Center for Professional Drug Information and Education. National clinical trials should provide more definitive answers in the future. Patients now on calcium channel blockers are advised to continue their medication and consult their physicians about possible alternatives.

INSURANCE COMMISSIONER TAKES OFFICE: Linda S. Kaiser, former assistant general counsel, Reliance Insurance Company, Philadelphia, was sworn in on March 20 as state insurance commissioner. In remarks, Kaiser said she will reevaluate several insurance issues, including managed care and utilization review under Act 6. Society staff have met with the commissioner to discuss Society concerns.

Where Have Our Statesmen Gone?

John W. Mills, MD
Medical Editor

As I've perused the papers for the last two months, it has become increasingly clear that, despite much rhetoric, very little of substance has been accomplished by our elected members of the U.S. House of Representatives and the Senate. Newt Gingrich (R-GA) would no doubt readily disagree with me; but when you take stock, anyone would realize that *both* "houses" have to come up with a compromise before any legislation can reach the White House, for either signature into law or veto. The "new" House of Representatives has churned out much paper (wasting our natural forest resources) and many, many words (excess CO₂), but that's about the extent of it. Until our Senate debates and considers all this verbiage, we've spent a lot of time and money for naught.

Perhaps this is the way it is supposed to be, but I got to thinking about some of our great statesmen of the past and how they accomplished the creation of the strong underpinnings of our democracy, without telephones, computers, typewriters, fax machines, or printers. They made their way to Washington on horseback or by stagecoach, through weather at least as severe as we now have, without the convenience of Amtrak, jet liners, or limos. Central heating was not around; night work was done with the help of *real* candle power—and all of it was in longhand!

Our present Congress typifies the point: an excess of resources and reams of paper—with little substance. The results are pretty mundane—increased taxation almost yearly and much less benefit for the people.

I recently came across the following, attributed to Abraham Lincoln:

You cannot keep out of trouble by spending more than your income. You cannot help the poor by destroying the rich. You cannot establish security with borrowed money. You cannot bring about prosperity by discouraging thrift. You cannot lift the wage earner by pulling down the wage payer. You cannot strengthen the weak by weakening the strong. You cannot help small men

by tearing down big men. You cannot build character and courage by taking away man's initiative and independence. You cannot help men permanently by doing for them what they would and should be doing for themselves. You cannot further the brotherhood of man by inciting class hatred.

This is very sage advice for all of us, and especially for our politicians.

Another quote—a proclamation by Mr. Lincoln in 1863:

We have grown in numbers, wealth, and power as no other nation has ever grown. But we have forgotten God...Intoxicated with unbroken success, we have become too self-sufficient to feel the necessity of redeeming and preserving grace, too proud to pray to the God that made us!

Substitute "Supreme Being" for "God," and I believe this speaks to all people.

Lincoln was a statesman, politician, military strategist, parent, and a thinker—no hollow words or deeds here.

Thomas Jefferson also comes to mind whenever I think of great leaders of our country. He was a thinking politician who considered the welfare of all citizens, not just his constituents. Jefferson founded the University of Virginia, was an avid reader and writer, and had much to do with the establishment of the scientific method in American medicine. Visit Monticello, and you will realize what a truly remarkable statesman Jefferson was—as well as a real scientist seriously observant of all types of phenomena.

An article in the November 1994 issue of the American College of Surgeons' *Bulletin* pointed out Jefferson's reference to "informed consent" from patient to physician and the necessity of helping the patient benefit from a sense of well-being and hope.

I don't consider myself a dreamer, but I wish we had a few good statesmen, without the greed, dishonesty, self-interest, and egocentricity which seems so evident in present-day Washington. It may take successive clean-sweeping elections to ferret out a few good political statesmen who realize that the people *want* to return to their "roots." ◊

Agree? Disagree? We Welcome Your Response!

Dr. Mills invites *your* reactions to this and other articles in this issue of PENNSYLVANIA MEDICINE.

**WHEREVER WE SHOW UP,
RATES GO DOWN.**

Whenever we come into a state, good sense comes along, nonsense exits. Stability returns to the medical liability insurance market. In nine states 18,000 of our member-insured doctors have been enjoying the new cost climate. Protected by one of the largest medical professional liability monoline insurance companies in America. And defended by a firm of medically savvy litigators who close almost 80% of cases without payment. And, year in and out, win 90% of cases that go to trial.

For information, call 1-800-228-2335.

Malpractice Liability Reform: Twenty Years and Working

John H. Hobart, MD

There's a number that keeps coming up in the stories I've been reading about the medical liability amendment to a bill in U.S. House of Representatives that was originally intended only to protect product manufacturers. The number is 20. As in, 20 years.

The AMA noted that the medical liability amendment, dubbed the "Cox-Geren Amendment" for Representative Christopher Cox (R-CA) and Representative Pete Geren (D-TX), came as a result of a "tireless campaign" begun by organized medicine 20 years ago.

Twenty years is a long time to sustain any effort, let alone a tireless one, and I suspect that there may have been a moment or two in the preceding decades when some of us wondered if we'd ever get anywhere. I confess to a few moments of discouragement myself.

But as the saying goes, it's not how many times you fall down, it's how many times you get up again. Despite many disappointments at both the federal and state levels, I am gratified to be able to say that your organizations have not succumbed to discouragement. Our State Society continues to hold medical liability and tort reform as key objectives, year after year, and we make what inroads we can, where we can.

Let's consider the recent passage in the U.S. House, by a vote of 247 to 171, of a provision that would set a cap of \$250,000 for non-economic damages in health care liability cases. A similar cap is a major part of California's Medical Injury Compensation Recovery Act (MICRA), which for the last decade has been a major factor in holding down malpractice premiums in that state, while at the same time preserving an injured party's right to economic recovery.

As I mentioned earlier, the original U.S. House bill did not include any mention of medical liability when it was first introduced. But here is the value of an organization that can monitor the whole spectrum of proposed legislation and make connections that others might not make.

A report in the *Congressional Quarterly* pointed out that the general liability legislation "offers a shortcut to medical malpractice reforms [the nation's doctors] have long sought." The fact is, nobody offered us a shortcut. We had to pursue it ourselves.

To us, it seemed just, well, common sense, that medical liability should be addressed in the original bill, HR 10, initially called the Common Sense Legal Reform Act in the Republican Contract with America. It didn't seem common sense to others, until organized medicine pointed it out to them. You may take "pointed it out" as a euphemism for an intelligent, multi-faceted lobbying effort that proceeded on several fronts.

Your State Society joined the AMA and others in grassroots contacts with key legislators at all stages of the legislative process, as the legal reform measure moved through the House. We made our concerns known to Representative George Gekas, a Central Pennsylvania Republican on the House Judiciary Committee, which considered the bill in late February.

Then, when we learned that the House Rules Committee would be likely to limit floor amendments to the measure, our advocates in Washington also worked to craft a floor amendment that would be acceptable to the House leadership.

Physicians from across the United States wrote, called, and faxed their support of the medical liability provision to their representatives in Washington at several key junctures. The amendment was offered. The amendment was accepted. The amendment passed the House.

There is still a long way to go on medical liability reform, but I think our progress so far gives us some perspective on the value of an organizational effort that doesn't quit, even after 20 years. We're in this for the long haul. The physicians of today care about tomorrow's patients, and the physicians and patients of the future. We're working on their behalf, though we ourselves may not reap the benefits of our work. ◊

CAN WE AFFORD TO FIX EVERYTHING THAT'S NEEDED?

Mrs. Smith and her two children do not have health insurance. She is one of about 35 million Americans that have "fallen through the cracks" on this issue. Mrs. Smith works as a waitress and earns \$18,000 per year. Her husband is out of the picture. Mrs. Smith's six-year-old daughter is a kindergarten student, and her two-year-old son attends day care. She gets no child support. Fortunately, the children are healthy.

Health insurance for Mrs. Smith and her children would cost about \$120 per month. She doesn't have it. Her budget is tighter than a drum. She spends hours working on ways to make ends meet. Her employer doesn't provide health insurance as a benefit. Mrs. Smith was on welfare before getting her present job. She and her children were covered by health insurance then. When she acquired her job, she lost the insurance provided by the state.

Most of the efforts to reform the health care system are directed toward helping people like Mrs. Smith...

For Mrs. Smith and her children to have health insurance, someone other than Mrs. Smith must pay for it or help her to pay for it. But before you agree to that, let's look at Mrs. Smith's situation once more.

Mrs. Smith is a 23-year-old product of a white, middle-class, suburban family. She never liked school and did only enough work to pass each grade. She loved to be with her friends and would stay out late on most nights. She did drink beer, but didn't do drugs.

Casual sex began at age 16, sometimes unprotected. At age 17 she was pregnant. She took time off from school to have the baby. Mr. Smith, 19, married her before the child was born, and they lived with her parents. After the baby was born, she completed high school. He didn't. Her parents took care of the baby most of the time.

Mr. and Mrs. Smith worked at various jobs over the next several years. She found she was pregnant again at age 20. Shortly after their son was born, Mr. Smith had had it with this situation and left, whereabouts unknown. At that time, Mrs. Smith went on welfare for two years. She then decided to take her present job as a waitress.

The story of Mrs. Smith is fairly common and in many respects relatively benign...Unfortunately, not having health insurance may be just one of the many serious psychosocial problems that need to be addressed [in this case].

Not having health insurance is too often a symptom of a deeper and broader series of several life decisions with negative results. Will society have the resources to confront the numerous other problems of people without health insurance?

Joseph A.C. Girone, MD
Philadelphia

CURRENT CONCEPTS IS TEACHING TOOL TO EMULATE

Congratulations on the exceptionally fine publication—*Current Concepts in Ophthalmology*, Vol. 3, 1995—featuring ocular emergencies. I think it is an issue that should be in every doctor's medical library for reference. Because I am a retired physician, I am donating my copy to the Centre Community Hospital Library. If I were still in active practice, I would not part with it.

The color plates with the black/white reproduction pointing out the abnormalities is a teaching tool that all texts would do well to emulate. Many is the time I have

looked at photos and not known where to find the captioned pathology.

Thank you for a job superbly done!
Ling G. Wong, MD
State College

Editor's note: This letter has been forwarded to the Pennsylvania Academy of Ophthalmology, the publisher and editor of Current Concepts in Ophthalmology.

The editors of PENNSYLVANIA MEDICINE encourage comments about the magazine and its contents, as well as viewpoints on current medical issues. Letters should be typed or legibly handwritten, concise, and should not exceed 200 words.

FOR YOUR PATIENT BULLETIN BOARD

We Can Reform Health Care

"If the goal of health care reform is to make this a *healthier* country—and not just divide up a trillion-dollar kitty—then the steps you take to improve your own health are far more important than the outcome of the congressional battle.

What you eat, how you exercise, the risks you choose to take or avoid—all these can do far more for your health and the nation's medical bill than any message you send to Congress.

So, before you write or phone Congress, think. Think about your own responsibility, not just theirs."

Statement of Accreditation: Hahnemann University is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to sponsor continuing medical education programs for physicians. Hahnemann University designates each hour of attendance at these activities as 1 credit hour of Category 1 of the Physician's Recognition Award of the American Medical Association.

GIVE PATIENTS YOUR SIDE OF PLAN EXCLUSIONS

Physicians frequently feel frustrated and helpless when faced with exclusion by managed care plans—especially as they deal with patients forced to leave their care.

Communication with patients—giving them an understanding of the policies of managed care plans, and how you feel about the situation—can go a long way toward not only alleviating your frustrations as a practitioner, but also mending patients' confusion and resentment at loss of your services.

A simple letter such as the example at right could be sent by physicians when an exclusion occurs. Informing the patient population of the importance of legislative safeguards is another benefit of this communication. Once patients have experienced first-hand the meaning of managed care plan restrictions, they will not only understand their physician's plight, but also be much more willing to take action to correct the situation. For more information, contact the State Society's Department of Medical Economics at (800) 228-7823.

Note:

Generally speaking, enrollees in a managed care plan are penalized for using a non-participating provider. For example, the plan may reduce the payment allowance or deny coverage completely. (Exceptions to out-of-network penalties generally apply in emergencies.) If you are sure of the terms of the specific plan affecting your patients, you may want to add that in paragraph 2 of the sample letter. But be sure you are correct. If you give out incorrect information, you will frustrate or anger your patients and may be held accountable for the misinformation. Also, keep in mind that some plans don't penalize those who go out of the network—but out-of-network providers can balance bill the patient. The patient should be told whether or not you will balance bill.

How to Tailor Your Letter

Paragraph 1: You may want to explain why you are not participating in the network anymore. For example, if the network is downsizing, you may want to add: "The network decided to reduce the number of physicians from my specialty who are allowed to participate, and did not renew my contract, even though I was providing quality care to my patients."

Paragraph 2: If you are sure of the specific terms affecting your patient, you may want to add that here. **But be sure you are correct (see note, below left).**

Paragraph 3: Disclose any copying charges here. For patient goodwill, you may want to waive those charges in this instance.

Paragraph 4: The paragraph may need to be altered or deleted to the extent that you were given an explanation or the opportunity to appeal.

Paragraph 5: You may want to include a list of local legislators and their addresses and phone numbers. Such a list may be obtained from the Society's Government Relations Department.

Regardless of what your letter says, it should show concern for your patient.

SAMPLE PATIENT LETTER

Dear Patient:

I wanted to let you know personally that as of (effective date of termination), I am no longer participating in (name of network).

I appreciate the trust that you have shown in me, and I would like to continue to serve as your physician. However, your health insurance may not pay for my services as it did in the past. I suggest that you ask your health benefits manager or review your benefits handbook to learn how you would be reimbursed for my services in the future.

If, after looking at your alternatives, you decide to select another physician, I will be happy to forward a copy of your medical record to your new physician. Let my office know if you feel that you need to change physicians, and we will forward you a medical release form.

Unfortunately, what happened to you and me in this case is happening with increasing frequency across Pennsylvania. Insurance plans are excluding physicians from their networks for any reason they choose, without providing any explanation or opportunity to appeal. This often leaves patients with little choice but to find a new physician.

If you are concerned about what has happened, you may want to let the following people know of your concerns:

- **Your human resources department at work.** These people make the decisions about what health insurance plans are offered to employees. If you let them know that you are not happy with your plan, this input will likely figure into the decision whether to keep the plan or to offer others in the future.

- **Your elected officials.** Pennsylvania legislators are now considering safeguards to assure that health insurance plans do not improperly exclude physicians from their networks. Legislators need to hear how patients have been adversely affected by the exclusionary practices of managed care plans. This will help them balance what they have been hearing from those who are more concerned with the financial bottom line than with your health.

- **Your health care plan.** Your health insurance plan may not realize how its decisions are affecting you. You may want to let the plan know that restricting your choice of physician may force you and others to turn to alternative plans.

I want you to know that I will understand the decision you make on your future care. Thank you for the opportunity to take care of you; your well-being remains my primary concern.

Sincerely,
Your physician

ALLEGHENY COUNTY PROPOSES MA PROGRAM RESTRUCTURING

Physicians in Allegheny County are analyzing a proposed health system reform package to restructure the delivery of the local Medical Assistance (MA) program. Proposed by the Allegheny County Department of Human Services, the package seeks to improve access, quality, continuity of care, and outcomes for Medicaid patients, while eliminating duplication of services.

John G. Krah, executive director of the Allegheny County Medical Society (ACMS) explained the new structure in a recent issue (February 11, 1995) of the ACMS *Bulletin*:

- A local not-for-profit health corporation would: take in and pool funds from multiple sources; select and oversee a number of local health plans (anticipated to be managed care entities) that will be required to provide a full continuum of physical health, mental health, drug and alcohol treatment, and human services; and serve as an unbiased, client-supportive enrollment counseling agency.

- All Medical Assistance recipients in Allegheny County, with the exception of nursing home residents, would be required to enroll in one of several health plans that will contract with the above-mentioned corporation. Mandatory enrollment is believed to assure greater savings and eliminate the selection that can be costly in voluntary programs. Current indemnity-like coverage would be eliminated.

- Funding to and through the corporation would include a capitation payment from the Department of Public Welfare as well as portions of other non-Medicaid funding that would normally go to specified services such as mental health, drug and alcohol treatment, maternal and child health programs, and AIDS treatment and care. Again, it is hoped that this would accomplish integration of currently fragmented services in Allegheny County, thereby providing more effective care.

According to Krah, "If this county proposal receives the necessary approvals [and waivers] from federal and state governments, it will mean major changes for the physicians and hospitals treating Medicaid patients [in the county]."

The proposal is supported by grant money from the Robert Wood

Johnson Foundation and the Jewish Healthcare Foundation of Pittsburgh. For further information, call ACMS at (412) 321-5030.

STATE LAWSUIT SPARKS AMA LITIGATION INITIATIVE

A Pennsylvania lawsuit has sparked the creation of the new AMA/State Medical Society Litigation Center, "designed to strengthen organized medicine's presence in [the courtroom] when cases arise that have potential major impact on the practice of medicine."

According to the AMA, the center is an outgrowth of national and state cooperation on two recent cases: 1) in Pennsylvania, the successful appeal to the Health Care Financing Administration, saving physician practices more than \$2 million in refunds demanded by Pennsylvania Blue Shield; and 2) in Minnesota, a case striking down provisions of a provider tax that allowed the state to tax providers outside its borders.

The center is expected to focus on cases involving inappropriate government regulation, patient protection, defense of tort reform, provider taxes, arbitrary coverage decisions, peer review, and ethics. As explained in the February 20 issue of *AMNews*, "The prime selection criteria will be importance of the case to patients and physicians, and the potential for precedent setting."

For more information on the new initiative, call (800) AMA-3211.

STATE HEALTH PLAN CHAPTERS RAISE SOCIETY CONCERN

The State Society in February submitted comments to the Pennsylvania Department of Health on two proposed chapters of the State Health Services Plan.

The plan was mandated by the Health Care Facilities Act. Designed to serve as both a policy and regulatory document, it: 1) identifies clinically related health services that are necessary to serve the health needs of Pennsylvanians; 2) analyzes the availability, accessibility, and affordability of clinically related health services identified in the plan; 3) outlines qualitative and quantitative standards and criteria for the review of certificate of need applications required under the act; and 4) describes a process which permits exceptions to be granted to

the standards and criteria in order to reflect local experience, to ensure access, or to respond to circumstances which pose a threat to the public health and safety.

Of primary concern to the Society is the chapter on managed care.

"Contrary to what some may think, the [State] Society is not opposed to managed care," the Society's letter begins. "Managed care, when properly implemented, can cut health care costs, increase preventive and early-detection care, and coordinate the care of multiple providers. When managed care truly means 'coordinated care,' when it incorporates better communication, closer teamwork, and real dialog between physician, insurer, employer, and patient, then there is potential for benefit to the system."

At this time, however, the Society is concerned that to some, managed care may mean saving costs by reducing the quality of care. The Society also believes patients should be assured freedom of choice and firmly opposes "mandated" managed care.

Specific Society observations about the managed care chapter include:

- 1) "The Department seems to imply that managed care is the only way to reduce health care costs, and that isn't true." In its 1993 position paper on managed care, the Society recommends a number of ways to reduce costs: making physicians and patients more cost conscious, while maintaining patient freedom of choice; cutting government red tape; instituting "meaningful" liability reform; and eliminating duplication of equipment and facilities.

- 2) "We agree that managed care can play a role in reducing health care costs, but equally important is the adoption of safeguards to protect quality and access."

- 3) "We agree with you that people have problems when choosing a health plan—they don't know what the different plans offer. We don't think the standardization of the medical benefit package [as proposed] is the solution." Instead, the Society suggests that a formal grievance system be mandated for managed care plans.

The Society also commented on the HIV/AIDS Services chapter of the plan—expressing concern about the funding needed for the extensive services outlined in the plan, and requesting explanation and reconsideration of a number of key items.

STATE TACKLES HIV/AIDS WITH PREVENTION PLAN

While Philadelphia may well be the major HIV/AIDS epicenter of the commonwealth and one of the six major epicenters nationwide, the fact is 53 percent of Pennsylvania's AIDS cases are *not* diagnosed in Philadelphia. AIDS isn't just a city problem...a Philadelphia problem. Instead, it's a Pennsylvania problem.

Having gained greater knowledge about the disease and its spread over the past decade and a half, and recognizing the urgent need to contain the spread of HIV in the absence of an AIDS vaccine or cure, the Centers for Disease Control and Prevention (CDC) in Atlanta has taken one further step—requesting that each state develop an HIV prevention plan. Pennsylvania's plan, outlined below, was developed late last year by the state Department of Health, Bureau of HIV/AIDS with extensive community input (see sidebar below).

AIDS in Pennsylvania

Pennsylvania recorded 11,940 cases of AIDS between January 1, 1981, and September 1, 1994. According to the plan, though these totals only represent three percent of all U.S. cases, Pennsylvania has the seventh largest concentration of cases among all 50 states.

AIDS in Pennsylvania seems to be spreading in concurrent waves, according to the plan. The first wave, which began in 1981, involved mostly gay, white men; hemophiliacs; recipients of blood/tissue products; and black, injection drug users. The second, more recent wave involved growing numbers of women, Hispanics, infants and children under 13, and heterosexuals.

AIDS in Pennsylvania has spread outward from two areas of the state: the southeast, including Philadelphia, Lancaster, and Chester counties; and the southwest, namely Allegheny County. The spread of the disease in the northeast may have emanated from New York City and Newark, New Jersey. More recently, the rate of infection in rural Pennsylvania has grown alarmingly.

Other state-specific statistics cited in the report include:

- AIDS is the leading cause of death for black males, ages 25-44, and

the fourth leading cause of death for all people in that age group.

- The most common mode of transmission among whites is homosexual contact (81 percent), followed by injection drug use (13 percent) and heterosexual contact (six percent). Among blacks, injection drug use leads (52 percent), followed by homosexual contact (37 percent) and heterosexual contact (11 percent); and among Hispanics, injection drug use leads (72 percent), followed by heterosexual contact (15 percent) and homosexual contact (13 percent).

- HIV was detected in one of every 1,602 mothers participating in a publicly funded 1992 study.

- Nearly 39,000 HIV tests were conducted in 1993 across the state at publicly funded sites.

A plan of action

Prior to development of its Comprehensive HIV Prevention Plan, the Bureau of HIV/AIDS coordinated a number of primary HIV prevention efforts, including counseling and testing services, funded by the CDC; direct or subcontracted services of seven regional planning coalitions for care, education, and prevention services; and health education and risk-reduction activities provided by nine county and municipal health departments.

However, needs assessment studies show that more education at targeted populations—high-risk communities and pre-teens/adolescents—is warranted, along with more extensive outreach and free, anonymous, and confidential counseling and testing in community-based clinics. Also, though past local activities have been well-tracked by the bureau, more coordinated, statewide efforts are needed.

From these and other findings, and a series of discussions, the

Pennsylvania HIV Prevention Community Planning Committee agreed on three broad goals in the commonwealth:

1) Reduce the incidence of HIV transmission by providing culturally, linguistically, and gender-appropriate prevention services in the state of Pennsylvania. High-priority objectives include standardizing training of HIV counselors, developing marketing and outreach plans to reach target markets, and expanding the number and types of facilities statewide that would offer counseling. Re-evaluation of these objectives is also planned as implementation progresses.

2) Reduce the morbidity and mortality associated with HIV in the state of Pennsylvania. Proposed actions focus on increasing awareness of services available to people living with HIV and encouraging early intervention medical and mental health services. Related objectives seek to provide free HIV testing in *every* county and explore the "true incidence" of HIV in Pennsylvania.

3) Reduce HIV-related stigmatization, including that associated with sexuality, culture, addiction, gender, and disability issues. The main objective here is to provide annual diversity training on sexual, cultural, addictions-related, and economic issues to staff and administrators of organizations receiving HIV prevention funding through the state Department of Health.

Inherent to these three goals is linking state and local programs, as well as governmental and non-governmental programs. Also, the state will coordinate efforts with abuse and correctional facilities.

Pittsburgh MD, PhD Play Key Roles

Department of Health, Bureau of HIV/AIDS representatives are quick to note that community input was essential to the development of Pennsylvania's Comprehensive HIV Prevention Plan.

Among those involved: From the physician community, **Donald R. Mattison, MD, MPH**, dean of the Graduate School of Public Health, University of Pittsburgh, served as principal investigator of the plan. Also, past PENNSYLVANIA MEDICINE contributor **Linda Frank, PhD**, of the university's AIDS Education and Training Center, served on the HIV Prevention Community Planning Committee.

Many kudos to them and their colleagues at the university and statewide who volunteered their time to research and develop the plan.

So much to do...

The state's Comprehensive HIV Prevention Plan was completed in the fall of 1994 under the Casey administration; soon afterward, the CDC approved the plan. But, how does the change in administration—with the inauguration of Governor Tom Ridge in January—affect the work already accomplished?

According to Richard McGarvey, a Department of Health spokesperson, though the plan is directly linked to the department, its progress is not

slowed at all. In fact, McGarvey says, the state is actively working to accomplish the goals and objectives set forth in the plan.

FIVE NEW DRUGS AVAILABLE FREE FROM STATE

The Pennsylvania Department of Public Welfare has announced that five new drugs are now available through the state's Pharmaceutical Benefits Program. They are: Mycobutin (rifabutin), Biaxin (clarithromycin), Mepron (atovaquone), Sporanox (itraconazole), and Marinol (dronabinol).

The department also announced two other program changes:

- Diflucan (fluconazole), available through the benefits program since February 1993 to treat only cryptococcal meningitis, is no longer restricted to this disease.
- A number of *disposable* medical supplies used for intravenous Ganciclovir and Foscavir treatments are now available. These supplies include disposable home pumps, sterile water, and various tubing and needles.

People with HIV infection should check with their case managers to learn whether they are eligible for the Pharmaceutical Benefits Program. Individuals whose drug costs are covered by Medical Assistance are ineligible.

Direct questions about the program to (800) 922-9384.

STATS

By 1992, all but three Pennsylvania counties had reported at least one case of AIDS.

Source: Pennsylvania Department of Health, Bureau of HIV/AIDS

CLARIFICATION

Page 14 of the February 1995 issue of PENNSYLVANIA MEDICINE included an updated list of reportable diseases in Pennsylvania. Among the diseases listed was cancer, which prompted inquiries from some members.

To clarify: Cancer is a reportable disease in Pennsylvania, although only by hospitals and laboratories, not by physicians as suggested. Although representatives of the department indicate that they are working to make cancer reportable by physicians in the future, they stress that at this time, physicians need not report incidences of cancer.

Why Do 60,000 Doctors Trust Us With Their Professional Reputations?

In an era of "not if, but when" a doctor will be accused of malpractice, your choice of professional liability coverage is extremely important. We know that *any* allegation can be devastating to both your professional reputation and your personal assets... making the company you choose critical to your future well-being. Many factors should be taken into account when making a decision.

Consider our financial strength and stability. We are rated A+ (Superior) by A.M. Best and AA (Excellent) by Standard & Poor's. No other company with an exclusive focus on the needs of the health care community has higher financial ratings.

Look at our experience. For nearly a century we have specialized in defending and protecting doctors. No other company has **successfully defended** more than 180,000 malpractice claims.

Local service is important, too. Our General Agents and Field Claim Managers work with you on every allegation. They average more than 15 years experience working with doctors and the legal system.

Why do more than 60,000 doctors trust their professional reputation and personal assets with us? No other company combines nearly a century of experience with financial strength and the local service provided by The Medical Protective Company.

CAPITOL CONTACTS, LEADERS WELCOME NEW LEGISLATORS

Eighteen freshmen legislators attended a breakfast in their honor sponsored by the State Society on March 8 in Harrisburg. The goal of the breakfast was to introduce the legislators to the Society, its leadership, and to constituent members who participate in the Capitol Contacts program.

Legislative leaders also attending were: Senate President Pro Tempore Robert C. Jubelirer (R-Blair), Senate Majority Leader R. Joseph Loeper (R-Delaware), House Majority Leader John M. Perzel (R-Philadelphia), and House Minority Whip Ivan Itkin (D-Allegheny).

Following a brief welcome by Society President John H. Hobart, MD, the legislators and 39 member physicians and Alliance members enjoyed a leisurely breakfast and talked informally.

Lehigh Valley legislators and physicians made a strong showing—sharing this table were (left to right): Robert X. Murphy Jr., MD; Henry H. Fetterman, MD; Society President John H. Hobart, MD; Vice Speaker of the State Society House Donald H. Smith, MD (standing); State Senator Joseph M. Uliana; Society Trustee James R. Regan, MD; and Arthur V. Stein, MD.

Representing Delaware County were Society Chairman of the Board John W. Lawrence, MD (left), and Senate Majority Leader R. Joseph Loeper.

Chester County Representative Curt Schroder (left) talks with KePRO President Donald E. Harrop, MD.

Newly elected House Majority Leader John M. Perzel talks with Society leaders from Philadelphia County. Pictured (left to right) are: First District Trustee George R. Fisher III, MD; Representative Perzel; Resident Physician Section Trustee Joyann A. Kroser, MD; and Young Physicians Section Trustee Robert M. McNamara, MD.

Society Lobbyist David A. Thompson (center) introduces Senate President Pro Tempore Robert C. Jubelirer (left) to Richard L. Decker, MD, of Altoona.

Monday, May 1, 1995 • A NEW PAMPAC SEMINAR • Training you in *Effective Lobbying Strategies & Techniques*

This exciting new seminar from PAMPAC offers you the opportunity to go beyond the campaign and become an effective lobbyist for the medical profession. The seminar features a panel discussion with a successful physician participant in the political process, a key representative from the General Assembly, and an AMA lobbyist. There will also be a role-play session and a briefing on timely legislative issues. The luncheon speaker is state Senator John Peterson, chairman of the Senate Public Health and Welfare Committee.

This is a workshop designed to provide physicians and alliance members with the skills needed for more effective lobbying of their state or federal legislator on issues of quality or access.

Fee: \$15 to cover costs of luncheon • Time: 11:00 a.m. - 4:00 p.m. • Date: May 1, 1995 (the day preceding the State Society's Leadership Conference) • Place: Harrisburg Hilton and Towers

To register: Telephone the Society's Department of Meeting Services at (800) 288-7823, extension 1258, or the PAMPAC office at (717) 558-7822.

"Lobbying Techniques Legislators Really Understand"

4 PROGRAMS
1 SITE!

LEADERSHIP
TRAINING!

of the Pennsylvania Medical Society

May 2-3, 1995 • Harrisburg Hilton and Towers

◆ TUESDAY, MAY 2, 1:00 PM

KEYNOTE ADDRESS—**Jeff Levine**, CNN correspondent since 1980, covering medical legislation and regulation on Capitol Hill, Washington.

PLENARY SPEAKERS:

"Medicine's Dilemmas"—**William L. Kissick, MD, DrPH**, a participant in Medicare's original drafting in the '60s, is a prolific writer, commentator, and respected adviser on the U.S. health care scene. He is professor of health care systems, the Wharton School, University of Pennsylvania.

"California's Experience with Managed Care"—**Eugene S. Ograd, MD**, president, California Medical Association, speaks from the cutting-edge of health care change.

PLUS...

- Enjoy an evening of entertainment • Next morning, breakfast with the State Society president
- Attend information-packed workshops on technology, leadership, practice parameters
- Visit exhibitors • Meet colleagues from across the state...ALL FOR ONLY \$70!

Look for your registration form in the April issue of Executive Report.

COME EARLY FOR ADDITIONAL EDUCATIONAL OPPORTUNITIES*

**Separate registration and fees for sessions below*

◆ MONDAY, MAY 1

- ◆ PAMPAC seminar, 11:00 am, "Techniques Legislators Really Understand."
- ◆ HMSS Seminar, 4:00 pm, "Enhancing Physician Leadership in a Changing World," created by the Leadership Institute of the Society's Educational and Scientific Trust.

◆ TUESDAY, MAY 2

- ◆ HMSS Assembly Meeting, 8:30 am, "How to Overcome Obstacles and Organize Physicians," a presentation by **Dr. Ograd**.

The Pennsylvania Medical Society is accredited by the Accreditation Council for Continuing Medical Education to sponsor continuing medical education for physicians.

The Pennsylvania Medical Society designates this continuing medical education activity for 7.75 credit hours in Category 1 of the Physicians Recognition Award of the American Medical Association and the Pennsylvania Medical Society membership requirement.

All faculty participating in continuing medical education programs sponsored by the Pennsylvania Medical Society are expected to disclose to their program audience any real or apparent conflict(s) of interest related to the content of their presentation(s).

For more information, call the State Society at (717) 558-7750 or (800) 228-7823.

OncoLink Completes Hectic Year

Fred D. Baldwin

In its first year, a University of Pennsylvania cancer information service received well over a million calls. OncoLink's first year represents a dramatic challenge to the notion that what happens in cyberspace must mirror a world where specialists talk mostly to specialists and patients are slow to ask questions.

OncoLink, an online cancer information service provided on the Internet by the University of Pennsylvania School of Medicine, celebrated its first birthday on March 7. Its first year was marked by extraordinary growth and marred by a highly publicized dispute among its three co-editors about the role of medical information centers on the information superhighway.

All three editors agreed on OncoLink's main mission: to provide accurate, understandable, cancer-related information for both doctors and patients. All also agree that patients should rely on their own physicians for diagnoses and advice on treatments. During interviews, however, two competing visions of OncoLink emerge.

"This is a medical library," says E. Loren Buhle Jr., PhD, assistant professor of medical physics in the Department of Radiation Oncology at the university's School of Medicine. He was the moving force behind OncoLink's creation and for its first nine months effectively in control of the service. "It does not replace the physician in any way, shape, or form. It brings the patient to the physician's office with a better understanding of the background of a problem. That frees the physician to focus on the things the physician is uniquely qualified to address."

"There has to be some degree of editorial process to filter what is and is not appropriate," says Ivor Benjamin, MD, assistant professor of gynecologic oncology, University of Pennsylvania Cancer Center, and also an OncoLink editor, "as would be true with any other specialty

journal, whether it be a medical journal or a technical journal on aviation or anything else."

These visions may not be polar opposites, but they conflict. Editors, however open-minded, accept more responsibility for the content of what they offer readers than do librarians, however selective. Neither model for an online information service is inherently superior—the question is whether the same service can offer the advantages of both. For roughly nine months, the astonishing growth of OncoLink seemed to suggest that the answer might be, "Yes."

The roots of OncoLink go back to 1989 when Dr. Buhle's daughter, then three-and-a-half years old, was diagnosed with acute lymphoblastic leukemia (ALL). Despite his own scientific training and that of his wife, a critical care nurse, shock prevented them from absorbing most of what their daughter's physician told them. Even with access to a medical library and computer skills, Dr. Buhle found it hard to locate current, reliable information on treatment options. Realizing that the average patient would be even more dependent on the opinion of one or two physicians, he became active in patient-oriented support groups.

In 1993, Dr. Buhle began participating in the Cancer Forum on CompuServe, the heavyweight among commercial vendors of online services. He found himself answering similar questions from hundreds of people, and envisioned an almost universally accessible service that would be both an online library and question-and-answer center.

The Internet offered the ideal vehicle—a mega-network using telephone lines and other channels to connect thousands of networks, collectively estimated to reach 30 million individual users worldwide.

Realizing that the service would need medical expertise, Dr. Buhle teamed up with Joel W. Goldwein, MD, associate professor of radiation oncology at Penn, who suggested the name OncoLink and became a cofounder of the service at the medical

Mr. Baldwin, a contributing author from Carlisle, is co-author of a book on locating medical information to be published by Little, Brown & Co. in the fall of 1995 under the title, InfoMedicine.

school. They were soon joined by Dr. Benjamin as a third "co-editor-in-chief."

OncoLink opened on March 7, 1994. The response exceeded anyone's expectations.

By January 31, 1995, in just 330 days of operation, OncoLink had handled 1,248,706 transactions—about 10,000 per weekday and 3,000 on weekends. These contacts and questions came from 16,840 Internet addresses worldwide. The number of individuals using the service has to be much larger since major Internet nodes (e.g., Harvard University, CompuServe, America Online) often count as a single address.

Dr. Buhle worked 16-hour days to find time to post new material and to improve OncoLink. Probably 80 percent of the material posted consisted of carefully reviewed medical information from other online sources such as Physician's Data Query (PDQ), but Dr. Buhle wrote many articles, including nontechnical summaries of medical literature. Other articles were written by Drs. Goldwein and Benjamin.

The official policy seems always to have been that OncoLink postings would go through some kind of peer review process, with disputes arbitrated by a University of Pennsylvania advisory board. In practice, Dr. Buhle exercised control.

"He was the only one who had access to the hardware and software," says Dr. Benjamin. "He, in essence, controlled the printing press. I did not have password access and neither did Dr. Goldwein. He would post something that we would request not be posted or that we had requested have further review."

Dr. Buhle says that an editorial review board to which he referred materials acted slowly or not at all. He says, "What value is it to the patient who needs something he can ask his doctor about next week to say, 'We'll get back to you in six months?'"

"I worry about editorial quality, too," he says. "Why is it that I never got a negative comment from outside of the University of Pennsylvania? Every once in a while, a physician would say, 'Loren, that's great, but it's kind of old.' I'd say, 'Thanks for helping me make this a better resource for everyone.'"

In December, tensions between Dr. Buhle and his co-editors came to a head. The exact sequence of events is in dispute, but the upshot was that Dr. Buhle lost control of OncoLink. He retains the title of co-editor, but any editor can now remove anything any other one posts. In addition, his contract with the university will not be

renewed next year, although he notes that others are in the same boat as the result of downsizing.

OncoLink itself is still available, and it's an impressive resource. Its menus are divided into four general categories: 1) disease sites (e.g., breast cancer, ovarian cancer); 2) medical specialties (e.g., medical oncology, radiation oncology), 3) news items (e.g., FDA/CDC announcements), and 4) links to other cancer-related resources on the Internet.

In technical terms, OncoLink is searchable either by Gopher, a menu-oriented search program, or by World Wide Web, a program that permits searches by keywords anywhere in a document and even that, for users with suitable equipment, provides access to sound and images. Among image files of interest to physicians are tumor boards for educational purposes that include x-rays, MRI scans, and histologic slides.

Dr. Goldwein says the university is unequivocally committed to maintaining OncoLink. The controversy attracted substantial attention on the Internet and among commercial online services, notably the CompuServe Cancer Forum, where Dr. Buhle was almost universally perceived as a martyr to the cause of open access to information for patients. Drs. Goldwein and Benjamin reject that image.

"I have no qualms," says Dr. Benjamin, "with Loren Buhle buying his own computer and calling it 'LorenLink' and putting up anything he wants about cancer. But don't say it's coming from the University of Pennsylvania Cancer Center. You can put all the disclaimers you want, but if we're putting it out, it's a tacit approval in my mind. That's the beauty and charm of the Internet, that it's such a free-for-all. But when it's coming out with [the university's] nameplate, we feel a moral and ethical obligation as professionals to make sure that information has been reviewed appropriately."

"It's a matter of balance," Dr. Buhle says. "My vision is for doctors to say, 'Learn, read everything you can, and then we'll talk about it.' That's not the vision of my co-editors. Should libraries protect themselves by removing from the shelves all books whose contents people could possibly use to hurt themselves?"

All parties agree that if OncoLink's history does nothing else, it shows a tremendous hunger for specialized information on the part of patients—and, for that matter, on the part of nonspecialist physicians, nurses, and other health professionals. ☐

Pitt Adds Interactive Radiology to Curriculum

The University of Pittsburgh School of Medicine is one of 40 U.S. medical schools and several universities abroad using cutting-edge technology to master concepts of normal anatomy and imaging.

Radiologic Anatomy is an interactive computer developed at the University of Florida which combines descriptive text, still images, video segments showing fluoroscopy studies and radiological technique, and cadaveric still photographs. Its developers and users believe it is a cost-effective way for medical schools to train students in diagnostic imaging, normal anatomy, and neuroanatomy.

Radiologic Anatomy is available in Macintosh and Windows™ formats, as well as on CD-ROM. For additional information, contact Gold Standard Multimedia, Inc., at (904) 373-1100.

You're Never Too Young to Plan Your Retirement

Robert L. Lamb

Young physicians have time on their side when it comes to retirement planning: Starting early assures more security—and less worries—later in life.

Can young physicians just entering practice, carrying thousands of dollars of debt, dare think about retirement? Not only must they think about it, they must formulate a savings plan to fund it, even if the amounts seem nominal. Some experts are advising physicians to put away as much as one-fifth of their net income each year to assure an adequately funded retirement.

A number of factors are driving the need to begin financial planning immediately:

- Long-term inflation is devastating.
- Career stability is disappearing.
- Income growth is far less predictable.
- Retiree benefits are eroding.
- Life expectancy is rising.
- Retirement lifestyles frequently require 75-80 percent of pre-retirement income.
- Adult children keep coming home.
- Elderly parents require more care.

Time is an ally

It's hard to overstate the importance of time in terms of building an estate and accumulating retirement security. One example of the relationship between savings and time is a scenario which plots the annual investment needed to accumulate \$100,000.

If we assume eight percent interest, it would require an annual investment of \$6,392 to accumulate \$100,000 in 10 years. However, saving over 20 years at eight percent interest would require only a \$2,023 annual investment. And if you started immediately and saved over a 30-year period, you would only have to invest \$817 a year![†]

Another way to illustrate the power of time and asset growth is to assume that you saved \$100 per month in investments that yield a 12 percent return. In the fortieth year of your program, you would become a millionaire!

James Glassman, writing in the *Washington Post*, uses some illustrations from Smith Barney Consulting. In this scenario, the husband retires at age 62 with a fixed pension of \$20,000 per year. The couple also receives about \$10,000 annually in Social Security benefits. In the illustration, inflation runs four percent per year, and investment income is projected to be seven percent a year after taxes. The couple's nest egg at retirement is \$500,000.

Maintaining a lifestyle costing \$80,000 a year, how long does the \$500,000 last? Just 11 years! If the desired income level at retirement remains at \$80,000, then a more realistic nest egg would be \$1 million.

Paying and saving for college

Could it be possible that you would find yourself in the unwieldy position of paying off your own educational debts while also saving for your kids' college education? It's a real possibility. If you estimate a current annual cost of \$18,000 for private college tuition, fees, room, and board, and factor in a conservative five percent annual inflation rate, we can predict that in 18 years, the annual cost of college will be \$43,200. (The current college inflation rate is over eight percent.)

Tax deferral, a saver's friend

A typical example of tax-deferred earning runs like this: Assume a \$10,000 initial investment for a person in the 31 percent income tax bracket. At the end of 10 years, a taxable investment would have grown to \$14,033, while the tax-deferred investment would be worth \$16,289.

At 15 years the tax-deferred investment is ahead by slightly more than \$4,000 and at 20 years has climbed to \$26,533 as compared to the taxable nest egg at \$19,597 or a saver's advantage of nearly \$7,000.

Net worth—the place to start

A healthy checking account could mean that you're doing well, but until you compute your net worth, you won't know for sure. A thumbnail net worth spreadsheet might have four columns: assets and liabilities, 1993, 1994, and percent increase (or decrease).

Mr. Lamb is planned giving officer of the State Society's Educational and Scientific Trust.

Your list of assets should include: retirement plans (including IRAs), personal bank accounts, stocks and mutual funds, real estate (except the office), other investment assets, market value of home, life insurance cash values, and miscellaneous. You'll also want to include the value of your practice—for an objective view, consult with your accountant.

In the liability column, find: mortgage and other long-term balances, taxes payable, and bills due. If you turned a profit, celebrate; but not before you've analyzed the numbers to be sure that your good fortune didn't result from a one-time, unusual event rather than your plan.

Start with a will

While financial advisers abound and theories are many, the consensus is that a sound financial plan begins with an effective estate plan. The will, drafted by your personal attorney, works with and complements the trusts you may establish to minimize estate taxes. Be careful regarding so-called "short cuts" such as jointly held assets. They can defeat a well-crafted estate plan and cause your heirs to incur unnecessary estate taxes.

Ready, fire, aim

A savings program devoid of an objective could cost you thousands of dollars. Better to spend some consulting money first to have an impartial expert show you the alternatives and their consequences. A plan to finance a new car or house would be different from one established to pay a child's college costs or fund your retirement.

One recent survey determined that despite the fact that few physicians are trained financial planners and have even less time to study the markets, most choose to manage their own pension plans and family savings plans.

Choosing a financial adviser

- Don't use your friends.
- Don't do business with anyone who won't tell you exactly how and how much he or she is paid.
- Put together a list. To build your list, consult your attorney, your tax accountant, the Institute of Certified Financial Planners (800-282-PLAN), and the International Association for Financial Planning (800-945-IAFP). Members of the American College of Life Underwriters (CLU) are also capable of providing financial planning information.
- Create a screening list, and make your phone calls.

- Narrow your list to three candidates, and schedule interviews with an agenda.
- Check references.

Stocks, the conventional wisdom

A quick review of inflation over 20 years, taxes, and the return on all investments leads most experts to the conclusion that meaningful growth of assets can only occur if sizable portions of savings are invested in the stock market.

Beyond that, there is much less agreement. Which stocks to choose and how long to hold them defy consensus, hence, investors frequently opt for mutual funds where they seek solace from the expertise of fund managers and the diversity implicit in the fund concept. Also implicit in the equity theory is the understanding that the market outperforms other options only if the investor has the patience to wait out its daily, weekly, and monthly fluctuations. In this context, long-term is often interpreted as not less than three years.

The tortoise wins

With the advent of on-line trading, no doubt more and more physicians will be tempted to wrap up the day by dialing their brokerage service on their modem and doing a little trading. However, the data seem to indicate that those who make it a habit to put a regular amount of money into the market do as well if not better in the long run.

In a process known as "dollar cost averaging," savers invest a set dollar amount in a mutual fund every month, regardless of market behavior. Over the long haul, their automatic purchase of shares when the market is down lowers their average cost of investing in the fund.

"Cold calls" and other "opportunities"

Most "go-go" investment schemes are soon "gone-gone." To minimize risk, look to the well-known indexes and a financial adviser with a proven track record.

Finally, these observations:

- It's very hard to win the lottery if you don't play.
- Several times a year, the dart board team wins the *Wall Street Journal* Experts Contest.
- In 1994, the hero money manager of Wall Street was a 17 year-old high-school junior from Troy Michigan. Matt Seto came up with a 33 percent return on investment in his micro-mutual fund while the best the Dow Jones Industrial Average could do was 2.1 percent. ☺

The YPS—It's You!!

Jeffrey H. Baker, MD

The Young Physicians Section (YPS) represents physicians under the age of 40 or in the first five years of practice. It is a "special interest group" of the Society. Like the Hospital Medical Staff (HMSS), Resident Physician (RPS), and Medical Student Sections (MSS), it meets to discuss issues pertaining to its particular membership, then works to help shape and influence health care policies surrounding those issues.

The issues and pressures felt by young physicians are not entirely unique to our group, but the section provides an open forum of discussion and debate for seeking solutions to those problems. Such open discussion among peers helps to break down the stereotype of "the old-boy network" of organized medicine.

The section's influence reaches from the local to the national levels, representing approximately 13,000 young physicians across the state. We are a strong voice at the State Society's House of Delegates, as well as on numerous committees, commissions, and task forces within the organization.

Who runs the YPS?

You can and do run the YPS!

Each county medical society selects a delegate to attend the annual meeting in October. The delegates, as well as the section's Governing Council, bring issues, in the form of resolutions, to the meeting to be discussed, modified, and, if appropriate, passed on to the House of Delegates.

At the annual section assembly meeting, the Governing Council is elected by the delegation to meet regularly, oversee and report on activities throughout the year, and provide direction for the section's growth. A representative is elected to serve as trustee from the section to the Society's board, the highest level of influence and command in the

organization. The opinion of the YPS trustee is respected and sought after by the other board members.

What has the YPS done for me?

The State Society's YPS has a strong history of helping to educate and influence other physicians about the problems facing today's young physicians.

In 1990, we were successful in establishing a seat on the State Society board so our voices would be better heard at this level. We can now

"The section's influence reaches from the local to the national levels, representing approximately 13,000 young physicians across the state."

work with the organization to help mold the future direction of medical practice within the state. The Society recognizes the value of our input and actively seeks the opinions and expertise of young physicians.

The Society's YPS was also responsible through the AMA-YPS for establishing a seat at the AMA Board of Trustees for young physicians. The AMA's first young physician trustee will be elected in June.

So far, one of our most significant accomplishments was the creation of a two-year graduated dues program, which began in the early '80s, to help new physicians become involved in organized medicine without a significant financial burden at the beginning of their practices. This year, that program was enhanced to a four-year program.

Also this year, we have brought forth the issue of restrictive covenants in private and corporate medical practices for investigation and debate. The section hopes to accomplish state reform and relief

from overburdensome and unfair practices.

The section has also voiced concern about the urgent need to investigate, and perhaps establish, a statewide, physician-owned entity to provide cost-effective medical care and compete with managed care corporations across the state.

At the national level, the State Society's YPS, through the AMA-YPS, was instrumental in forcing the federal government to recognize the disparity of payment to new physicians by Medicare and to reinstate equal reimbursement for services rendered to their patients.

Our actions can and do make a difference in influencing policies for physicians at all levels of medical practice.

What should I do?

Get involved—bring your opinion and perspective to the discussion table! Go to your county medical society meetings; bring along colleagues; raise issues that concern you. Encourage others to join the State Society and AMA, and to support their efforts on your behalf.

If you have a concern regarding any issue relating to the practice of medicine, let your county delegate to the YPS know, and work with them to seek a resolution or solution to the problem. Volunteer to help your county delegate in the section; run for the position yourself and take part in discussions at the state level.

Don't forget to attend the upcoming Leadership Conference in Harrisburg, May 2-3, 1995, and plan to join us at the section meeting in Hershey, October 26—you do *not* need to be a county delegate to attend!

Take an active part in shaping your future.

Dr. Baker, a State College family practitioner, is a delegate to the State Society's House of Delegates and the AMA's Young Physicians Section.

Looking for Dr. New: Hints That Will Help You Hunt

The Health Care Group

Every day, practices are looking for new associates and physicians are looking for places to work. Essentially, it is no problem at all for you to expand your practice. The difficult part of the proposition is to enter into a lasting relationship. To help you understand the process, here are 15 hints to consider:

1. Really *need* a new associate. Assess your patient volume, scheduling, and practice growth over the past two years; consider the number of patients you are treating, your well-patient backlog, and patient waiting time for procedures. A management consultant or your specialty organization can advise you of industry standards. Never recruit just to improve your lifestyle; make this a good *business* decision.

2. Ask you hospital's physician services department if it has received any inquiries about job opportunities in your specialty.

3. Contact residency program directors within a 30-mile radius of your office; in many cases, a young physician stays in the area where he or she was a resident.

4. Directly contact all the residents and fellows concluding their training at institutions within 30 miles, informing them of your opportunity. Send a letter to each resident/fellow, have copies of your letter posted on residency program bulletin boards, or placed in the job opportunity files.

5. Advertise in state and local medical journals and national specialty publications to attract a significant number of in-practice physicians.

6. Network. Talk to your friends and colleagues about physicians who recently left medical positions or are considering new opportunities.

7. Hire a full-service recruitment firm, which can help you identify your needs, fill your position, and develop a business arrangement that will satisfy your newly hired physician, you, and your partners.

8. Schedule your first conversation with the candidate, by telephone, at a time that is convenient for both of you. If either or both of you are at

work during this conversation, distractions—expect many of them—will hinder the necessary flow of information.

9. Speak to at least four references. Letters of reference are helpful, but you can get a better understanding of the candidate by speaking to the references directly. It allows you to ask follow-up questions if the information you receive from the reference is incomplete or ambiguous.

10. Before you discuss financial arrangements with a candidate, make sure you are comfortable with the candidate; consider not only training and, if appropriate, experience, but also the candidate's clinical/medical philosophy, and his or her personality. One of the worst mistakes you can make is to hire a

"Your 'gut feeling' about somebody is rarely wrong."

physician with a "Type A" personality to join your laid-back, relaxed practice—or vice versa.

11. Make sure the candidate wants to join your practice because of you and your partners, your location, your philosophy—not solely because of the money. Money is important, but it should be more important that the new associate is professionally, personally, and clinically fulfilled in his or her new work environment.

12. When you do talk turkey with a candidate, know the financial arrangements, business arrangements, and contractual issues that may arise. If you seem to be unprepared, you may lose negotiating leverage. You should offer the deal, rather than let the candidate establish the terms.

13. Spouses/significant others are vital to the negotiating process, but agree to keep them out of it until you and the candidate show serious interest in moving forward. Your first face-to-face meeting with the candidate will probably be more of a whirlwind visit. You will want the candidate to see how your practice operates, meet your people, and ask questions. Either party's spouse/significant other may slow the process and interfere with the information-gathering process.

14. When you extend a written offer, make sure it includes a deadline for response; typically 30 days is plenty of time for the candidate to review the contract with an adviser, suggest any revisions, and agree to final terms. If the process is delayed more than six weeks, and the candidate turns down your offer, you will find that some candidates may no longer be available and others may have lost interest in your practice. You may have to start the process over again.

15. Trust your instincts. If you like a candidate, his or her references check out, and your professional, personal, and clinical philosophies are similar, make an offer. Your "gut feeling" about somebody is rarely wrong.

Have fun. Even though this is serious business, and the process tends to be time consuming and emotionally draining, remember that if a particular candidate is wrong for the job, the next candidate may be "Dr. Right." Some candidates will play games, lead you on, waste your time; there is nothing you can do about that. Take the time to do the job right the first time. You will benefit from the effort. So will your practice, your patients, and your new associate.

The contributing author, Wayne G. Grodsky, is a consultant with The Health Care Group, a national medical practice management consultation firm based in Plymouth Meeting.

Communication as a Medical Skill

William Schwartz, MD

Research and case studies show that a strong physician-patient relationship may be the best malpractice insurance for physicians.

If you are involved in the care and treatment of patients, ask yourself the following question: "What do I want to accomplish when I practice medicine?" Though the answer can take many forms, at least part of it is likely to be that you want to make people as healthy as possible. Then, if you dare, ask the next question: "Am I satisfied with the result?" Be advised that patients are asking themselves similar questions about the care you provide.

Technology has brought us far in the diagnosis and treatment of disease. But because the practice of medicine depends upon human interaction, and because both doctor and patient come to the medical interview with a distinct set of values and expectations, communication is also an essential tool. It is the oldest and most common medical procedure used by physicians. It is also an important factor influencing patients' ratings of physician performance and physicians' satisfaction with their chosen profession.

As with any interaction in life, the better the communication, the better the outcome. The dexterity with which a physician wields the tools of communication can, in fact, mean the difference between a positive outcome and a disastrous one.

Consider, for example, Scene 1 of the role play (below).

In this fictional case study, the relationship between the doctor and the patient's mother started off on the wrong foot and proceeded steadily downhill. Both parties allowed differences in perspectives, aided by the external stress of their respective situations, to prevail. Unfortunately, neither could summon the skill to avoid a communication breakdown, to the detriment of the child they were both trying to help.

The role of communication

A body of research on physician-patient communication has emerged in recent decades. In addition to increasing the satisfaction of doctor and patient,¹⁻³ studies show that effective communication improves diagnostic accuracy.^{4,5} The physician will have a more informed understanding of the patient's condition and can make the most appropriate medical decision regarding the patient's health.

Dr. Schwartz is associate chair of pediatrics, Children's Hospital of Philadelphia, and associate dean of ambulatory care education, University of Pennsylvania School of Medicine. He serves as a member of the volunteer faculty of the Bayer Institute (formerly the Miles Institute for Health Care Communication), based in West Haven, Connecticut.

Role Play—Scene 1

It is early Sunday morning. The resident on ER duty is coming to the end of a 24-hour shift. The staff is two people short; the waiting area is filled. The next patient is a 14-month old boy whose only apparent symptom is a temperature of 104 degrees. His mother begins by complaining about how long they have waited to be seen. The resident, pressed for time, ignores the complaint and opens the following dialogue:

Resident: Have you given him anything to get the fever down?

Mother: I tried alcohol baths and cold compresses, but they just made him scream.

Resident: Alcohol baths can be dangerous. Did you give him an analgesic—Tylenol or anything?

Mother: No, I didn't...

Resident: Okay, first we'll give him medication to get that temp below 101; then we'll run some tests.

Mother: Some people don't agree with that approach. I read in a magazine that fevers can be good. They're one of the body's ways of fighting infection, and...

Resident: I doubt that the writer has a medical degree—if so, he would understand the importance of reducing such a high fever.

Mother: No, I don't think she has a medical degree—but then I don't think doctors are the only ones in the world who know about health.

Resident: Look, there really isn't time now for debate. I'm going to have the nurse give him an analgesic, and then...

Mother: (with an icy glare) No, you are not. I want to find out what's causing the trouble, not just mask the symptoms.

Resident: (returning the glare) If you don't want us to treat this child, then why did you come here?

Mother: Doctor, that is a very good question. (The mother picks up her child, walks to the desk, and asks to see the hospital administrator.)

Resident: *I can certainly understand your hesitancy to seek chemical solutions. I think you'll be interested to know that studies have shown alcohol can be absorbed through the skin.*

Mother: *What studies are those?*

Resident: *They can be found in medical journals. A good library could help you find them. And I agree that all fevers do not need treating. However, wouldn't you agree that your son is suffering a lot of discomfort?*

Mother: *Yes, he is.*

Resident: *And 104 degrees is approaching a dangerous level, especially in view of his age. Giving him a minimal dose of Tylenol will help to make him comfortable while we get to the bottom of what's causing the trouble. Shall we try it?*

Mother: *Sounds reasonable.*

Resident: *Good. Is there anything else you'd like to discuss with me?*

Several methods can help make a treatment plan clear and acceptable to the patient:

- 1) Explain the most important points first.
- 2) Write out instructions.
- 3) Ask the patient to restate the treatment plan.
- 4) Establish priorities, if the plan involves several goals.
- 5) Inform the patient of possible side effects and how to handle them.
- 6) Involve the patient's family as a support system.
- 7) Summarize the discussion at the end of the visit.

The expression of empathy and respect comprises one of the most important groups of communication skills. Patients judge the empathic skills of a physician through nonverbal communications such as body language, facial expressions, and tone of voice.¹⁵

Good inquiry techniques will enhance the physician's capacity for empathy, since true feeling for another's situation comes from actual knowledge of it. A good way to initiate the inquiry process is to begin with open-ended questions and allow the other person a period of uninterrupted talk. Typically, doctors interrupt patients within 18 seconds after they begin explaining their symptoms. Studies show little, if any, total interview time change when a patient is allowed to speak without interruption, and most patients complete their statements in less than 60 seconds.¹⁶ Instead of interrupting the mother twice, the resident could have quickly determined her viewpoint and possibly avoided antagonizing her.

The resident might ask the mother to explain more about the magazine article she is citing. By listening to her response, he could determine how best to translate his own medical knowledge into a language the mother would understand. Then, invoking the mother's inquisitive mind and dedication to her child's best interest, the resident might achieve the outcome in Scene 2 of the role play (at right).

The physician's ability to get past communication barriers can thus make it possible for the patient to receive much-needed care. By focusing on their mutual goal—diagnosis and treatment of the child's condition—doctor and mother were able to form a relationship that worked.

After the tests are completed and a diagnosis is imminent, the doctor can educate and enlist the patient in a realistic treatment regimen. Patients typically forget 40-60 percent of what they are told¹⁷ and follow treatment regimens only 50 percent of the time.¹⁸ Good instruction techniques help patients understand and accept the diagnosis and treatment plan, improving the likelihood of adherence (see box, at right).

Physicians are not born with the ability to communicate with patients. Whether we think of it as an art, a science, or both, communication is a learned skill. Following practices like the 4E model can help physicians develop this skill and improve the health care experience for both doctor and patient. ○

References available upon request.

Research also indicates that the use of effective instruction techniques increases treatment adherence.^{6,7} Both the lack of a shared language and patient uneasiness can affect the patient's listening and comprehension skills. Also, the signs of illness or the fear of illness can make a patient anxious. The physician can adopt several simple communication measures—such as using layman's terms and asking the patient to repeat the instructions—to determine whether the patient understands and agrees with the treatment regimen.

Several studies have shown that it is often poor communication and subsequent anger that lead patients to file malpractice claims.⁸⁻¹⁰ In fact, poor physician-patient communication is believed to be the major cause of three out of four medical malpractice claims.¹¹ Research into the origin of malpractice actions includes anecdotal evidence that a strong physician-patient relationship may prevent the patient from suing even if a problem develops from a medical error.¹²⁻¹⁴

With so much evidence pointing to the value of good communication skills for physicians, a number of medical schools have incorporated communication programs into their curricula. Such programs are also being embraced by medical societies, managed care organizations, and insurance companies.

One of the more well-established of these programs includes a workshop, offered by the nonprofit Bayer Institute (formerly the Miles Institute for Health Care Communication), which organizes communication techniques into a model known as the 4Es: engage, empathize, educate, and enlist.

Employing the 4E model

Keeping in mind that the four skills overlap and are not necessarily employed in order, let's return to our opening case study and consider some ways the unhappy resident might achieve a better outcome.

First, the child's mother provides an excellent clue to her own emotional state with her first words of complaint. Instead of ignoring the complaint, the resident could consciously take a few seconds to look her in the eye and acknowledge her feelings. For example, he could say: "It's frustrating, I know, to wait so long with such a small child." In fact, what the mother is feeling is not unlike the frustration the resident is experiencing at the end of a long and stressful shift. Once he recognizes this, he can put himself in the mother's place and begin the interview on a more positive note.

Patients' Work May Hold Key to Illness

Maureen Hoepfer

Because almost 70 percent of U.S. employees work in facilities without medical services, physicians should consider a patient's occupational history to assure accurate diagnosis and appropriate therapy for a patient's illness.

A substantial amount of illness, injury, and death is attributable to or affected by occupational and environmental conditions. In Pennsylvania, an estimated 329,000 injuries and illnesses occurred in private industry workplaces during 1993, according to a survey released earlier this year by the state Department of Labor and Industry. Nationally, there were more than three million disabling work injuries reported in 1993 (see Figure 1, on next page). Of these, about 9,100 were fatal.

"Most adults in the United States spend almost 25 percent of their time in the workplace," says Joseph J. Schwerha, MD, MPH, FACOEM, general manager of health services and medical director of U.S. Steel Group in Pittsburgh. "Some people work for large companies which have occupational health departments or divisions to monitor employees' health, but we probably have the majority working in situations where there is no medical supervision over the workplace. In these cases, these workers' overall health is the responsibility of their personal physicians."

A study conducted in 1988 by the National Institute of Medicine found that approximately 70 percent of the nation's 104 million employees work in facilities without medical services.¹ For most workers, their personal physician is the first contact

they have for medical advice. "It is this physician who must be alert to a potential occupational or environmental cause of an illness, and then call on available resources for an accurate diagnosis and appropriate therapy," Dr. Schwerha says.

Lack of training and resources

The institute's study found, with few exceptions, that physicians are inadequately trained in occupational and environmental medicine. "All practicing physicians have a need to better understand the relationship between health and work, and to adequately diagnose, treat, and prevent work-related illnesses and injuries," says J. Frederic Green, MD, FACOEM, president elect of the American College of Occupational and Environmental Medicine (ACOEM). "Unfortunately, most physicians have received little training in this area in medical school."

The lack of teaching time for occupational and environmental health in medical school curriculum has been amply documented.² The Institute of Medicine's study concluded that the teaching of occupational illness to medical residents is also inadequate.³

The primary care physician or specialist confronted by unfamiliar clinical problems of an occupational or environ-

mental nature often lacks a ready source of information and clinical consultation, according to the study.⁴ Standard textbooks of medicine and the more widely read general medical journals provide little organized information about this field. (ACOEM publishes the *Journal of Occupational and Environmental Medicine*.)

This deficiency is further compounded by the lack of board-certified occupation-

"Various and manifold is the harvest of diseases reaped by certain workers from the crafts and trades that they pursue; all the profit that they get is fatal injury to their health."

*Translated excerpt from
De Morbis Diatriba
(Disease of Workers)
by Bernardino Ramazzini,
1713.*

Ms. Hoepfer is a marketing associate for the Society's Educational and Scientific Trust. This article is one of a series, begun in January 1993 and ongoing through 1995, sponsored by the Trust's endeavor to address public health needs, Keystones of Public Health.

al and environmental physicians whom physicians can contact for a consult. Of the more than half a million physicians in the United States, the American Board of Medical Specialties reports that only 2,161 are board certified in occupational medicine. Of these, only 85 reside in Pennsylvania. The Institute of Medicine's study indicated that it is not known to what extent physicians recognize and diagnose occupational and environmental illnesses, but the researchers said it is assumed by many to be less than optimal.⁵

The occupational history

A major problem affecting the diagnosis and treatment of work-related illnesses, according to Dr. Schwerha, is that many physicians fail to take adequate occupational histories of their patients. In one study of an academic family practice center, only 24 percent of the 624 patient charts reviewed mentioned the patient's occupation.⁶ Only two percent of the charts had any information on exposure, duration of present employment, and past occupations. "Detailed histories are the keys to uncovering many occupational and environmental diseases," says Dr. Schwerha.

In even minor clinical problems, Dr. Green says, a physician should ask about the patient's employment status—full-time work, part-time work, modified duties, unemployed, or retired. To determine potential exposures to occupational hazards, he says, physicians should also inquire about past job duties, occupational titles, the type of industry, and dates of work.

In taking a history, a physician should ask about past occupational health problems, protective equipment used, and known health hazard exposures. For patients with a specific diagnosis, a work history should be explored to look for possible causes. For example, a worker with aplastic anemia or acute myelogenous leukemia should be questioned about benzene exposure.

By taking a detailed occupational history, a physician may be able to identify significant exposures or discover occupational risks for some workers. For example, Dr. Green says, auto body painters should be questioned about wheezing or dyspnea. These symptoms suggest occupational asthma from isocyanates in the paints.

The depth and focus of an occupational history will vary according to the situation, Dr. Green explains. Complex cases require a comprehensive survey. "A patient with peripheral neuropathy, for in-

stance, may have been exposed to several chemicals over a decade. The attending physician will need to ask a significant number of questions to try and determine which agent is most likely the cause of the problem," he says.

A complete history also helps the physician understand a patient's individual susceptibility that may modify the response to an occupational hazard. For example, asthma may predispose a worker in a pulp and paper mill to severe bronchospasm from an otherwise mild chlorine exposure. Previous health problems, exposures, allergies, medications, drug or alcohol use, and smoking may alter the effects of a hazard and should be included in the occupational history. The identification of non-occupational exposures in the home or from hobbies is also important, Dr. Green adds.

Physicians may find a patient-administered questionnaire to be a useful tool for eliciting an occupational history, Dr. Green says. The worker may complete a form in detail, consulting records if necessary. Some items that could be included on the questionnaire include: employer's name and address, dates worked, work status (part time, full time, seasonal), type of industry, job duties, known health hazards (dust, solvents, noise), protective equipment used, and previous work-related problems or illnesses. Samples of →

field-tested patient surveys can be found in medical literature.⁷

"It is vital that the occupational history be as accurate as possible," Dr. Schwerha emphasizes. "Some patients are good historians, and some are not. It's possible that a physician may have to consult with a patient's family or employer to get a more detailed picture."

Prevention

Physicians should also look for opportunities to prevent occupational and environmental illness in patients under their care, says Dr. Schwerha. "Prevention should be one of the foremost issues that a physician discusses with his or her patients," he explains. "A physician should encourage a worker to protect himself or herself in the work environment by wearing the necessary protective gear or avoiding exposure to a potentially hazardous chemical."

"A good example of this is a small auto body shop which employs a small number of people. You'll find that in some situations, the workers will be wearing respira-

tors, but more likely, you find workers grinding in dusty areas with no protection whatsoever. The physician has to be the one out there encouraging prevention... telling his or her patient to wear a respirator. If the physician doesn't, chances are nobody will. Once the damage is done, in many of these disease processes, there is no turning around."

To be effective, Dr. Schwerha says, a physician must talk to the patient in layman's terms. "You need to explain the problem in such a way that the patient understands what you are talking about. Make sure the patient knows and understands the safety regulations in place at his or her worksite. And then follow up. Ask the patient about what is happening in the workplace in subsequent visits."

Dr. Green believes physicians can play a vital role in preventing occupational illnesses that goes beyond direct medical supervision of patients and individual patient education. Physicians with some knowledge of occupational medicine are valuable resources to companies to help identify work hazards, to make recom-

Trust Promotes Worksite Wellness Conference

Rising health care costs and health system reform are challenges facing the way employers provide health management benefits to employees. At a time when businesses are investigating how to use health care dollars more wisely, wellness programs offer a partial solution.

The State Society's Educational and Scientific Trust has played an integral role in a statewide effort to encourage employers to implement worksite wellness programs. For the past two years, the Trust has been involved in planning and promoting the **Pennsylvania Worksite Health Promotion Conference**. The 1995 conference will be held May 18 at the Harrisburg Hilton and Towers. More than 200 business representatives are expected to attend.

Janet M. Edmunson, a nationally recognized expert in the field, is the keynote speaker at the conference. Her presentation, "Major Issues in Health Promotion for the '90s and Beyond," will explore the major trends in corporate wellness programs and give practical tips on applying them. Ms. Edmunson currently works for Human Kinetics, a company based in Newton, Massachusetts, where she is development director for the Healthy Achievers Program, a wellness package for worksites.

This year's conference theme, *Worksite Health Promotion: What Works*, includes workshops on a wide variety of work-related health care topics. Thanks to the Trust's efforts, a physician will serve on the conference faculty for the first time. Thomas Weida, MD, a partner in the Rothsville Medical Center, Lititz, will present a program entitled, "Integrating Managed Work Comp Care with Wellness."

Other workshops include:

- employee assistance in the 1990s: a benefit that decreases risk, increases productivity, and builds morale;
- how to start a wellness program on a budget;
- prescription for a drug-free workplace;
- cancer prevention: how to bring cancer screening and prevention programs to the worksite; and
- risk rating—step by step.

Those who register for the conference by **April 20** pay the discounted fee of \$95. The regular registration fee is \$105. For more information, call Shelley Urich, the Trust's director of administration, at (800) 228-7823.

mendations for changes to prevent work-related disease, and to manage programs that could dramatically affect the health of workers.

Prognosis for the '90s and beyond

Both Drs. Schwerha and Green agree that the future looks bright for occupational medicine. Societal and environmental forces will increase the attention paid to this field. According to the National Institute of Medicine, there are five discernible forces pushing in this direction⁸:

- Patient demand for physicians knowledgeable in occupational and environmental services are growing, and consumer power is at an all-time high in the current competitive health care market.

- Regulatory and legal pressures are leading more employers to provide more employee health services.

- Business is cutting back on in-house medical departments.

- The rapidly expanding managed care plans provide new incentives for recognizing disease from occupational and environmental sources.

- Health care financing dictates that hospitals more aggressively market services to the insured, healthy workers rather than to the poor, sick, and elderly. According to a 1993 survey conducted by the American Hospital Association, 46 percent of responding hospitals indicated that they now offer occupational health services.⁹

Dr. Schwerha says physicians have a responsibility to keep up-to-date on the clinical, social, and legal aspects of occupational health. "First and foremost, a physician should be concerned about the welfare of his or her patients," he concludes. "Because most people spend almost a fourth of their daily lives in the workplace, the physician must know what each patient is doing at work and the health risks involved. Without this knowledge, a physician cannot advise or treat the patient adequately when occupational illnesses occur. As a result, the patient suffers." ◊

Where to Find Assistance

American College of Occupational and Environmental Medicine (ACOEM):

Offers a wide variety of Category 1 continuing medical education seminars and material, including a basic curriculum in occupational medicine, a core course in environmental medicine, and a comprehensive reference book, *A Practical Approach to Occupational and Environmental Medicine*, written by Robert J. McCunney, MD, MPH.

(Telephone: 708-228-6850)

Clearinghouse for Occupational Safety and Health Information:

Run by National Institute for Occupational Safety and Health (NIOSH). Provides literature searches and NIOSH publications.

(Telephone: 800-422-6237)

U.S. Occupational Safety and Health Administration (OSHA):

Enforces the Occupational Health and Safety Act, and provides copies of regulatory standards that apply to United States industry.

(Telephone: 202-690-7134)

Toxicology Information Response Centre:

Run by Oak Ridge National Laboratory. Provides answers to questions about toxic compounds and processes. Conducts literature searches and compiles bibliographies.

(Telephone: 615-576-1743)

Canadian Centre for Occupational Health and Safety:

Provides information and conducts literature searches on occupational hazards.

(Telephone: 905-572-4432)

Judy Bucko

The Montgomery County Medical Society presented its Benjamin Rush Award to the Pennsylvania Medical Society Alliance's Immediate Past President, **Judy Bucko**. Also, she

was appointed to the AMA Alliance Legislation Committee for 1995.

Bernard A. Eskin, MD, professor of obstetrics and gynecology, Medical College of Pennsylvania and Hahnemann University, Philadelphia, has authored a new book entitled, *"Midlife Can Wait: How to Stay Young and Healthy After 35."*

Kwaku Ohene-Frempong, MD, director, Comprehensive Sickle Cell Center, Children's Hospital of Philadelphia, has received the National Collegiate Athletic Association's Silver Anniversary Award.

Mukesh A. Patel, MD, Media, was elected a fellow of the American College of Physicians.

The medical staff of Aliquippa Hospital has announced the following appointments: **John Notaro, MD**, president; **Stephen Zernich Jr., MD**, vice president; and **James K. Tatum, MD**, secretary/treasurer.

Albert Einstein Medical Center, Philadelphia, has appointed **Sucha O. Asbell, MD**, chairman, Department of Radiation Oncology.

Kevin Carey, MD, vice president of the board of directors and chief of gastroenterology, Guthrie Clinic, Sayre, was elected secretary/treasurer of the American Group Practice Association.

Charles N. Burns Sr., MD, a urologist, has received an honorary doctorate of science degree from Wilkes University, Wilkes-Barre. Dr. Burns was one of the first members of the Wilkes alumni body to be accepted into medical school.

James H. Herndon, MD, David Silver professor and chairman, Department of Orthopedic Surgery, University of Pittsburgh School of

Medicine, was elected treasurer of the board of directors of the Academy of Orthopedic Surgeons.

Lehigh Valley Hospital has appointed **Herbert Hoover Jr., MD**, as chairman of surgery.

Alexander A. Sapega, MD, assistant professor, Department of Orthopedics Surgery, University of Pennsylvania Medical Center, Philadelphia, was appointed director of the University of Pennsylvania Sports Medicine Center.

Steven A. Silber, MD, was appointed medical director, Benjamin Franklin Clinic, Philadelphia.

Neil J. Berger, DO, chairman, Department of Radiology, St. Joseph's Hospital, Philadelphia, was elected president of the medical staff at St. Joseph's Hospital.

University of Pennsylvania Medical Center has appointed **John R. Stanley, MD**, chairman, Department of Dermatology.

Dr. Corn

Benjamin W. Corn, MD, was appointed vice chairman and associate professor, Department of Radiation Oncology, Thomas Jefferson University, Philadelphia.

Chestnut Hill Hospital, Philadelphia, has appointed **Linda Baker, MD**, chairman, Department of Pediatrics.

The American Osteopathic Board of Radiology (AOBR) has appointed **Mark S. Finkelstein, DO**, to the following: chairman of the ad hoc committee to develop the AOBR examination for certification of added qualifications in pediatric radiology, co-chairman of the ad hoc committee to develop basic standards in fields of interest in pediatric radiology, associate examiner for the AOBR certification of added qualifications in pediatric radiology, and associate examiner for the AOBR oral boards for diagnostic radiology.

Andrew C. Friedman, DO, was named a fellow of the American College of Osteopathic Internists.

Ephrata Community Hospital has appointed **Vincent D. Glielmi, DO**, vice president of medical affairs.

David Rosenthal, DO, was appointed surveyor by the Commission for the Accreditation of Rehabilitation Facilities.

Dr. Burns

Rosalie A. Burns, MD, professor and chair of neurology, Medical College of Pennsylvania and Hahnemann University School of Medicine, Philadelphia, was honored by the Epilepsy

Foundation of Southeastern Pennsylvania with the Founders Award for professional excellence in the field of epilepsy.

Iain F. S. Black, MD, has been appointed executive vice president of medical and academic affairs, St. Christopher's Hospital for Children, Philadelphia, and chairman of pediatrics, Medical College of Pennsylvania and Hahnemann University School of Medicine.

Paul N. Lanken, MD, associate professor of medicine and director of the medical intensive care unit, University of Pennsylvania Medical Center, Philadelphia, has been selected as principal investigator of the regional component of a new nationwide study into the treatment and prevention of adult respiratory distress syndrome.

Neal Flomenberg, MD, has been named director of bone marrow transplants and leukemia/lymphoma programs, Jefferson Cancer Center of Thomas Jefferson University, Philadelphia, and professor of medicine in the university's Division of Neoplastic Diseases.

Laurel S. Lipshutz, MD, director, Hall Mercer Community Mental Health/Mental Retardation Center, Pennsylvania Hospital, Philadelphia, received the 1995 Region III Association for Academic Psychiatry Teaching Award for her significant contributions and commitment to teaching, and her impact on medical students, psychiatric residents, and colleagues.

DRUG CENTER LISTS UPCOMING OFFERINGS

The Society's Center for Professional Drug Education and Information anticipates a very busy month for drug education. Profile review is in full swing, and physician response is encouraging.

In addition, we would like to take this opportunity to remind everyone of the excellent continuing medical education program (CME) planned on prescribing for the minority patient. The program, available free of charge, is being held on June 14, 1995, at the Philadelphia County Medical Society, 2100 Spring Garden Street.

Topics to be covered will include:

- Ethnic and Racial Differences in Response to Certain Pharmaceuticals,
- Appropriate Prescribing for Black and Hispanic Patients, and
- Strategies for Meeting the Non-Compliance Challenge: Handling Financial Barriers and Patient Empowerment.

CME credits (6.75) in Category I will be issued for attendance. For additional information, call the Center at (800) 228-7823.

The Center will also be available at the PaACEP annual meeting, POMA's clinical assembly, the Pennsylvania Medical Society Alliance confluence, and the State Society's Leadership Conference with information on drug cost comparison, drug utilization review, and CME programs. Be sure to visit our display, pick up your packet of educational materials, and

get your name on our mailing list for future updates and educational offerings.

See the article which follows on page 34, "Pharmacologic Initiatives in Black Hypertensives," for more information on minority prescribing.

Reminder:

April is Cancer Awareness Month for the Minority Patient.

Q&A: Drug Utilization

The Center for Professional Drug Education and Information receives inquiries from physicians about drug interactions, side effects, and other drug-utilization issues. In an effort to share this information, those questions and answers deemed to be of general interest will appear under this heading each month. The responses will be prepared by our clinical pharmacist, Brenda Trimmer, RPh, FASCP, and will be based on an abstract of the latest scientific literature that has been developed with input and knowledge of experienced clinicians. If you have a question that you think would be of general interest, please contact the Center at (800) 228-7823.

Q: I have a patient who cannot tolerate sulfasalazine in the treatment of rheumatoid arthritis (RA). Is Pentasa® or Dipentum® an alternative to sulfasalazine in the treatment of RA?

A: Pentasa® or Dipentum® do not appear to be suitable alternatives to sulfasalazine. Sulfasalazine is metabolized into mesalamine and sulfapyridine. It is believed that the sulfapyridine metabolite plays an active role in the treatment of rheumatoid arthritis. Pentasa® (mesalamine) and Dipentum® (osalazine), on the other hand, do not contain sulfapyridine metabolites and have not been shown to be effective in the treatment of RA. The manufacturer of Dipentum® has indicated that it has not pursued its product for the treatment of RA since only approximately two percent of Dipentum® is absorbed.

Your Comments Are Welcome

Building Your Cultural Competency

Frederick C. Foard

Important benefits await physicians who recognize the differing needs of culturally diverse patient populations and build their "cultural competency."

I'm not a physician nor a licensed allied health professional. I've never "laid hands" on a patient. I'm a businessman, and my business is communicating—about "minority health" and about "cultural competency" in the delivery of health care in these United States. At best, I'm a rather well-schooled lay person devoted to a somewhat obscure subject. So why should you bother to read this article? If you had to ask, you've got your answer. Perhaps an even better question is, Why do I bother? The answer to that will come later.

Schools of medicine, nursing, and pharmacy have traditionally taught that the etiology, presentation, evaluation and diagnosis, prognosis, and treatment of disease states differ by age, sometimes by sex, and rarely, if at all, by race. Socioeconomic status, education, genetics, and cultural background have not usually been considered of clinical significance. But the facts belie this. Indeed, these factors are often the most relevant characteristics accompanying a disease state.

So why am I about spreading the word on minority health as if it were somehow unique? It's precisely because the manifestation of disease and the treatment outcome, measured in terms of mortality and quality of life, is deadly different. And why am I a cheerleader for cultural competency? Because cultural incompetency is a factor in the negative differential between the health status of African-Americans, Hispanic-Americans, Native Americans, and some Asian-American groups. According to a federal report going back as far as a decade ago, the result is "excessive mortality" for the nation's minority populations (read: a lot more deaths per year than can be logically justified).

The fact is, with the aforementioned lack of training in our professional schools of health, most practitioners are ignorant in varying degrees about minority health and cultural competency. Yet, some are indignant when one suggests

that minority health care is somehow different.

Once, as the editor of a tabloid on minority health, I received an angry letter from a physician-reader wherein he characterized the very idea of a publication on minority health as "racist." He wrote, "As a physician, all of my patients are treated equally irrespective of their race, color, or creed." Yet, to treat *unequals* equally is an act of misguided equalitarianism at best and a disservice at worst.

For example, hypertension has consistently been shown to occur earlier, more severely, and with worse prognosis in African-Americans than in other Americans. Furthermore, we know that certain antihypertensive medications have relatively lower efficacy in African-Americans. Such facts should translate into earlier and perhaps more frequent screening, more aggressive therapy even at "mild" or "Stage I" levels, and more intense follow-up for patients of this minority.

"Equal treatment," on the other hand, contributes to the outcome that blacks have a hypertension-related mortality rate three to five times higher than that of whites, and also contributes to blacks making up two-thirds or more of the patient census in the average dialysis unit. (For more on hypertension in blacks, see pages 34-38.)

Similarly, Hispanic-Americans are second only to Native Americans in the incidence and ravages of diabetes. They are nearly twice as likely to develop non-insulin dependent diabetes mellitus as whites, develop it at a younger age (one study found a 26 percent incidence among Mexican-Americans aged 26-44 versus only 10 percent in whites of the same age group), and have a two-and-a-half times greater chance of developing such complications as retinopathy. Such evidence warrants more diabetes screening, more patient education, and more intense follow-up in this population.

With the influx of Southeastern Asians in the last three decades, the higher prevalence of hepatitis B has become apparent. Though a physician cannot be faulted for not routinely checking for immunizations for hepatitis B in the majority of patients,

Mr. Foard is president and chief executive officer of Advanced Communications Strategies, Inc., Cherry Hill, New Jersey, a marketing/communications company specializing in professional and consumer health care education. He is also editor and publisher of the Association of Black Cardiologists' Digest of Urban Cardiology, and a contributor to the AMA's 1994 publication, Culturally Competent Health Care for Adolescents. Formerly, he was associated with the National Minority Health Association.

failure to take a different tact for Vietnamese, Laotians, or the Hmong is inexcusable.

Cultural competency

Now, let's turn to the cultural competency issue. Last year, the AMA issued a publication entitled, *Culturally Competent Health Care for Adolescents*. The title is somewhat a misnomer since the lessons on cultural competency are applicable regardless of the patient's age. This monograph defined a person with cultural competency as having five abilities:

- being both *aware* and *accepting* of cultural differences;
- having awareness of one's own culture and how it biases one's beliefs, values, expectations, and practices;
- *understanding* and *appreciating* the differences between one's own culture and that of others;
- having *basic knowledge* about a patient's culture sufficient to recognize when to seek additional knowledge and/or expertise in order to provide effective care; and
- having *adaptive* skills to modify history-taking, treatment modalities, follow-up procedures, and other care activities in ways that best respond to a patient's cultural differences.

In other words, cultural competency is not just a physician's ability to understand or speak another language (including ghetto slang), but encompasses addressing patients' needs within the framework of that patient's health beliefs, religious biases, cultural philosophy, and social customs. Even a practitioner who is of the same racial or ethnic background as a given patient may not share that patient's culture due to generational, regional, or class differences.

Over the next decade, the U.S. population is predicted to change to a point where one out of every three Americans will be of a racial or ethnic minority. Those of you affiliated with managed care systems will be seeing more minority patients as a result of ongoing efforts by the commonwealth to shift Medicaid recipients into managed care arrangements. Clinicians must recognize the diversity in their patient populations, and adapt their behaviors and clinical approaches accordingly.

By improving your "bedside manner"—that is, improving your interpersonal relationship with culturally diverse patient populations—and by building your cultural competency, you can improve diagnostic accuracy, therapeutic compliance, treatment outcomes, and your practice size. And, as an added benefit, you may reduce malpractice risks. ☐

AMA Leader Calls for Cultural Competence in Health Care

AMA President Elect Lonnie R. Bristow, MD, sees a "grim future" for American health care, unless "an increasingly fractionated American public can be sensitized to the need for tolerance, understanding, appreciation, and inclusion of this country's varied and growing minority population."

Dr. Bristow is the first African-American to rise to top leadership of the 148-year-old AMA. His warnings came in remarks at a January conference on health care and cultural diversity sponsored in part by the Hennepin County (Minnesota) Medical Society.

As evidence of some grievous national inequities, Dr. Bristow cited a recent report from the Health Care Financing Administration about "serious disparities" in access to Medicare for African-Americans, poor people, and people living in rural areas. Meanwhile, only four of 100 primary care physicians are African-Americans, four are Hispanic-Americans, 12 are Asian-Americans, and less than one percent are Native Americans.

The good news? "Forty percent of today's medical students are women. Thirty-one percent belong to racial or ethnic minorities," Dr. Bristow says. "But until these young doctors are well established in their practices, we must deal with cultural minorities who view traditional American medicine with varying degrees of skepticism." The danger, he adds, is that these minorities will put off seeking care [and] will settle for inappropriate and ineffective alternatives."

The AMA, through its Advisory Committee on Minority Physicians, has supported the recruitment and retention of minority medical students and examined the special health needs of minority patients.

The future of American health care can be good "because of diversity, not in spite of it," he concludes. With cultural competency and sensitivity among caregivers, "I see a future that goes back to the basics of medicine. A future where we practice medicine one patient at a time [and] see only the human being."

—AMA Electronic Network

"Clinicians must recognize the diversity in their patient populations, and adapt their behaviors and clinical approaches accordingly."

Pharmacologic Initiatives in Black Hypertensives

Elijah Saunders, MD

Despite improvements over the past two decades, management of hypertension in blacks remains a special challenge.

Hypertension is more prevalent in blacks (38 percent) than in non-blacks (29 percent), has an earlier onset, and tends to be more severe and to have more serious consequences.¹⁻⁵ According to data from the Hypertension Detection and Follow-Up Program (HDFP),²⁻⁵ the prevalence of severe hypertension (diastolic blood pressure >115 mm Hg) is five to seven times higher and cardiovascular mortality three to five times higher in blacks than in whites. Higher rates of target-organ damage, including left ventricular hypertrophy (LVH)⁶ and end-stage renal disease,^{7,8} have also been reported in hypertensive blacks.

Why the virulence of hypertension in blacks compared with whites? Various factors may play a role, including the intrinsic pathophysiologic characteristics of hypertension in this group, responsiveness to treatment, and socioeconomic barriers that impede access to proper health care.

Public health efforts to encourage blood pressure screening and referral for treatment have faltered in recent years even though the problem of hypertension in blacks is far from "solved." Hypertension remains a significant cause of cardiovascular morbidity/mortality and therefore demands a renewed commitment to early detection and aggressive intervention.

Such a therapeutic initiative must be aimed at doing more than reducing sphygmomanometer readings. Rather, intervention must ameliorate the "hypertension syndrome"⁹—the complex of hemodynamic, metabolic, and cardiovascular abnormalities that characterize hypertensive disease in so many patients, particularly black patients. To achieve this goal, clinicians managing black hypertensives may need to reconsider how to use antihypertensive agents in these patients.

Certain recommendations recently published in the *Fifth Report of the Joint National Committee on Detection, Evaluation, and Treatment of High Blood Pressure (JNC V)*¹⁰ represent aggressive therapeutic initiatives that may be particularly beneficial in the management of hypertension in blacks. However, others appear to be incompatible with the stated goal of reducing the cardiovascular morbidity/mortality associated with hypertension. This review will examine and comment on JNC V recommendations as they specifically apply to antihypertensive therapy in black patients. First, a brief assessment of the key characteristics of hypertension in blacks provides a useful context for this commentary.

Pathophysiology and environment

Specific hormonal, hemodynamic, and biochemical factors (see Table 1, next page) that may have some genetic basis are frequently associated with hypertension in blacks.¹¹ As a group, blacks tend to have hypertension characterized by diminished activity of neurohormonal systems such as the sympathetic nervous system (SNS) and renin-angiotensin system (RAS), low cardiac output, expanded plasma volume, and increased peripheral resistance. In the past, these factors were considered the foundation for selecting one antihypertensive agent over another for black hyperten-

sives because they were believed to predict responsiveness to a specific agent.

Almost to the exclusion of other agents, diuretics and calcium antagonists have traditionally been used in black hypertensives because they effectively reduce blood pressure via mechanisms that match the pathophysiology of low-renin, salt-sensitive, volume-overloaded hypertension. In contrast, use of the other major classes of antihypertensive drugs—including angiotensin-converting enzyme (ACE) inhibitors and beta blockers—has been limited due to published reports of lower response rates in blacks and subsequent

Dr. Saunders is head of the Hypertension Division and associate professor of medicine, University of Maryland School of Medicine. Both a founder of the Association of Black Cardiologists and a co-founder of the International Society of Hypertension in Blacks, Dr. Saunders has conducted extensive clinical research and published two textbooks on hypertension in blacks.

assumptions that these drugs' mechanisms were not specific to the pathophysiology of hypertension in blacks.

However, many black hypertensives experience good blood pressure control and other cardiovascular benefits with ACE inhibitors or beta blockers, for example, demonstrating the danger in generalizing results from population studies to individual patients. Their response also indicates that the underlying mechanisms of hypertension in blacks and the actions of antihypertensive drugs are not yet fully understood.

Findings that localized RAS activity in tissue plays a pivotal role in hypertension development and progression, independent of circulating RAS activity,¹² suggest that low circulating renin levels may not be an accurate predictor of response to ACE inhibitors. Preliminary evidence also supports the involvement of certain genetic abnormalities in the RAS—e.g., an ACE deletion polymorphism¹³—in hypertension in blacks, which would also diminish the significance of plasma renin among black hypertensives.

Socioeconomic factors contribute to the persistence of hypertension as a major health problem in the black community despite the availability of effective antihypertensive agents. Potentially detrimental eating habits—a socially programmed

taste for excessive sodium and fat, for example, and low intake of potassium-rich foods—may aggravate pathophysiologic factors. High levels of psychosocial stress related to poverty, crime, density of housing, residential mobility, and marital instability have been correlated with elevated blood pressure among black men.¹⁴ And limited access to primary care physicians compounds the problem, resulting not only in lost opportunities for detection and treatment but in lower compliance rates as well.¹⁵

Evidence suggests that hypertensive blacks can achieve similar reductions in blood pressure and cardiovascular disease morbidity and mortality as hypertensive whites when given equal access to appropriate treatment.¹⁶ Therefore, while clinicians need to be familiar with the pathophysiologic and socioeconomic differences of hypertension in black populations compared to white populations, successful management is clearly dependent on instituting and maintaining effective blood pressure control in individual patients.

Disease/complications

Because blacks seem to develop more severe hypertension earlier and remain undiagnosed, untreated, or poorly controlled longer, it stands to reason that they are more likely to suffer the catastrophic con-

“Evidence suggests that hypertensive blacks can achieve similar reductions in blood pressure and cardiovascular disease morbidity and mortality as hypertensive whites when given equal access to appropriate treatment.”

Table 1: Pathophysiologic Characteristics of Hypertension in Blacks

Low cardiac output
Expanded plasma volume
Increased peripheral vascular resistance
Decreased renal blood flow
Increased salt sensitivity
Decreased plasma renin levels
Decreased sympathetic nervous function
Decreased natriuretic vasodilatory kinins and prostaglandins
Increased sodium-potassium ratio
Abnormal sodium-potassium cotransport and sodium-lithium countertransport
Abnormal cellular handling of calcium or magnesium

Publication of this article was arranged by the Center for Professional Drug Education and Information, of the Pennsylvania Medical Society, as part of its educational outreach on the topic of prescribing for minorities. For more information on continuing medical education programs planned on this topic by the Center, see page 31.

The Center is a first-of-its-kind venture in the U.S. created in 1993 when the State Society joined with the Pennsylvania Department of Public Welfare to meet drug utilization review requirements imposed by the Omnibus Budget Reconciliation Act (OBRA) of 1990. Today, the Center offers a variety of educational materials for physicians, including drug cost information charts and pocket cards, information on medications, drug identification for patients, patient-specific dosing guidelines, analysis of drug interactions, and other materials in development.

This article is excerpted with permission from the Association of Black Cardiologists' *Digest of Urban Cardiology* 1(4):17-25, 1994.

Table 2: JNC V Blood Pressure Classification⁹ (>18 years)

	SBP (mm Hg)	DBP (mm Hg)
Normal	<130	<85
High normal	130-139	85-89
Hypertension		
Stage 1	140-159	90-99
Stage 2	160-179	100-109
Stage 3	180-209	110-119
Stage 4	>210	>120

sequences of long-standing hypertension. Black hypertensives have been shown to be at greater risk for target-organ damage, with higher rates of stroke,¹⁷ LVH,^{6,18,19} and renal disease.^{20,21}

Interestingly, cardiovascular and renal disease, marked by conditions such as LVH, microalbuminuria, and elevated serum creatinine which frequently accompany chronic hypertension, may also develop independent of blood pressure in many blacks. In formulating effective therapeutic strategies, therefore, clinicians need to recognize the effects of agents on blood pressure as well as these other markers of disease.

In the general population, LVH is a well-known predictor of cardiovascular disease mortality and morbidity as well as all-cause mortality.²² Increases in left ventricular mass may occur in some black patients even before the development of significant clinical hypertension.^{23,24} According to data from the HDFP study,²⁴ black participants demonstrated early evidence of LVH, as indicated by tall R-waves on electrocardiogram, regardless of blood pressure or treatment status. Moreover, LVH-related reductions in survival in blacks also appear to be independent of the degree of coronary artery disease present.²⁵

Hypertension and diabetes are the most frequent causes of end-stage renal disease (ESRD),²⁶ an extremely costly outcome in clinical and economic terms. Because blacks have a greater prevalence of both hypertension and non-insulin-dependent diabetes, they are particularly

vulnerable to nephropathy. Microalbuminuria, identified as a relatively early indicator of cardiovascular and renal complications, is present in as many as five percent of all patients with Stages 1 and 2 hypertension and increases in prevalence with more severe hypertension.²⁷ Increased serum creatinine is a sign of progressive renal damage that also appears to be intimately related to blood pressure.

However, there is also evidence suggesting that blood pressure reduction alone may not adequately reverse hypertensive or diabetic nephropathy, particularly in black patients.

Among 11,000-plus hypertensives participating in the HDFP study, mean creatinine values taken at trial entry were higher in black men and women than in white men and women for every stratum of hypertension severity.²⁰ Follow-up analyses indicated that serum creatinine concentrations were associated with prognosis, with a five-fold increase in mortality risk between the lowest

and highest creatinine levels.²⁸ At the eight-year follow-up exam, blacks represented three-quarters of those who had a baseline serum creatinine level greater than 1.5 mg/dL and therefore the majority of subjects with excess mortality.

In a smaller study,²¹ the risk of ESRD was shown to be about four times greater in black hypertensives than in white, and hypertensive renal disease was about 18 times greater. This difference in risk may not be corrected even with effective blood pressure control. In their evaluation of

nearly 100 patients with normal baseline serum creatinine levels who received long-term antihypertensive treatment, Rostand et al.²⁹ found that 16 percent of all patients had increased creatinine despite adequate blood pressure reductions. Well-controlled hypertensive blacks were twice as likely as hypertensive whites to have an increase in creatinine.

JNC recommendations

Because hypertension continues to be a significant health threat, greater effort is being made to define optimal treatments for all types of hypertensive patients. The

“Because blacks have a greater prevalence of both hypertension and non-insulin-dependent diabetes, they are particularly vulnerable to nephropathy.”

Fifth Report of the JNC is one example, providing detailed recommendations on the diagnosis and treatment of hypertension. These recommendations are intended to improve outcomes in the broad range of hypertensive patients, but may have both advantages and disadvantages in subgroups such as blacks.

Blood Pressure Classification: In the latest JNC report, hypertension is classified by Stages 1-4 (see Table 2, above), in language similar to that used in other disease states such as cancer, to indicate the severity and progressive nature of the disease.¹⁰ A category of "high normal" blood pressure was introduced in the classification as a warning of the increased risk of future hypertension and nonfatal/fatal cardiovascular events for individuals with these ranges of blood pressures.

Systolic and Diastolic Blood Pressures: Studies of systolic hypertension have recently demonstrated that reductions of SBP to or toward 140 mm Hg conferred significant clinical benefits in elderly hypertensive populations.^{30,31} In response to these findings, the JNC V classification places new emphasis on systolic blood pressure (SBP) in the diagnosis of hypertension by lowering the threshold for Stage 1 hypertension to SBP >140 mm Hg, regardless of whether diastolic blood pressure (DBP) is elevated. When a patient's SBP and DBP fall into different stages, the higher stage should be selected to classify that patient's hypertension.

Evaluation of Overall Cardiovascular Risk: In managing hypertensive patients, the JNC proposes that clinicians reduce SBP and DBP to below 140/90 mm Hg

"while concurrently controlling other modifiable cardiovascular risk factors."¹⁰ Estimations of absolute risk (see Table 3, below) are to be used in determining the most appropriate therapeutic strategies for individual patients, with the ultimate goal of reducing cardiovascular morbidity/mortality.

The committee identified LVH as a powerful, independent risk factor that is an indication for effective blood pressure control. Because of its value as an early marker of cardiovascular and renal risk, microalbuminuria was also added as a sign of target-organ damage. In fact, to protect against declines in renal function, particularly aggressive treatment is advised in hypertensive patients with concomitant renal disease to achieve blood pressure reductions to 130/85 mm Hg if possible.¹⁰ Such an approach may be especially appropriate for black hypertensives, who demonstrate an excess incidence of LVH and renal disease.

Lifestyle Modifications: According to JNC V, an essential first step in reducing elevated blood pressure and overall cardiovascular risk is to encourage changes in patients' lifestyles, including:

- weight reduction;
- moderation of alcohol intake;
- exercise;
- smoking cessation; and
- dietary restriction of sodium, fat, and cholesterol.

These modifications may be particularly necessary in blacks because they are more likely to be overweight, smokers, and salt sensitive. However, compliance is complicated by socioeconomic factors

"Socio-economic factors contribute to the persistence of hypertension as a major health problem in the black community despite the availability of effective antihypertensive agents."

Table 3: Absolute Cardiovascular Risk Factors¹

• Blood pressure elevation • Target organ damage	
Cardiac	Coronary artery disease; LVH; left ventricular dysfunction or cardiac failure
Cerebrovascular	TIA, stroke
Peripheral vascular	Absence of >1 major pulses in vascular extremities, aneurysm
Renal	Serum creatinine >130 μ mol/L (1.5 mg/dL); proteinuria >1; microalbuminuria
Retinopathy	Hemorrhage or exudates
• Dyslipidemia • Smoking • Diabetes • Physical inactivity • Obesity	

such as targeting of black communities by cigarette advertisers; long-standing, culturally dictated dietary habits; and the expense of nutritionally sound food.

Initiating Pharmacologic Therapy: If SBP and/or DBP remain elevated (i.e., >140/90 mm Hg) despite concerted efforts to adopt lifestyle modifications, those with Stage 1 or Stage 2 hypertension should begin therapy with a single antihypertensive agent. The absence of concomitant diseases and/or target-organ damage—rare among black hypertensives—may allow clinicians to delay initiating drug therapy in some patients with relatively small elevations, but they should attempt to initiate therapy before target-organ damage develops. The presence of such damage or other cardiovascular risk factors calls for prompt administration of antihypertensive drug therapy.

Drug Selection: Agents that are recognized as being appropriate first-line monotherapy in Stage 1 and 2 hypertension are diuretics, beta blockers, angiotensin converting-enzyme (ACE) inhibitors, calcium antagonists, and alpha blockers. In a move that has stirred considerable controversy, however, the JNC named diuretics and beta blockers as “preferred” agents for initial drug therapy, since these are the agents used in controlled clinical trials to demonstrate that reduction of blood pressure can significantly reduce stroke and other cardiovascular endpoints.¹⁰ In adopting this purist approach, however, the committee appears to have overlooked strong

evidence that calcium antagonists and ACE inhibitors produce comparable blood pressure reductions while having favorable—or at least not unfavorable—effects on other aspects of the hypertension syndrome, which will likely result in equal or greater benefits in terms of cardiovascular morbidity/mortality in many hypertensive patients.

Follow-Up Care: If antihypertensive therapy is initiated and the patient fails to respond after an adequate trial of one to three months, the JNC cites three options aimed at controlling blood pressure:

- 1) increasing the dosage of the initial drug toward maximum tolerated levels;
- 2) replacing the initial drug with a drug from another class; or
- 3) adding a second drug to initial drug therapy (followed by withdrawal of first drug if combination is effective).

Patients with more severe hypertension (i.e., >110/180 mm Hg) often require changes in therapy at shorter intervals. Although these changes in therapy are often effective, they may be problematic for some patients. For example, increasing drug doses and adding a second drug can increase the risk of side effects, increase the cost of therapy, and reduce compliance.

Compliance: JNC V also acknowledges the critical role that compliance plays in controlling blood pressure and improving hypertension-related outcomes.¹⁰ To promote adherence to therapy, the new report stipulates that reduction of blood pressure should be accomplished “by the least intrusive means possible” and includes comprehensive outlines of compliance-enhancing strategies.

Special Populations/Conditions: In making therapeutic decisions, clinicians need to be aware of not only blood pressure severity, but also other characteristics that might affect the patient’s cardiovascular risk, including concomitant diseases and target-organ damage. The age, sex, and race of the patients are also considered to be significant as they may influence the course and consequences of the disease. It is recommended, therefore, that treatment be individualized as much as possible based on the patient’s specific profile. C

Project 3000 by 2000

The Association of American Medical Colleges (AAMC) in 1991 launched *Project 3000 by 2000: Health Professions Partnership Initiative*—a program to increase the number of underrepresented minority students entering U.S. medical schools each year. The goal is 3,000 students by the year 2000.

The problem of minority underrepresentation in medicine is by no means an isolated problem, according to program literature. Instead, it is the result of pervasive and systemic educational disadvantage in minority communities around the country. For African-Americans, who represent about 12.1 percent of the U.S. population, the percentage of black physicians remains stable at four percent; for Hispanics, who represent about nine percent of the U.S. population, that number has remained at less than five percent.

The initiative, cosponsored by the Robert Wood Johnson Foundation, seeks to enhance the academic preparation of minority students and nurture their interest in health careers, thereby increasing minority participation in all health professions. The effort will require partnerships between medical and other health professions schools, and local school systems and colleges.

Matching grants of up to \$350,000 over a five-year period are available to up to 10 academic health centers to develop and implement such partnerships. An additional round of grants will be announced in 1996.

For more information about the program, and for application materials, contact Timothy Ready, PhD, deputy director of the project, at: AAMC, 2450 N Street NW, Washington, DC 20037; phone: (202) 828-0584; fax: (202) 828-1125.

Final deadline for letters of intent to apply is rapidly approaching; call for further information. Deadline for receipt of applications is June 1, 1995.

Detailed information on therapeutic implications for black hypertensives is available from the Pennsylvania Medical Society’s Center for Professional Drug Education and Information, (800) 228-7823 or (717) 558-7750.

New Therapeutic Agents Marketed in 1994

This is the first in a series of articles overviewing new drugs approved and marketed in the U.S. in 1994.

Daniel A. Hussar, PhD

In 1994, the Food and Drug Administration (FDA) approved 22 new molecular entities (NMEs), 18 of which are for therapeutic use and four of which are diagnostic agents. Nine of the NMEs for therapeutic use, as well as a new biological agent intended for therapeutic use, were both approved and marketed in the United States in 1994. In addition, 10 other NMEs and a biological agent for therapeutic use that the FDA approved before 1994 (most in late 1993) were marketed during the year. Thus, a total of 21 therapeutic agents reached the U.S. market for the first time in 1994, representing a continuation of the decline from the record number of 31 new therapeutic agents which were marketed in 1991.

This review of the therapeutic agents first marketed in 1994 considers their most important properties. When additional information is needed, more comprehensive references and the product literature should be consulted.

ANTIVIRAL AGENTS

Famciclovir (Famvir-SmithKline Beecham) is a prodrug of the antiviral agent penciclovir, a guanosine analog with a chemical structure similar to that of acyclovir (Zovirax). Following oral administration, famciclovir is well absorbed and is rapidly converted to penciclovir in the intestinal wall and liver. It exhibits inhibitory activity against varicella zoster virus (VZV) and is indicated for the management of acute herpes zoster (shingles), joining acyclovir as the only drugs approved for the treatment of this disorder. Herpes zoster is caused by VZV, the same virus that causes chickenpox. Following chickenpox, VZV exists in a dormant stage in the body but in many individuals is reactivated later in life to cause herpes zoster.

In clinical studies famciclovir significantly reduced the duration of viral shedding, accelerated the healing of lesions, and shortened the duration of postherpetic neuralgia. In a study in which famciclovir (administered three times a day) was compared with acyclovir (administered five times a day), the two drugs had comparable times in achieving lesion healing and times to loss of acute pain. The longer duration of action and less frequent dosing with famciclovir should facilitate patient compliance and represents an advantage for the new agent.

Like acyclovir, famciclovir is well tolerated, and the incidence and severity of adverse reactions with famciclovir was comparable to that for individuals in the placebo groups. The adverse reactions most often associated with the use of famciclovir were headache (23 percent versus 18 percent in the placebo groups), nausea (13 percent versus 12 percent), diarrhea (eight percent versus five percent), and fatigue (four percent versus three percent).

The recommended dosage of famciclovir is 500 mg every eight hours for seven days. Treatment should be initiated promptly as soon as herpes zoster is diagnosed. Famciclovir tablets are supplied in a 500-mg potency.

Stavudine (Zerit-Bristol-Myers Squibb), formerly called d4T, is the fourth drug to be approved for the treatment of human im-

muno deficiency virus (HIV) infection, joining zidovudine (Retrovir), didanosine (Videx), and zalcitabine (Hivid). The new drug is phosphorylated by cellular kinases to stavudine triphosphate which exerts antiviral activity by inhibiting HIV reverse transcriptase and inhibiting viral DNA synthesis.

Stavudine is indicated for the treatment of adults with advanced HIV infection who are intolerant of approved therapies with proven clinical benefit or who have experienced significant clinical or immunologic deterioration while receiving these therapies or for whom such therapies are contraindicated. Because zidovudine has been demonstrated to prolong survival in patients with advanced HIV disease, it should continue to be viewed as the preferred agent for initiating treatment of HIV infection.

The major clinical toxicity of stavudine is peripheral neuropathy, experienced by 15 to 21 percent of the patients in the controlled trials. This reaction has also been commonly reported with the use of didanosine and zalcitabine, and is usually characterized by numbness, tingling, or pain in the feet or hands. Individuals with a history of peripheral neuropathy, or who are taking other medications known to cause or exacerbate this reaction, are at increased risk of such a response. Patients should be advised to report such symptoms promptly. The neuropathy may resolve if treatment is withdrawn, although, in some cases, symptoms may worsen temporarily following discontinuation of therapy. If symptoms resolve completely, resumption of treatment may be considered at a reduced dose.

Pancreatitis was reported in one percent of the patients in the controlled clinical trials and was associated with 14 deaths, five of which were attributed to drug toxicity.

Like didanosine, stavudine is administered every 12 hours, whereas zidovudine and zalcitabine are usually administered three times a day. The recommended starting dosage is 40 mg twice a day for patients weighing 60 kg or more, and 30 mg twice a day for patients weighing less than 60 kg. Stavudine capsules are supplied in 15-, 20-, 30-, and 40-mg potencies.

AGENT FOR *PNEUMOCYSTIS CARINII* PNEUMONIA

Pneumocystis carinii pneumonia (PCP) is the most common opportunistic infection associated with the acquired immunodeficiency syndrome (AIDS) occurring in upwards of 80 percent of AIDS patients. The anti-infective agents that have labeled indications for the treatment of infections caused by this protozoal organism include trimethoprim/sulfamethoxazole (TMP/SMX, Bactrim, Septra) which is usually considered the treatment of choice, pentamidine (Pentam 300), and atovaquone (Mepron).

Despite parenteral therapy with TMP/SMX or pentamidine, complications of PCP are the cause of death of many AIDS patients. Also of concern are the drug-induced adverse reactions which occur in more than 50 percent of patients with PCP and which are serious enough in many patients to require a change in therapy.

Trimetrexate glucuronate (NeuTrexin-US Bioscience) is a structural analog of folic acid that exhibits a folic acid antagonist (antifolate) action. Trimetrexate shares certain properties with methotrexate and was originally developed as an anticancer agent. However, unlike methotrexate, which is hydrophilic, trimetrexate is highly lipophilic and can enter both human cells and certain microbial cells (e.g., *Pneumocystis carinii*) through passive diffusion. Trimetrexate is a potent competitive inhibitor of dihydrofolate reductase (DHFR), a key enzyme in the folate metabolic pathway. Folate metabolism is necessary for continued cell viability in certain microorganisms such as *Pneumocystis carinii*, and in mammals.

Trimetrexate with concurrent leucovorin administration (leucovorin protection) is indicated as an alternative therapy for the treatment of moderate-to-severe *Pneumocystis carinii* pneumonia in immunocompromised patients, including patients with AIDS, who are intolerant of, or are refractory to, TMP/SMX therapy or for whom TMP/SMX is contraindicated. Trimetrexate may be less effective than TMP/SMX in some patients and is considered an alternative treatment; however, it represents an important addition to the small group of agents that are active against *Pneumocystis carinii*.

Like methotrexate, trimetrexate can cause life-threatening adverse reactions. It is essential that leucovorin be used concurrently with trimetrexate to reduce the risk of bone marrow suppression, oral and gastrointestinal mucosal ulceration, and renal and hepatic dysfunction. Leucovorin is readily transported into mammalian cells by an active carrier-mediated process. However, because the *Pneumocystis carinii* organism lacks this,

transport system, leucovorin is prevented from entering the organism. Therefore, at the concentrations achieved with therapeutic doses of trimetrexate plus leucovorin, the selective transport of trimetrexate, but not leucovorin, into the *Pneumocystis carinii* organism allows the concurrent administration of leucovorin to protect normal host cells from the cytotoxicity of trimetrexate without blocking its inhibition of *Pneumocystis carinii*.

Hematologic toxicity was the principal dose-limiting side effect of trimetrexate/leucovorin treatment. It is recommended that blood tests be performed at least twice a week to assess absolute neutrophil counts and platelets, as well as renal function (serum creatinine) and hepatic function (AST, ALT, alkaline phosphatase). Because zidovudine (AZT, Retrovir) may cause hematologic toxicity, it is recommended that it be discontinued during the period of trimetrexate therapy so that the full therapeutic dose of trimetrexate can be used. Trimetrexate may cause fetal harm if administered during pregnancy. It is classified in Pregnancy Category D, and women of childbearing potential should be advised to avoid becoming pregnant during the period of treatment with the drug.

Trimetrexate is administered once daily by intravenous infusion over 60-90 minutes. Leucovorin must be administered every six hours, either orally or intravenously, during the period of treatment with trimetrexate and for 72 hours past the last dose of trimetrexate. The recommended course of therapy is 21 days of trimetrexate and 24 days of leucovorin.

Trimetrexate glucuronate in an amount equivalent to 25 mg of trimetrexate is supplied as a sterile lyophilized powder in 5 ml, single-dose vials. Trimetrexate must not be reconstituted or mixed with solutions containing either chloride ion or leucovorin because precipitation occurs instantly. The intravenous line must be flushed thoroughly with at least 10 ml of five percent Dextrose Injection before and after administering trimetrexate.

DIURETIC

Torsemide (Demadex-Boehringer Mannheim) is the fourth loop diuretic to be marketed in the United States, joining furosemide (Lasix), bumetanide (Bumex), and ethacrynic acid (Edecrin). The loop diuretics act mainly in the thick, ascending limb of the loop of Henle, where approximately 25 percent of the total sodium and chloride reabsorption occurs.

Torsemide is indicated for the treatment of edema associated with congestive heart failure, renal disease, or hepatic disease. It is administered orally, or by intravenous injection when a rapid onset of diuresis is desired or when oral administration is not feasible. Torsemide is also indicated for the treatment of hypertension and may be used alone or in combination with other antihypertensive agents. The indications for the new agent are the same as those for furosemide, whereas the labeled indications for bumetanide and ethacrynic acid do not include hypertension.

The adverse reactions most frequently reported with the use of torsemide include excessive urination (seven percent—reported as an adverse event when the drug was used in the treatment of hypertension), headache

(seven percent), dizziness (three percent), and rhinitis (three percent); however, of these and the other reactions that occurred in more than one percent of patients, only excessive urination occurred significantly more frequently in patients treated with torsemide than in individuals receiving placebo. Torsemide is a pyridine-sulfonylurea derivative, and its use is contraindicated in patients with a known hypersensitivity to any sulfonylurea derivative. It is also contraindicated in patients who are anuric.

Like other diuretics, torsemide may cause electrolyte imbalance, and periodic monitoring of serum potassium and other electrolytes is advised. Torsemide should be used with particular caution in patients with hepatic disease with cirrhosis and ascites, because sudden alterations of fluid and electrolyte balance may precipitate hepatic coma. In these patients, diuresis is best initiated in a hospital.

Both torsemide and salicylates compete for secretion by renal tubules, and patients receiving high doses of a salicylate may experience salicylate toxicity when the two drugs are administered concurrently. Although the concomitant use of torsemide and lithium has not been studied, other diuretics are known to reduce the renal clearance of lithium and increase the risk of lithium toxicity. The use of torsemide is best avoided in patients treated with lithium but, if both agents are considered necessary, therapy should be monitored very closely.

Because of the high bioavailability of torsemide, the oral and intravenous doses are therapeutically equivalent, so patients may be switched from and to the intravenous formulation with no change in dose. When given intravenously, the injection should be administered slowly over a period of two minutes.

Torsemide tablets are supplied in 5-, 10-, 20-, and 100-mg potencies. Few medications are available in as wide a range of potencies as torsemide tablets, and extra caution is advised in assuring the clarity of prescriptions/orders for this formulation (e.g., there is a potential for confusion between the 10- and 100-mg potencies). The formulation for intravenous injection is supplied in ampuls containing 20 mg (2 ml) and 50 mg (5 ml) of torsemide.

AGENT FOR HYPERCHOLESTEROLEMIA

Fluvastatin sodium (Lescol-Sandoz; Marion Merrell Dow) is the fourth drug in a class of lipid-lowering compounds known as the 3-hydroxy-3-methylglutaryl coenzyme A (HMG-CoA) reductase inhibitors, joining lovastatin (Mevacor), pravastatin (Pravachol), and simvastatin (Zocor). Like pravastatin, it is administered in its active form, whereas lovastatin and simvastatin are inactive prodrugs that are converted to their active forms following administration. The new drug is indicated as an adjunct to diet in the treatment of elevated total cholesterol (total-C) and low-density lipoprotein cholesterol (LDL-C) in patients with primary hypercholesterolemia (Type IIa and IIb) whose response to dietary restriction of saturated fat and cholesterol and other non-pharmacological measures has not been adequate.

The HMG-CoA reductase inhibitors reduce total-C and LDL-C concentrations, moderately reduce triglycerides, and increase high-density lipoprotein cholesterol (HDL-C). The

action of fluvastatin on LDL-C (a 24-percent reduction with the maximum recommended dose) is less pronounced than that observed with the other three agents (usually a 30- to 40-percent reduction of LDL-C). Whether this difference is clinically important is the subject of claims and counterclaims for the competing products.

With the use of any of the HMG-CoA reductase inhibitors, it will be necessary in some patients to add a second drug, such as a bile acid-binding resin, to obtain the desired cholesterol-lowering action. There is a concern that the concurrent use of a HMG-CoA reductase inhibitor and niacin might increase the risk of skeletal muscle reactions (e.g., myopathy). However, myopathy was not observed in a clinical study in 74 patients who were treated with both fluvastatin and niacin.

The precautions identified for fluvastatin parallel those recognized for the other agents in this class. Fluvastatin is contraindicated in patients with active liver disease or unexplained, persistent elevations in serum transaminases, and should be used with caution in patients who have a history of liver disease or heavy alcohol ingestion. It is recommended that liver function tests be performed before the initiation of treatment, at six and 12 weeks after initiation of therapy or elevation in dose, and periodically thereafter (e.g., semiannually). If transaminase values (i.e., ALT or AST) equal or exceed three times the upper limit of normal and persist, it is recommended that treatment be discontinued.

Because cholesterol and other products of cholesterol biosynthesis are essential components of fetal development, there is concern that HMG-CoA reductase inhibitors may cause fetal harm if administered during pregnancy. Fluvastatin is classified in Pregnancy Category X and is contraindicated in pregnant women, as well as in nursing mothers.

The use of the HMG-CoA reductase inhibitors has been associated with the occurrence of adverse reactions involving skeletal muscles, including myalgia, myopathy, and, rarely, rhabdomyolysis. In the clinical studies with fluvastatin, myopathy was reported in one patient and was related to physical exertion. There were no reports of rhabdomyolysis. Patients should be advised to report promptly unexplained muscle pain, tenderness, or weakness, particularly if accompanied by malaise or fever. The experience with other HMG-CoA reductase inhibitors suggests that there is an increased risk of skeletal muscle reactions when certain other therapeutic agents (e.g., cyclosporine [Sandimmune], erythromycin, gemfibrozil [Lopid]) are used concurrently. Data regarding the concurrent use of fluvastatin and these other agents are limited. Because the use of the fibrates (gemfibrozil, clofibrate [Atromid-S]) alone has occasionally been associated with the occurrence of myopathy, the combined use of a HMG-CoA reductase inhibitor with either of these agents should generally be avoided.

The cholesterol-lowering effect of the HMG-CoA reductase inhibitors may be enhanced by the concomitant use of a bile acid-binding resin (cholestyramine [Questran] or colestipol [Colestid]). However, these latter agents (that are not absorbed) are known to form complexes with certain other medications in the gastrointestinal tract that could reduce their absorption and effectiveness.

When fluvastatin is used concurrently with a resin, it is best to administer it at least four hours after the resin.

Like pravastatin and simvastatin, fluvastatin is administered once a day (at bedtime) and without regard to meals; in contrast, lovastatin is administered with the evening meal and, in some patients, in divided doses (with a meal). The recommended starting dose of fluvastatin for most patients is 20 mg once daily at bedtime. Fluvastatin sodium is supplied in capsules in an amount equivalent to 20 and 40 mg of fluvastatin.

ANTIFIBRINOLYTIC AGENT

Patients undergoing cardiac surgery with extracorporeal circulation by a heart-lung machine (cardiopulmonary bypass [CPB]) experience activation of the fibrinolytic system (resulting in the release of the protease plasmin) and the kinin system (resulting in the release of factors such as kallikrein). These changes often lead to excessive bleeding which may be severe enough to require multiple blood transfusions. *Aprotinin* (Trasylol-Miles) is a natural protease inhibitor obtained from bovine lung that exhibits a variety of effects on the coagulation system, including inhibition of plasmin and kallikrein. Its net effect is to inhibit fibrinolysis and decrease bleeding.

Aprotinin is indicated for prophylactic use to reduce perioperative blood loss and the need for blood transfusion in patients undergoing cardiopulmonary bypass in the course of repeat coronary artery bypass graft (CABG) surgery. It is also indicated in selected cases of primary CABG surgery where the risk of bleeding is especially high (impaired hemostasis, e.g., presence of aspirin or other coagulopathy), or where transfusion is unavailable (e.g., patients with rare blood types) or unacceptable (e.g., patients who are Jehovah's Witnesses). In clinical studies the use of aprotinin significantly reduced the number of patients requiring any donor blood and, when donor blood or blood products were required, the patients treated with aprotinin needed significantly less. The new drug represents an important addition to the small group of antifibrinolytic agents that also includes aminocaproic acid (Amicar) and tranexamic acid (Cyklokapron).

The selective indication for aprotinin in high-risk (rather than all) primary CABG patients is based on the concerns regarding the risk of renal dysfunction and the risk of anaphylaxis (should a second procedure be needed). Anaphylactic reactions have been reported in less than 0.5 percent of patients in the post-marketing experience outside the United States. All patients treated with aprotinin should first receive a test dose to assess the potential for allergic reactions. Patients who experience any allergic reaction to the test dose should not receive further administration of the drug. Even after the uneventful administration of the small test dose, or without previous exposure to aprotinin, the full therapeutic dose may cause anaphylaxis.

Aprotinin is administered intravenously through a central line, and other drugs should not be administered using the same line because of the likelihood of incompatibility. The drug is supplied in 100- and 200-ml vials containing one million and two million Kallikrein

Inhibitor Units (KIU), respectively. One million units of aprotinin represents 140 mg of the drug (i.e., 1.4 mg or 10,000 KIU per ml). A 1 ml (10,000 KIU) test dose of aprotinin should be administered intravenously at least 10 minutes before the loading dose.

ANTIDEPRESSANT

Venlafaxine hydrochloride (Effexor-Wyeth-Ayerst) is indicated for the treatment of depression and is chemically unrelated to other available antidepressants. It is extensively metabolized in the liver, and one of its metabolites, O-desmethylvenlafaxine (ODV), is also pharmacologically active. Like the tricyclic antidepressants (e.g., imipramine [Tofranil]), venlafaxine and ODV inhibit the neuronal reuptake of both serotonin and norepinephrine. However, the tricyclics also have an affinity for muscarinic, histaminergic, and adrenergic receptors that is thought to be responsible for the anticholinergic, sedative, and cardiovascular adverse effects, respectively, of these agents. Venlafaxine has little or no affinity for these receptors, and its adverse reaction profile is most similar to that of the selective serotonin reuptake inhibitor (SSRI) antidepressants (fluoxetine [Prozac], paroxetine [Paxil], and sertraline [Zoloft]).

The most commonly observed adverse reactions associated with the use of venlafaxine and not seen at an equivalent incidence among placebo-treated patients include nervous system effects (e.g., somnolence [23 percent], dizziness [19 percent], insomnia [18 percent]), gastrointestinal effects (e.g., nausea [37 percent], constipation [15 percent], anorexia [11 percent]), and, in men, abnormal ejaculation (12 percent) and impotence (six percent). Patients should be advised to avoid alcohol while taking venlafaxine. It is recommended that venlafaxine not be used in combination with a monoamine oxidase inhibitor (MAOI) or within 14 days of discontinuing treatment with a MAOI. There should be at least a seven-day interval after stopping venlafaxine before starting a MAOI.

Venlafaxine therapy has been associated with dose-dependent and sustained increases in blood pressure (seven percent incidence in patients receiving 201-300 mg/day), a reaction not likely to occur with other antidepressants. It is recommended that blood pressure be monitored regularly and, for patients who do experience a sustained increase in blood pressure, the dosage should be reduced or the drug discontinued.

The recommended initial dosage of venlafaxine is 75 mg/day, administered in two or three divided doses, taken with food for the purpose of reducing the occurrence of gastrointestinal side effects. Venlafaxine hydrochloride tablets are supplied containing the equivalent of 25, 37.5, 50, 75, and 100 mg of venlafaxine.

ANTIPSYCHOTIC AGENT

About two million individuals in the United States suffer from schizophrenia, and an estimated 15 to 30 percent are resistant to therapy with agents such as the phenothiazines (e.g., chlorpromazine [Thorazine]), haloperidol (Haldol), and clozapine (Clozaril). *Risperidone* (Risperdal-Janssen; SmithKline

Beecham) is indicated for the management of the manifestations of psychotic disorders and is structurally different from the other antipsychotic agents. It is extensively metabolized in the liver to a major active metabolite, 9-hydroxyrisperidone, that is the predominant circulating form of the drug and is considered to be equi-effective with the parent compound.

Risperidone appears to be at least as effective as haloperidol, and the new agent is less likely to cause extrapyramidal reactions. Although there is a need to conduct additional studies in which risperidone is compared with other antipsychotic agents, the new drug represents an important addition to this class of drugs and, for some patients, may be more effective and/or better tolerated than haloperidol and the phenothiazines. There are insufficient data to compare the effectiveness of risperidone with clozapine, an agent that has been effective in some schizophrenic patients who have not responded adequately to other antipsychotic drugs. Unlike clozapine, risperidone is not associated with a risk of agranulocytosis, and the results of comparative studies are awaited with the hope that the new agent may be effective in patients who would otherwise be candidates for clozapine treatment.

Risperidone may cause orthostatic hypotension associated with dizziness, tachycardia, and, in some patients, syncope (0.2 percent), especially during the initial dosetitation period. Patients should be warned of this possibility, and the initial dose should not exceed 1 mg twice daily to reduce the risk. Caution should also be exercised in patients taking other centrally acting drugs, and patients should be advised to avoid the consumption of alcoholic beverages.

Risperidone should be administered on a twice-daily schedule, generally beginning with 1 mg twice daily with increases in increments of 1 mg twice daily on the second and third days, as tolerated, to a target dose of 3 mg twice daily by the third day. The maximum antipsychotic effect is usually seen in the range of 4 to 6 mg/day. An initial dose of 0.5 mg twice daily is recommended for patients who are elderly or debilitated, have severe renal or hepatic impairment, or who are either predisposed to hypotension or for whom hypotension would pose a risk. Dosage increases in these patients should be in increments of 0.5 mg twice daily. Risperidone tablets are supplied in 1-, 2-, 3-, and 4-mg potencies.

NEUROMUSCULAR BLOCKING AGENT

Rocuronium bromide (Zemuron-Organon) is a nondepolarizing neuromuscular blocking agent that is structurally related to vecuronium (Norcuron) and pancuronium (Pavulon). It is indicated for inpatients and outpatients as an adjunct to general anesthesia to facilitate both rapid sequence and routine tracheal intubation, and to provide skeletal muscle relaxation during surgery or mechanical ventilation.

Rocuronium exhibits a rapid to intermediate onset of action depending on the dose. Among the nondepolarizing neuromuscular blockers, the new agent has the fastest onset of action with excellent to good intubation conditions often attained within 60 seconds of intravenous administration. This onset of

action is similar to or slightly longer than that of succinylcholine (Anectine) and about twice as rapid as that of vecuronium, atracurium (Tracrium), and mivacurium (Mivacron). Thus, rocuronium could be considered as an alternative to succinylcholine in situations in which rapid endotracheal intubation is necessary. However, succinylcholine has a short duration of action (usually less than 10 minutes), whereas rocuronium has an intermediate duration of action (usually at least 30 minutes) that is similar to that of vecuronium and atracurium.

Rocuronium is administered intravenously, and the dosage must be individualized. It is supplied in vials containing 50 mg of the drug in 5 ml and should be stored under refrigeration. Rocuronium solution has an acidic pH and should not be mixed with alkaline solutions (e.g., barbiturate solutions) in the same syringe or administered simultaneously during intravenous infusion through the same needle.

ANTIEPILEPTIC AGENT

Gabapentin (Neurontin-Parke-Davis) is indicated as adjunctive ("add-on") therapy in the treatment of partial seizures with and without secondary generalization in patients over 12 years of age with epilepsy. The agents that have been prescribed most often, either alone

or in combination, for the treatment of partial seizures include carbamazepine (Tegretol), phenytoin (Dilantin), and valproate (Depakene, Depakote), with phenobarbital and primidone (Mysoline) being used as alternatives. An estimated 500,000 patients in the United States experience disorders that are not satisfactorily controlled with antiepileptic medications, and the availability of gabapentin offers the hope of increasing the effectiveness and/or tolerability of antiepileptic drug regimens for many of these individuals. Gabapentin is not presently indicated as monotherapy or in pediatric patients, but it is likely that the indications for the new agent will expand as additional studies are completed.

The most commonly experienced adverse reactions with the use of gabapentin (in combination with other antiepileptic drugs) are central nervous system related and include somnolence (19 percent), dizziness (17 percent), ataxia (13 percent), nystagmus (eight percent), and tremor (seven percent). Patients should be advised of the possibility of these reactions and cautioned not to drive or operate machinery until they have gained sufficient experience with the use of the drug to determine whether it affects their mental and/or motor performance adversely.

Gabapentin does not interact with the other antiepileptic drugs with which it is used in combination, and this represents an impor-

tant advantage over the aforementioned agents that have been implicated in such interactions, and that require closer monitoring of the therapy and dosage adjustments. The bioavailability of gabapentin has been reported to be reduced by about 20 percent by the administration of Maalox, and the antiepileptic drug should be taken at least two hours following the administration of Maalox or a similar antacid.

The usual dosage of gabapentin is 900 to 1800 mg/day given in divided doses three times a day. Titration to an effective dose can be accomplished rapidly, giving 300 mg on the first day, 300 mg twice a day on the second day, and 300 mg three times a day on the third day. When treatment is initiated, the first dose may be administered at bedtime to minimize potential adverse effects (e.g., somnolence, dizziness, fatigue). The maximum time between doses in the three-times-daily schedule should not exceed 12 hours. If gabapentin is to be discontinued, and/or an alternate anticonvulsant is added to the therapy, this should be done gradually over a minimum of one week. Gabapentin capsules are supplied in 100-, 300-, and 400-mg potencies.

Dr. Hussar is Remington professor of pharmacy, Philadelphia College of Pharmacy and Science, Philadelphia.

New Therapeutic Agents Marketed in 1994—Part I*

Generic Name	Trade Name	Manufacturer	Therapeutic Classification	Dosage Form	FDA Classification**
Aprotinin†	Trasylol	Miles	Antifibrinolytic agent	Parenteral	1-P,V
Famciclovir	Famvir	SmithKline Beecham	Antiviral agent	Tablet	1-S
Fluvastatin sodium†	Lescol	Sandoz; Marion Merrell Dow	Agent for hypercholesterolemia	Capsule	1-S
Gabapentin†	Neurontin	Parke-Davis	Antiepileptic agent	Capsule	1-P
Risperidone†	Risperdal	Janssen; SmithKline Beecham	Antipsychotic agent	Tablet	1-P
Rocuronium bromide	Zemuron	Organon	Neuromuscular blocking agent	Parenteral	1-S
Stavudine	Zerit	Bristol-Myers Squibb	Antiviral agent	Capsule	1-P,AA,E,H
Torsemide†	Demadex	Boehringer Mannheim	Diuretic	Tablet, Parenteral	1-S
Trimetrexate glucuronate†	NeuTrexin	U.S. Bioscience	Agent for <i>Pneumocystis carinii</i> pneumonia	Parenteral	1-P,AA,V,E
Venlafaxine hydrochloride†	Effexor	Wyeth-Ayerst	Antidepressant	Tablet	1-S

* Part II will appear next month in *PENNSYLVANIA MEDICINE*.

** Food and Drug Administration classification of new drugs:

1 = new molecular entity

P = priority review, therapeutic gain

S = standard review, substantially equivalent

AA = a treatment for AIDS and/or its complications

E = a drug used to treat life-threatening or severely debilitating illnesses

H = accelerated approval

V = designated orphan drug

† Approved by the FDA before 1994, but not marketed until 1994.

A Vision for Tomorrow

"You have not done enough, you have never done enough, so long as it is still possible that you have something to contribute."

Dag Hammarskjöld

THE EDUCATIONAL
& SCIENTIFIC TRUST
of the Pennsylvania Medical Society

In 1994, The Educational and Scientific Trust reached an important milestone... our 40th anniversary. We celebrate this anniversary because we are proud of the Trust's accomplishments over the last four decades. But, as this world statesman observes in the quote above, an organization cannot rest on its laurels. There is still much work to be done as we follow our vision for a better tomorrow.

Since its beginning in 1954, the Trust has been a unique, visionary institution. Although the Trust's philosophy has not changed over the years, our focus has. This was strongly evident in 1994 as the Trust moved toward becoming a more mission-driven philanthropy. Last year, we fine-tuned our mission statement and set program priorities based on this mission.

Public health was in the forefront of Trust activities during 1994. Building the Keystones of Public Health coalition and the steering committee to guide the program were the focus of our efforts last year. Our goal with Keystones is to pull together the various groups working in public health and to jointly identify and address Pennsylvania's most critical public health care needs.

Last year was a very successful year financially for the Trust. Our aggressive fund-raising efforts raised over \$600,000 for the Trust and the Physicians' Health Programs. Our Trustees became involved and personally solicited Pennsylvania Medical Society board members for gifts. The Society's leaders responded with generous contributions, thus reaffirming their personal support of the Trust. Although we are unable to personally thank every contributor, we extend our heartfelt thanks to all who have supported the Trust. We hope you will continue to share our vision for the future of medicine.

1994 was also an exciting year of expansion and outreach. Not only did our services grow, but we made extensive efforts to establish viable relationships with our donors, other health care organizations, and community groups working in public health. Our outreach included getting more physicians involved in Trust activities. During 1995, we will continue to personally ask leaders in health care to volunteer their time and expertise to help the Trust meet its future challenges.

We are building our vision for tomorrow on the legacy of the past 40 years. In charting our course for the future, the Trust's leadership and staff affirm our commitment to our mission, to Pennsylvania's physicians, and, above all, to the public we serve.

Honorary and Memorial Gifts

*H*onorary and memorial gifts create a lasting remembrance of special individuals while helping others. Making such a contribution is a rewarding way to recognize a friend or relative's accomplishments and successes.

Gifts in Honor of:

Dr. R. William Alexander
 Judith M. Bucko
 Dr. Betty Cottle
 LeRoy C. Erickson
 Dr. George E. Farrar, Jr., FACP
 Dr. Henry Fetterman
 Dr. George R. Fisher, III
 Greg Gable
 Dr. James Harger
 Dr. John H. Hobart
 Dr. Juan Kraljevic
 Dr. Matthew Marshall, Jr.
 Arthur J. Nobile, Jr.
 Dr. Herbert C. Perlman
 Elfrieda M. Persic
 Dr. Penelope Ziegler

Special Thanks

In 1994, the Trust received a generous donation from the estate of the late Dr. Augustus S. Kech to support the Trust's student loan program and the Medical

Benevolence Fund. Dr. Kech served as Pennsylvania Medical Society president and trustee and president of the Blair County Medical Society.

Notes to Financial Statements

Note 1: The financial statements shown in this report are unaudited. Audited statements are being prepared and will be available upon request in April.

Note 2: Current unrestricted funds are those funds used to maintain normal operations of the Trust (including projects and programs) and do not require prior approval for their use. Current restricted funds are funds held in reserve by the Trust not designated for a specific purpose, but cannot be used without the permission of the Board of Trustees (or others for whom the fund is maintained). Endowment funds are gifts to

the Trust. Revenue generated from the gifts is designated for a specific purpose.

Note 3: Investments are recorded at cost. In 1994, market value is \$1,890,485; in 1993, market value was \$2,392,051.

Note 4—Interfund Transfers: Interfund transfers are transfers of funds within the Trust, having no net effect on the fund balance of the organization. However, these transfers must be noted on the financial statements.

1994 in Retrospect

Based on its success in 1994, the Keystone Peer Review Organization is looking for even better days ahead.

They say you can't tell where you're going unless you know where you are and where you have been. So, I think that every now and then it helps to look back at the previous year to view your successes and failures as an organization in order to have a better grasp on what the future may hold.

The toughest thing about this is that many of us have a tendency to remember the good things and mentally dismiss the bad. Sometimes it's because once the problems have been resolved, they don't seem to be as important as when they were discovered. Besides, the only way we find the time to reflect on the past is when we're not facing any current problems. That may be why I look at 1994 as a very good year. Sure, we had those occasional minor crisis situations, but I really can't remember any serious problems that had lasting effects.

Perhaps the highlight of the year was receiving the news that our joint venture organization, Dyn/KePRO, was a successful bidder for one of the two Clinical Data Abstraction Center contracts. This was quite important for the future of the organization, mainly because it is providing national exposure and it is well known that we were up against some real heavyweight contenders for the contract.

During '94, KePRO continued to be profitable, and we were able to pay two dividends to our parent company, in addition to making a charitable contribution to the Society's Educational and Scientific Trust. Our review contract with Florida Medicaid continued to increase in scope and has grown to be a large percentage of our total business.

Although the amount of Medicare review that we perform has been significantly reduced under our

contract with HCFA, we have been able to fill a little of the void with review of workers' compensation cases. An organizational restructuring was successfully completed in November, and based on advice from the consulting organization we employed earlier in the year, a Business Development Department was established for the purpose of further increasing our product lines and non-government business.

Also in 1994 we started seeing some results from our Health Care Quality Improvement Program cooperative projects—and they are exciting. The cooperation we received from hospital medical staffs and administration, which is a necessary ingredient, was excellent. As more cooperative projects are completed in 1995, I'm sure we will see an even greater potential for improving the delivery of health care in the state.

Probably the most important program which KePRO operates is Community Outreach. When we consider why there is a PRO program, the answer has to be the Medicare beneficiaries. We exist because we are trying to improve the quality of care they receive and also to preserve the integrity of the Medicare Trust Fund for their continued future coverage.

I don't believe another PRO in the nation can say they have a better outreach program than KePRO. During the past year, an even greater number of beneficiaries were reached—through presentations to senior citizen groups, through the mail, and by calls to our "hotline"—than in previous years. Our very active Consumer Advisory Committee provided ongoing advice on how to maintain and increase the effectiveness of the outreach program.

Well, that kind of sums up the KePRO year of 1994. So far, 1995 shows signs of being as good or even better. ○

"I don't believe another PRO in the nation can say they have a better outreach program than KePRO."

Dr. Harrop is president of the Keystone Peer Review Organization.

COUNTY NEWS

THANKS TO BERKS STUDENTS, JOE CAMEL ONLY A MIRAGE

The Berks County Medical Society (BCMS) in January recognized third graders at Reading-area elementary schools for their successful efforts to have Joe Camel removed from a billboard near one of the schools.

The students received a letter from BCMS President John C. Moser, MD, congratulating them on their efforts; each also received an apple, described by Dr. Moser as "nature's toothbrush."

Third graders at Richmond Elementary School noticed the Joe Camel billboard near their school after learning about the dangers of smoking and that such advertisements were believed to have contributed to growing numbers of teenage smokers. They also learned that national advertising associations restrict cigarette advertising on billboards near schools.

The Richmond students contacted the billboard company to complain, and their peers at Andrew Maier Elementary School in Blandon joined in by drawing posters to suggest other topics for the billboard.

Billboard company officials say the placement of the billboard was an "oversight." In a letter to the children, they admitted their mistake, and assured them the billboard would be changed and not used for tobacco or alcohol ads in the future. The Joe Camel ad has since been replaced with a "wholesome" message about milk, courtesy of a local grocer.

State Society President John H. Hobart, MD, also wrote a congratulatory letter to the students on behalf of the Pennsylvania Medical Society, and each child was sent a Youth Against Tobacco "smoking animals" poster and Youth Against Tobacco book bag tags.

DR. ZEMEL IS NEW PRESIDENT IN BUCKS COUNTY

Walter George Zemel, MD, a Grand View Hospital otolaryngologist, has been inducted as president of the Bucks County Medical Society for 1995.

Dr. Zemel earned his undergraduate degree from Rutgers University, New Brunswick, New Jersey, and his medical degree from

Jefferson Medical College of Thomas Jefferson University, Philadelphia. He completed his internship at Philadelphia General Hospital, his surgical residency at York Hospital, and his residency in head and neck

medicine and surgery at Thomas Jefferson University Hospital.

A resident of Ambler, Dr. Zemel is in private practice in Sellersville. He has been a member of the Grand View medical staff since 1977.

PHC4 National Symposium on Outcomes and Quality Assessment: State of the Art and Future Directions

Harrisburg Hilton & Towers, May 31-June 2, 1995

The Pennsylvania Health Care Cost Containment Council (PHC4) has designed a three-day symposium for professionals who use health care data and information. Symposium sessions are designed to provide an educational forum tailored to meet the specific needs of individuals with a particular background of knowledge. PHC4 has assembled a top-notch faculty of health care data experts to address this symposium, which includes three plenary sessions and numerous concurrent workshops. This symposium will feature:

- ◇ an examination of systems which focus on specific clinical areas;
- ◇ examples of outcome measurement tools and quality assessment systems; and
- ◇ initiatives undertaken in Pennsylvania and nationwide to use information as a resource to manage health care costs and enhance quality.

Who should attend?

Business coalitions and employers; consumer organizations; federal, state, and local government agencies; health care consultants; health data organizations; health information management agencies; health insurance companies; health policy analysts; health services researchers; hospital management and administrators; labor organizations; legal professionals; managed care organizations; physicians/physician groups; quality assurance professionals; and software and hardware vendors.

SPECIALTIES' NEWS

OTOLARYNGOLOGISTS PLAN JUNE SCIENTIFIC CONFERENCE

Physicians are invited to attend the annual scientific meeting of the Pennsylvania Academy of Otolaryngology—Head and Neck Surgery to be held June 15-17, 1995, at Toftrees Resort & Conference Center, State College.

Highlighting the program will be guest of honor Max L. Ronis, MD, professor and chairman of otorhinology, Temple University Health Sciences Center, Philadelphia.

Educational sessions will focus on otology, neurology, and cranial base surgery. Experts in these disciplines will explore what's new and answer clinical questions.

A multidisciplinary panel will discuss the many otolaryngologic aspects of human communications. "How-I-Do-It" sessions by well-known otolaryngologists will also be featured, along with a hands-on workshop on office laser surgery.

Academy President Ernest L. McKenna Jr., MD, Philadelphia, will preside. Phillip K. Pellitteri, DO, Danville, is in charge of the program. Attendees will receive 10 continuing medical education credits.

For further information, call Al Walter at the academy, (610) 775-3298.

Preliminary Call to the 1995 Annual Meeting of the House of Delegates

The House of Delegates of the Pennsylvania Medical Society will convene its annual meeting at the Hershey Lodge and Convention Center, Hershey, on Friday, October 27, 1995. The second session will convene Saturday, October 28, 1995, and the third session Sunday, October 29, 1995. Details regarding the starting times of all three sessions will appear in the Official Call in the August 1995 issue of PENNSYLVANIA MEDICINE.

All proposed amendments to the bylaws must be submitted to the office of the secretary of this Society on or before June 27, 1995. Such amendments may be proposed upon the written petition of 15 active or associate members of the Society, or by the Committee on Bylaws. Resolutions to be considered by the House may be submitted in writing to the secretary by a delegate acting in his or her own behalf or for the component medical society or specialty society he or she represents. If received prior to September 27, 1995, resolutions will be published in the *Official Reports Book*.

CORRECTION

On pages 15 and 54 of the February 1995 issue of PENNSYLVANIA MEDICINE, the newly installed secretary of the Allegheny County Medical Society should have been listed as David S. Zorub, MD.

Avoiding the Avalanche of "Essential" Reading

David Woods

Trying to keep up with medicine's giant strides becomes, almost daily it seems, an ever more daunting task. While the term "information explosion" has already been relegated to the ranks of cliché, the issue it describes is still very much with us—there are twice as many biomedical journals as there were 15 years ago. And still only the same number of hours in a day. But as a journalist and, for that matter, as an occasional patient, I have to take the optimistic view that physicians will find a way to avoid the avalanche of "essential" reading.

Such optimism may be well-founded: Book publishers show no sign of being about to leap in despair from high places; general and professional magazines are for the most part thriving...and talk about the demise of print and its replacement by electronic media is as premature as were the predictions of radio's death at the hands of television.

In a practically unreadable chapter on "Reading" in his book, *The Rustle of Language*, the brilliant but thoroughly abstruse sociologist and lexicologist Roland Barthes does allow a couple of clear thoughts on the subject to emerge. The first is that the infinity of available reading material creates a jarring juxtaposition with our sense of duty about coming to grips with it; the second is that there's no "natural" or "wild" reading—it must be structured. Pertinence is all, he concludes.

For many of us, time seems to be the most pressing issue in trying to plan a reading program. The average adult spends 52 minutes a day reading, and this figure apparently includes all forms of reading from the morning corn flakes packet to the bedtime novel.

Yet, average adults don't put in a 60-hour work week, nor are they generally in a position in which failure to keep up with advances in their professional knowledge could have such far reaching consequences. As Sir William Osler put it: "It is astonishing with how little reading a doc-

tor can practice medicine, but it is not astonishing how badly he may do it."

Is speed-reading the answer? For some people it may be. I've always thought of it as rather like bolting a good meal in five minutes—probably nutritionally correct, but not very satisfying. In any case, it's not the mindless devouring of words that counts so much as remembering what you've read.

Perhaps a better solution, if reading is going to be more than a chore, a duty, is to presort the mountain of material that threatens to overwhelm your desk, and turn it into a manageable molehill. One way to do this is to make full use of abstracts and contents pages in medical and other publications, and to highlight promising titles and headlines. No periodical can involve all of its readers all of the time, but most try to make it easy to select the information you need. Notice how *Time*, *Newsweek* and even the rather staid *Economist* have all in recent times provided two- or three-page synopses of what's inside.

Of course, you have to know what you need. And this isn't always easy because education, which taught us *how* to read, has not necessarily taught us how to judge what's worth reading and persevering with. Of all the needs a book has, said Anthony Trollope, the chief need is that it be readable. Or, to put it more mundanely, the art of reading is to skip judiciously.

Actually, that's one of the advantages of print over the kaleidoscope of electronic alternatives for acquiring information and knowledge: It's geared to the intellectual agility of the user, it's *truly* portable and, for physicians, it can be "dipped into" between patients—or between hospital floors. It's user friendly. Reading—even "essential" reading—can be a simple and rewarding pleasure.

All it needs to attain that reward is discipline, discernment—knowing what not to read—and allocating realistic amounts of time. That way, you'll stand a good chance of avoiding that avalanche of "must" reading. ◊

Editor's note: This article originally appeared as a guest editorial in the newsletter, "The Physician's Advisory."

Mr. Woods, former editor and publisher of the Canadian Medical Association Journal, is president of Healthcare Media International, Inc., Philadelphia, publishers of Medical Practice Communicator and International Digest of Healthcare Management.

SURGEONS: COULD YOU USE AN EXTRA \$10,000?

If you're a resident in surgery, the Army Reserve will pay you a yearly stipend which could total in excess of \$10,000 in the Army Reserve's Specialized Training

Assistance Program (STRAP).

You will have opportunities to continue your education and attend conferences, and we will be flexible about scheduling the time you serve. Your

immediate commitment could be as little as two weeks a year, with a small added obligation later on.

Get a maximum amount of money for a minimum amount of service. Find out more by contacting an Army Reserve Medical Counselor. Just call:

MAJ Dave Parker
1-800-759-5462

Editor

PENNSYLVANIA MEDICINE
777 East Park Drive
P.O. Box 8820
Harrisburg, PA 17105-8820

In 1787, Thomas Jefferson wrote, "Without health there is no happiness. And attention to health, then, should take the place of every other object." The great majority of Americans regard health care as a basic human need. However, while many consider our health care system the best in the world, it is not evenly distributed and is considered the costliest in the world.

Health care costs in the U.S. have been increasing at an alarming rate. In 1993, total costs reached \$900 billion, consuming 14 percent of our gross domestic product (GDP). For 1994, costs reached just less than a trillion dollars, consuming 15 percent of our GDP. If not brought under control, run-away costs could reach \$1.5 trillion by the year 2000, consuming 20 percent of the GDP.

These soaring health care statistics, coupled with 15 percent of our population lacking health care insurance, stimulated President Clinton to present to Congress his Health Security Act of 1993. Our 103rd Congress also took upon itself to pursue myriad ways to solve this cost and access dilemma. As we all know, all of these energetic endeavors came to naught.

The private sector has responded to strong pressures from business and industry to better control the ever-rising costs of health care premiums. This mandate from business and industry acted as a catalyst, with an explosive effect on managed care organizations which had been slowly evolving for the past decade.

Of the several varieties of managed care organizations, the best known and most dominant is the health maintenance organization (HMO). There are about 550 of these in existence in the U.S., with about 57 million enrollees at present and growing at the rate of about 10 percent per year. Medical economists predict that by the year 2000, 80 percent of health care will be under the auspices of managed care organizations.

According to recent reports, the HMOs are doing a fantastic job of being cost ef-

fective. Their financial performance has been so remarkable that they are now sitting on huge hordes of cash. The *Wall Street Journal* (December 21, 1994) has said that about nine of the largest publicly traded HMOs each have accumulated at least a billion or more in cash that they have not as yet decided what to do with.

Health industry analysts look upon these hordes of cash as far beyond what HMOs need to meet insurance industry requirements. One of these billion-dollar-rich HMOs had enough cash on hand in 1993 to pay its president a salary of \$10 million, plus a bonus and stock options.

Managed care organizations are serving a useful purpose in streamlining and restructuring our health care system. The HMOs are achieving these savings by obtaining discounted rates from providers such as physicians and hospitals, and also by reducing medical services to enrollees. The nagging and very important question is, Where and when will these cost-cutting measures affect the quality of care to patients?

Thus far, there are no fail-safe quality control measures in place to assure patients that cost cutting has not jeopardized the quality of care they receive or should be receiving. Yes, HMOs are issuing their own "report cards," lauding their quality assurance programs. A private organization called the National Committee of Quality Assurance, for a fee, will measure the quality of medical care an HMO is rendering its enrollees and award an accreditation certificate.

But should there not be a comprehensive national governmental agency to oversee quality of health care, akin to the Food and Drug Administration?

Our health care system has many attributes that make it the most outstanding in the world. It is said: "If it ain't broken, it can still be improved." We all look to our 104th Congress for improvement in safeguarding our health care. ☐

"Better prescribing through education."

POWERFUL PARTNERSHIPS.

Stability, strength
and synergy
stand the test of time.

Almost twenty years ago,
such a foundation was laid
by medical professionals
to build protection through your own
medical liability insurance company.

With your support, we have grown
to become the insurance carrier
of choice for physicians and surgeons,
as well as their hospitals,
throughout New Jersey and Pennsylvania.

Today, change is everywhere, and stability,
strength and synergy have never been so valuable.

But they are not enough.
To succeed today, you need the added power
of new insurance products, financial services,
and consulting services.

MIIX has broadened its foundation and
introduced these membership enhancements
to help you meet the challenge of change.

Call us for more details: 1-800-234-MIIX.

We develop powerful partnerships.

14 PPHP Founder Talks of Medicine's Future

Shortly after the State Society's board voted to support the goals of PPHP, which aims to be Pennsylvania's first physician-owned managed care organization, we caught up with the organization's founder, Gary C. Brown, MD, of Wyndmoor. In this interview, Dr. Brown discusses the philosophy, structure, and expectations of the organization.

“This is unbelievable.

Thirty minutes into our first meeting, it was obvious who was running the show, and he wasn't a doctor. He had

an agenda that wasn't anything close to mine. Sure, when they sold me the medical liability policy, they bragged about having physicians on their board. They told me to expect a fair review by my peers if there was ever a problem. Then came the malpractice suit. I'm really afraid I might lose this one, and not because of a bad medical decision. I wish now that I had protected my reputation and signed with PMSLIC. PMSLIC is doctor owned, doctor run. With PMSLIC, any claims brought against me would have been reviewed by physicians like me — physicians with a vested interest in the reputation of the

medical community — a reputation we all need to maintain, even safeguard. That would have made all the difference in the world to me. Because now, I'm really scared.”

SOCIETY SEEKING COST-EFFECTIVE SOLUTION TO CAT FUND SHORTAGE:

Medical Professional Liability Catastrophe Loss Fund (CAT Fund) payouts are expected to exceed receipts in 1995, meaning there is a strong possibility of an emergency surcharge in fall 1995 and a higher 1996 surcharge. The State Society is meeting with the Hospital Association of Pennsylvania, the Pennsylvania Trial Lawyers, and the state insurance commissioner to pursue a cost-effective solution for physicians. Look for future updates from the Society.

SENATE TABLES VOTE ON PAIN-AND-SUFFERING CAP: The U.S. Senate on May 2 tabled an amendment to limit awards for non-economic damages in medical malpractice cases. Introduced by Senator Jon Kyl (R-AZ), the amendment proposes a \$500,000 cap on pain-and-suffering awards—two times the amount passed by the U.S. House last month. The good news is passage of a separate amendment, introduced by Senator Mitch McConnell (R-KY), which contains several provisions supported by the federation, including: limits on lawyers' contingency fees, modification of the collateral source rule, periodic payments of future damages over \$100,000, assurances that each party is only liable for his or her fair share of non-economic damages, a cap on punitive damages of \$250,000 or twice the compensatory damages, and strong federal preemption language. At press time, final passage of the full legal reform bill was pending.

LEGISLATION WOULD EXEMPT OFFICE LABS FROM CLIA COMPLIANCE:

A new bill in Washington seeks to exempt physician office labs from compliance with the Clinical Laboratory Improvement Amendments (CLIA) of 1988. The only exception would be labs that perform Pap smears. The Health Care Financing Administration (HCFA) defends CLIA as vital quality safeguards, but physicians oppose the amendments citing bureaucratic overkill. HR 1386 has moved to the House Commerce Committee for review; hearings are expected this summer.

AMA, HCFA ACCEPTING COMMENTS ON MICROSCOPY RULE: HCFA has issued a final rule with comment in the April 24, 1995, *Federal Register*, which expands the types of providers authorized to perform "physician performed microscopy" tests. Included are: physicians, dentists, nurse practitioners, nurse midwives, and PAs. NOT included are emergency personnel, RNs, LPNs, and medical assistants. The AMA, preparing written comments for HCFA, encourages physician input; call the AMA at (202) 789-7414 by June 9. Or, respond directly to HCFA by June 23.

PITTSBURGH SURGEON CONFIRMED AS HEALTH SECRETARY: The state Senate on May 2 confirmed Peter J. Jannetta, MD, an internationally known surgeon from Pittsburgh, as Pennsylvania's new secretary of health. A Society member since 1972, Dr. Jannetta is chairman of the Department of Neurological Surgery at the University of Pittsburgh School of Medicine. He will serve without compensation and recuse himself from decisions or transactions involving the university.

YORK PO ENROLLMENT FAR EXCEEDS EXPECTATIONS: The York County Physician Organization (YCPO), which launched its membership drive for shareholders in March, has enrolled more than 250 members, 85 of which are primary care physicians. These numbers far exceed YCPO's goal of enrolling 100 total members and 50 primary care physicians. For more on the emerging health care marketplace in the state, see page 40.

CHANGE, REFORM THEMES OF LEADERSHIP CONFERENCE: At press time, the Society was wrapping up its annual Leadership Conference, which drew nearly 300 attendees to the Harrisburg Hilton and Towers on May 2-3. This year's theme was, "Coping with Kaleidoscopic Change." Look for full coverage next month in PENNSYLVANIA MEDICINE.

CHICKEN POX VACCINE AVAILABLE AS OF MAY 1: Merck & Company on May 1 began shipping the nation's first chicken pox vaccine to physicians. Approved by the FDA last month, Varivax is believed to be up to 90 percent effective at preventing the disease. It sells for \$39 per dose.

From Scotland to Managed Care

We had bonnie blue skies as our train headed swiftly northward from Edinburgh, Scotland, to Inverness, on this pleasant journey, my first time overseas. Now, I'm seated at a table by the window in our timeshare cabin in Carr-Bridge, penning this editorial. It's a gray, rainy day; not much given to "touristing," but more suited to quiet reflection; a perfect time for writing my thoughts—a blend of travel impressions and editorial duty—for the publication going to press across the way in Pennsylvania.

My first impression is that too much quiet reflection, however, can easily lead to boredom. Efforts to relieve that have no doubt been partially responsible for the huge malt whisky distillation industry here—which no doubt also compounds the already serious alcohol abuse problems in Scotland. But when the weather is cold, and the wind raw and wet, it's easy to reason that one needs a nip or two to thicken the blood and lift the spirit.

I've also observed that, regardless of the fact that this is the home of one of the medical profession's most widely respected international publications, *Lancet*, the English people seem much less concerned about healthy living than we in the states. Rich sauces are commonly served with meats and fish; deep frying is very popular; potatoes are a staple.

We Americans found that skipping lunch after a hearty English breakfast was wise, for pub lunches are also heavy and filling. Afternoon tea can range from tea only to a spread of all manner of sweets, pastries, and even sandwiches and side dishes. One has to be attentive to one's intake, for it's easy to get caught up in the gluttony.

We in the U.S. are convinced that we live in one of the most stressful places on earth, but in London I saw the typical rat race behavior common in the states. People run to catch the Underground (subway), even though the next train will be along in min-

John W. Mills, MD
Medical Editor

utes. All London taxi drivers must have hypertension from the way they maneuver their cabs through narrow streets; and eating on the run seems the norm.

Finally, the stressful side of business travel may be more pronounced for our English brethren, for with such a small country, it's only a matter of hours to foreign shores. We were fortunate to be taken through Wales by a National Railway Historical Society member who had recently retired. He relayed his hypertensive history en route, and I have little doubt his illness was caused by the stresses of foreign travel at a moment's notice to all parts of the globe. He now relaxes with his trains and occasional railroad trips.

Trying to assemble a theme from these disconnected impressions of traveling through a foreign land is a lot like the process I often go through trying to pull one cohesive theme from all the erupting changes we try to cover in each issue of this publication. Sometimes one can; sometimes one can't.

Maybe that's the point: Right now we physicians are travelers in a strange land—the land of managed care—observing it all, taking note, shaking our heads, but merely passing through. We know what ought to be done for everyone's best health, but we feel left with the role of observant tourists rather than that of leading citizens.

This issue of PENNSYLVANIA MEDICINE contains tools to help change that role. Dr. Gary Brown discusses his initiative to create the commonwealth's first physician-led managed care entity on page 14. The State Society's new "Quality Alert Form" is published on page 19. And who among us understands all the regulations regarding confidentiality of patient records? Take charge of patient records with advice from State Society counsel on page 24.

The gray afternoon is duller now, and I've come full circle from Scotch to managed care. I'll retire to a glass of sherry, savoring the thought of my week abroad and hoping my travel reflections have brought some light to troubles brewing far away. ○

free PRACTICE MANAGEMENT SOFTWARE

OFFER
EXTENDED

Medibase, Inc. a leader in Practice Management Software and the developer of the Medibase 5.06 practice management program is expanding. Medibase (a six year old practice management software company from New Jersey) is expanding into Pennsylvania.

As a Pennsylvania promotion we are offering the first **750** callers our complete practice management software *free*.

Includes electronic transfer of Medicare claims direct to Medicare without a transaction charge.

FREE medical management software: Regularly sold for \$1,495.00

"Medicare carriers throughout the nation are moving toward the exclusive use of the standard Electronic Data Interchange (EDI) format by July 1, 1996. In the Medicare Electronic Services area we have been actively involved in the development and implementation of the American National Standards Institute (ANSI) electronic data set.

(Source: Medicare Report-Xact Medicare Services-Pennsylvania Blue Shield, September, 1994. p.4).

The purpose...is to provide a common electronic format for all medical insurance claims filing.

Mr. David Solomon of Medibase, Inc. stated 'we are certain the new ANSI format for electronic billing will greatly improve our clients cash flow with only a modest investment on their part'."

There is a non-refundable \$7.95 Shipping and handling charge.

Please have your credit card ready: Visa, Mastercard, Amex and Discover accepted. Please mail checks or money orders to Medibase, Inc.

Requirements: 286 Computer or higher, MS-DOS 3.1 or higher, hard drive, 640 KB memory. Electronic transfer requires a modem and communication software. Full working package. Optional annual maintenance and support as low as \$150.00 per year.

Keeping an Eye on Managed Care Policy

John H. Hobart, MD

At the time I assumed the office of president, and many times since then, I have repeated in one form or another an invitation that I repeat here now: "Keep in touch." This is not mere courtesy on my part. It is a sincere plea for good, substantial information about the issues you are encountering in your day-to-day practice of medicine.

I am pleased to report that many of you do in fact keep in touch—if not directly, then through your Society trustees and council chairs, your county medical society leaders, your hospital medical staff representatives, and State Society staff. Your calls and letters are critical in helping us adjust our priorities and, if necessary, redirect staff and financial resources to address your most pressing concerns.

But, as this month's primary election reminds us, "some" is not as good as "all." The greater the participation, the better chance we have that our government will identify and serve the real needs of all its citizens.

Your State Society is committed to addressing the concerns that will have the greatest impact on our profession. We pursue data from a wide range of sources. But nothing can take the place of personal contact. If we could count on receiving feedback from every one of our members, the information would be more accurate, more finely tuned, and ultimately more instructive about the nature of the issues we need to address.

I want to call your attention to a major initiative of our State Society that begins in this issue. It is the collection of real-life examples of inappropriate managed care practices and policies that interfere with your ability to exercise sound medical judgment.

Let me try to emphasize the importance of this effort by highlighting some information from a recent "Market Trends" report, which the AMA gleans from a variety of sources.

- Last year, for-profit managed care companies announced or completed 43

mergers or acquisitions, more than double the number in the previous year.

- Health Systems International, which recently acquired Connecticut's MD Health Plan, has agreed to a merger with California's Wellpoint Health Networks. The merger, now pending regulatory approval, would create that state's largest publicly traded HMO. In late March, Health Systems was also reported to be negotiating with Graduate Health System's Greater Atlantic HMO.

- A major pharmaceutical company has developed what it calls a "disease management unit" for hospitals and managed care organizations to determine patient health risks and optimal treatment options.

- A survey of about 200 fourth-year medical students revealed that most had no preference about working in a managed care or non-managed care environment, and that two-thirds would prefer to be employed.

The Pennsylvania Medical Society is not opposed to managed care. But we are deeply concerned about protecting our patients in a managed care environment.

Many of us have been in situations where a managed care policy has proven troubling and even worked against our patients' best interests. When we talk to each other about such problems, we are preaching to the choir.

I have already made a couple of appearances in the State Capitol to present testimony on legislation pertaining to insurance issues, and there are several more on the calendar. When we talk to legislators or regulators or the public, we are often in need of more of the kind of examples of managed care policies that would be convincing to a lay audience.

The foundation of the Society's comprehensive membership-driven process is grassroots feedback. The Quality Alert Form on page 19 will make it easy for you to provide the examples we need to protect our profession and our patients. I sincerely urge you to take advantage of this form to document cases of managed care policy interference in your practice. ○

DOCTORS MAKE BETTER JUDGES.

At The P-I-E Mutual, doctors rule. They sit on managing boards that consider new applicants. They form committees that review the merits of claims. Who knows better? And who cares more about controlling costs than people who themselves are paying premiums? Which helps explain why we can offer such attractive discounts to loss-free members. And how we've attracted more than 18,000 doctors, and become one of the largest medical professional liability monoline insurance companies in America.

MEDICAL CONTRIBUTIONS SOUGHT FOR EL SALVADOR

Several years ago, during the Civil War in El Salvador, a group of Central Pennsylvania churches began Project Via Crucis to help Salvadoran churches provide services for war refugees and the poor. The project has emphasized economic aid projects which facilitate self-sufficiency. These have included providing a small herd of milk cows, equipping a carpentry vocational school, donating money to buy books for the Lutheran University Library, and selling crafts produced by small Salvadoran craft groups. Delegations from Central Pennsylvania churches or other sister churches in the United States visit El Salvador several times a year to carry donations, educate our citizens regarding third-world needs, and provide the support and protection of a continuing outside presence.

When we learned that far more children died of treatable disease than war-related injuries, we also began contributing to the salaries of a part-time physician and a nursing assistant at a small clinic. The clinic provides primary care for minor injuries, infections, dehydration, diarrhea, malnutrition, parasites, respiratory ailments, and pregnancies. Patients receive care free or, if they can afford to pay, at a nominal cost.

The medical professionals working at the clinic are frequently limited by the lack of diagnostic tools and medical supplies. They often face the frustration of prescribing medications, which they know their patients cannot afford to purchase. They would like to be able to perform blood tests and other simple diagnostic procedures onsite rather than referring patients to hospitals or more expensive clinics.

I am writing in the hope that readers can help by providing supplies, medications, and used or new equipment. The most pressing current needs at our clinic and its sister clinics are: otoscope, blood chemistry machine, coultter, equipment for minor surgery and prenatal care, multivitamins, antiparasite medications, bronchodilators, acetaminophen, ulcer medications, antihistamines, expectorants, lamp, bandages and medications for minor wounds,

scissors, ampicillin, and rehydration kits.

Please send donations to:
Project Via Crucis
Christ Chapel
Box 427

Gettysburg College
Gettysburg, PA 17325

Or phone me at (717) 730-3770 during the day or 238-9700 after 5:30 p.m. We also invite readers to join our annual delegation to El Salvador,

tentatively scheduled for early January 1996.

Thank you for your assistance.

\$30,000 BONUS OFFERED TO HEALTH CARE PROFESSIONALS

If you are a board-certified physician or a candidate for board certification in one of the following specialties, you may qualify for a bonus of up to \$30,000 in the Army Reserve.

Anesthesiology • General Surgery • Thoracic Surgery
Pediatric Surgery • Orthopedic Surgery
Colon-Rectal Surgery • Vascular Surgery • Neurosurgery

A test program is being conducted which offers a bonus to eligible physicians who reside in certain geographic areas (Pennsylvania, West Virginia, Ohio, Michigan, Illinois, Indiana, Wisconsin, Minnesota and Iowa). You would receive a \$10,000 bonus for each year you serve as an Army Reserve physician—for a maximum of three years.

You may serve near your home, at times convenient for you, or at Army medical facilities in the United States and abroad. There are also opportunities to attend conferences and participate in special training programs, such as the Advanced Trauma Life Support Course.

To learn more about the Army Reserve and the Bonus Test Program, call one of our experienced Medical Personnel Counselors:

Call MAJ Dave Parker

ARMY RESERVE. BE ALL YOU CAN BE.®

Our annual reunion demonstrates what makes The James so special - our dedication to caring for your patients. You see, The Arthur G. James Cancer Hospital and Research Institute has a focused mission. To help people who have cancer and their families. So if you ever need to refer a cancer patient, you can be sure our primary interest is their good care.

The James is a research and treatment facility dedicated solely to fighting cancer. And everything about The James is geared toward that goal. We are one of only 27 Comprehensive Cancer Centers in the country, as designated by the

that can provide your cancer patients with the very best care available, the most advanced treatments and a profound level of compassion. We can also provide you with any treatment and referral information you need via the OSU ConsultLine, 1-800-824-8236.

This service can give you access to our cancer physicians from 8 a.m. to 6 p.m.

WHAT'S SO SPECIAL ABOUT A CANCER HOSPITAL THAT ORGANIZES A PATIENT REUNION EVERY YEAR?

National Cancer Institute. We are the only freestanding cancer hospital in the midwest. And assembled at The James is a group of the world's finest researchers and cancer physicians who continually broaden our knowledge and raise the standards of cancer care.

That is what makes The James a premier cancer facility. A place

weekdays, and 24 hours a day, seven days a week, if an emergency should come up.

There are many reasons The James is so special. Here are just a few. But every year at our reunion, there are about 1,200 more.

The Arthur G. James Cancer Hospital and Research Institute, Columbus, Ohio

Liability Reform: Organized Medicine Scores BIG!

Robert E. McAfee, MD

On March 9, medicine scored one of its biggest legislative victories ever when the U.S. House of Representatives, in a bipartisan vote, approved an AMA-backed amendment that would place a \$250,000 cap on pain-and-suffering awards in medical malpractice cases.

This historic vote came as a result of an all-out lobbying effort by your American Medical Association and many other medical organizations. It was a blockbuster victory for the AMA, the medical profession, and every practicing physician.

Liability reform has been at the top of medicine's legislative agenda for as long as most of us can remember. Now, after 20 years of tirelessly campaigning, we can claim a major win in Washington.

That's the good news. The not-quite-so-good news is that the legislation still has to go before the Senate, where the proposal is certain to be a prime target of the trial lawyers' lobby. So our task is only half complete. The vote there is likely to take place in the next few weeks, and before then we'll probably be calling on all of you to contact your senators and let them know where you stand.

Meanwhile, here are some of the things we've done, and are continuing to do.

1) We've mobilized the efforts of state and county medical societies and national specialty organizations to join us in this effort. In late March we sent a letter to every senator that was signed by the medical societies of all 50 states and the District of Columbia and 81 specialty societies, demonstrating their unity in calling for tort reform. In addition to limits on damage awards, we are seeking an expansion of the joint-and-several liability reforms to all defendants, not just those who sell products. The AMA Alliance also sent letters to every county legislative chair in the home districts of members of the Senate Judiciary Committee, urging them to call and fax their support for liability reforms.

2) We've gone directly to Capitol Hill. We urged state societies to contact their representatives one-on-one in their districts during the Presidents' Day recess, and many did so. During our recent National Leadership Conference in Washington, we held a reception for members of Congress and followed that up with one-on-one visits with members of Congress by physicians and delegations of physicians.

3) We've also gone public with our message. We've sponsored drive-time ads on Washington's top radio stations, rebutting some scare tactics used by the trial lawyers. We've placed print ads in the *Wall Street Journal* and in Capitol Hill publications. And we've sent our message to the editorial writers at all of the nation's top newspapers, with facts to back up our arguments.

The public is listening. A Gallup survey showed that more than 71 percent of Americans favor liability reforms, including caps on pain-and-suffering awards. Clearly, many of our patients are on our side. But we can take nothing for granted.

Tell your patients! Tell your colleagues! Tell your representatives in Congress! The AMA and organized medicine throughout the U.S. are leading the more than 700,000 physicians of America in the battle for liability reform. Congress must know we will not stop until the job is done.

As this is being written, liability reform is at the top of our priorities. But Medicare reform and the AMA's 1995 Patient Protection Act also will receive our major attention in the coming days and months.

Together, organized medicine is fighting for legislation that will allow you to care for your patients to the best of your ability and conscience. I invite all of you to join us in that fight. ☐

For additional information on the AMA's legislative programs, or for materials suitable for sharing with your patients, contact the AMA Department of News and Information at (312) 464-4430.

Dr. McAfee is president of the American Medical Association.

Because Decisions Are Made Here...

You Can Make A Difference Here.

Right now, key decisions are being made about health care reform on Capitol Hill...decisions that will directly affect you. Regardless of where you stand on the issue, one thing is certain...reform legislation will hit home with patients and health care professionals alike. Will you be ready to respond?

Thousands of physicians and patients are taking advantage of one clinical resource that is sure to prosper under any health care reform package. Home health care is a cost-effective alternative to traditional treatment modalities. It affords the one benefit essential to any successful reform bill: the ability to control medical costs without compromising quality of care.

To seek a career in home health care, call First American Home Care, formerly ABC Home Health Services, Inc. The nation's largest, privately-owned, Medicare-certified home health care provider, First American can show you the many advantages of providing health care in the home. Call us at 1-800-WORK-222, ext. 5004, day or night, for more information. We promote a drug-free workplace. Equal Opportunity Employer M/F/D/V.

PPHP Founder Talks of Medicine's Future

Elaine S. Herrmann
Maria T. Montesano

Dr. Brown

The Pennsylvania Medical Society's Board of Trustees in March approved a recommendation to fully support and endorse the goals of the Pennsylvania Physician Healthcare Plan, Inc. Also known as PPHP, the plan aims to be the commonwealth's first statewide, physician-owned managed care organization.

Gary C. Brown, MD, a Wyndmoor ophthalmologist, is the founder and driving force of PPHP. Shortly after the board action, Dr. Brown spoke with us about the concept of physician control, his involvement with PPHP, and the organization's chances of success.

Question: *We understand the goal of PPHP to be the development of Pennsylvania's first statewide, physician-owned managed care organization. That's pretty daunting. Can you give a little flavor for how you became involved, and what was your motivation personally?*

Dr. Brown: When the Clinton Plan collapsed, I saw there were other forces driving medicine...economic forces. Some of them were market driven and employer driven, but others were put into effect by the large insurance companies and large managed care organizations. While I think we have a wonderful medical system in this country—the best in the world for people who have access to it—I think everyone should have access. I saw that things were changing very quickly, despite the lack of government intervention, and that doctors have very little voice in the changes.

My philosophy and the philosophy of our organization is that we, as physicians, really care the most about patients. We're the ones who have the one-on-one contact with the patients, and unless we do something to assert our voice in medicine, we are going to lose our ability to do what we think is best for the patients.

Question: *So you think it is very important for the physicians to "take control?"*

Dr. Brown: Yes. The main point of this whole endeavor is that we are not out to maximize physicians' fees. We are out to maximize physician control in the medical system because we believe, unless we have some control again, we will lose complete say over the management of our patients. We believe we care the most and have the best knowledge to manage the patient care correctly.

Question: *As you carried the idea of a physician-owned managed care organization around Pennsylvania this past winter, how receptive were physicians to the idea?*

Dr. Brown: Physicians were very receptive of this concept. I think physicians realize that many existing for-profit managed care organizations believe good care is based on the bottom line. Physicians are upset by this, or upset by the fact that the organizations can't manage patients in the way the physicians think is appropriate. Physicians are most bothered to see this continuing with no end in sight.

Question: *How about looking on the other side. Do you think there is a good chance of signing up enough patients to succeed down the road?*

Dr. Brown: Inevitably I'm asked, "But who cares if the physicians want it if the employers don't want it?" The question then is, What advantages will we be able to offer over some of the existing companies out there?

In regard to the for-profit organizations, some of them take off 30 cents on the dollar before a cent goes back into medical care. That's administrative expenses and profit. We believe physicians will be able to do it somewhere in the range of 12 cents plus or minus, and, theoretically, once we get going, we may be able to offer a reduced premium if we can develop large panels of physicians, which we hope to do...to offer patients a greater choice of physicians.

But most importantly, we intend to offer quality assurance that is truly run by

Ms. Herrmann is managing editor, and Miss Montesano is assistant managing editor of PENNSYLVANIA MEDICINE.

physicians. Nowadays, when people talk about quality assurance, some of what they measure is not truly what physicians think is important. For example, they measure how long you have to wait in the doctor's office or if the doctor's office is relatively attractive.

We believe the quality of the medical care is most important and that physicians can address that better than anybody else...to give patients a better chance of knowing that the surgery they are having is appropriate and that if a procedure indeed is a benefit, that it will not be denied to them. We believe that quality assurance should be based on medical fact, [rather] than what it's being based on at this point. That's the key—the one thing the others have not been able to offer to date.

Question: *And that would give you a competitive advantage?*

Dr. Brown: We certainly think so. If we went to an employee benefits manager and said, "Rather than looking at the fluff, we are really telling you what's important, what's good and not good for the welfare of your patients, and we are going to watch out for the welfare of your patients," they may just say, "These people sound like they have something."

Question: *How much, approximately, is needed to capitalize?*

Dr. Brown: The feasibility study performed by the Garvey Group estimated that we need \$16.5 million to capitalize the corporation. We would be in much better shape if we raised twice that amount of money.

Question: *How willing are you to seek outside investment if PPHP can't raise enough money solely from physicians?*

Dr. Brown: If we can't raise the amount of money we need, we had thought about the possibility of bringing in outside investors as minority shareholders. But at this point we would much prefer to do it just within the medical community.

Question: *We realize it's very early in the process, but do you have a sense of how PPHP might be marketed?*

Dr. Brown: It is early at this point, [but] we would certainly do it the way the other insurers do it—market the health insurance plans to employers...The key is having a good product and one that stands out...

We fully believe the physicians in their offices will push the product because they are the ones who are the shareholders, the ones who believe in the concept...We also have to get out into the media, just like the other health insurers are at this point. It's pretty much common knowledge that we will have to beat them at their own game on Madison Avenue.

Question: *Do you feel that this effort goes against the stereotypical thinking that doctors want to be doctors, and they should let someone else run the shop?*

Dr. Brown: Interestingly enough, physicians were among the signers of the Declaration of Independence. After World War II, the amount of knowledge required of physicians multiplied, and it became difficult to be an outstanding physician unless you devoted 90 percent of your

time to medicine. And it still is very difficult. That's one of the reasons physicians have let the management decisions slip away.

For example, 50 years ago physicians made most of the financial management decisions in hospitals. I think if physicians take the attitude that we are just going to do medicine, and we're not going to be involved in anything else, then the vast majority will wind up as employees [who] have little relative say in the management of their patients. The writing is very clearly on the wall.

I would refer people to the May 9, 1994, *Medical Economics* interview with Ira Magaziner, the architect of the Clintons' health care plan. The title of the article is, "Doctors Should Take Control of the Health Care System." Magaziner's group saw it very clearly and said that, if doctors take control, the majority of medicine in this country may remain in somewhat the form that it is, but if not—if doctors do not organize large insurance companies—managed care organizations will take control.

Question: *PPHP's effort is statewide, but you've talked in the past about health care being more regional. Can you comment on how both these thoughts fit into the PPHP effort?*

Dr. Brown: Health care is regional, but we believe that we have to set our sights on a statewide organization because if we did not...there would probably be several [regional] endeavors, [and we'd] wind up with a number of undercapitalized, physician-owned managed care organizations. Physicians have failed in the past because they haven't had enough money, [and] when you're undercapitalized, you can't get through the first two or three lean years—you don't have the right executives; you don't have the money to buy the software for the quality assurance; it just doesn't make it. Although we may have to focus our efforts initially on various regions within the state, we thought we'd be much better off with a larger statewide parent organization, and, once we have achieved our goal of providing health care services to patients statewide, we hope to have local boards...because, indeed, a good deal of health care is local. We believe such a structure will give us a greater chance for success.

Question: *Are you anticipating a varied payment schedule, and, if so, what might that be?*

Dr. Brown: At this point we have not tied ourselves into a payment schedule, the reason being we intend to put more money back into health care than the other insurers. That essentially is our basic philosophy, and the physicians have to realize this. We are not out there to give dividends to shareholders.

To tie ourselves into a fee schedule at this point would be very limiting, particularly since we don't know where the market will be in a year-and-a-half or two years when we start insuring patients. We don't know whether health care premiums are going to remain static, or whether they'll go up slightly, or whether they may even go down, and that will totally change things. We hope to be able to reimburse physicians quite fairly.

Question: *What criteria do you expect to use for utilization review, peer review, and credentialing?*

→

Dr. Brown: We have not worked out the specifics on credentialing, but there will be some type of credentialing. What kind will depend also on state and federal rules.

As for utilization review, most of the talk at this point is theoretical. Certain protocols have been developed by many of the specialty groups, [and] there are many of these protocols out there. That is not to say everything has to be cookbook medicine, but there are certain procedures that are of benefit, and there are certain procedures that are probably not of benefit, and physicians can pick these out fairly well.

Interestingly enough, over 90 percent of the doctors in the state in our feasibility study said they would be willing to subject their records to peer review. And over 80 percent said they would be willing to do peer review. We will have fairly strict utilization review; on the other hand, peer review will be physician friendly. But we cannot tolerate improper medical care. And I think physicians are best able to tell whether care is appropriate or inappropriate.

Question: *How would PPHP benefit patients compared to other managed care organizations?*

Dr. Brown: Well, as I mentioned earlier, I hope we would be able to reduce the premiums, because we are not taking out 18 to 20 cents on the dollar to give to our shareholders. Second, I hope that we would have a good number of physicians in the state participating. In Connecticut, 80 to 85 percent of physicians participate in a similar health plan. With large panels, patients would have a choice of physicians and would not have to switch physicians if their company went to a managed care plan.

Third, we would hope to have very high quality utilization review so we can spot unnecessary procedures—and if procedures are truly indicated, they would not be denied to the patients. We think there are a number of theoretical advantages there. Our bottom line will not be the dollar.

Question: *Physicians have brought up the question, Are there any guarantees that PPHP in five years won't "sell-out?" In other states, there have been similar projects selling to larger interests.*

Dr. Brown: That's a very good question, but before I answer it, let me explain that each doctor will be allowed to buy one voting share of stock, so no one will have more than one vote, whether it's a board member or Gary Brown or anybody in the physician community who buys a share of stock. One doc, one vote.

Now, the board of directors of PPHP has voted that 90 percent of the voting shareholders must vote to sell the company for it to be sold. We're not sure how much stronger we could really make that, essentially. We are not doing this to make a short-term profit for every doctor in Pennsylvania.

Connecticut's health plan just sold to HSI—Health Systems International. They made a large profit for physician investors. But again, that is not our goal in Pennsylvania. We believe that if that was to happen, we would be actually doing Pennsylvania physicians a disservice.

Question: *Why do you think support for PPHP is coming from young physicians?*

Dr. Brown: Young physicians are the ones who are going to be affected. I've been in practice now for about 15

years; it will affect me somewhat, but it really won't affect the people who are 55 and older. Those who are really going to be affected are the people who are 30 or 32, because within the next 10 years, the system will change drastically. Unless those physicians assert their voices, they will have very little to say about medical care in the United States.

The most dangerous thing physicians can do is be complacent. If they don't get out there and promote the ideas they think are most important for the welfare of their patients, then somebody else will promote those ideas and certainly make the decisions for them. If young physicians see something like this on the horizon, I think they will continue to be very supportive.

Question: *Do you have an expected start-up date of enrollment?*

Dr. Brown: That's difficult. Our prospectus will run for three months—we anticipate May through August. If we raise the money, then we will immediately begin to enhance our business plan and work on the HMO application, which could very well take a few months. Then we have to submit it to the proper state authorities. At that point, it is possible that we will encounter a delay. The feasibility study targeted early '96 as the start-up date for enrollment. While that date is achievable in terms of our own internal schedule, if the HMO application remains pending with the state for more than a few months, we might not be able to begin enrollment until late '96 or early '97.

Question: *Where do you see this effort in five years?*

Dr. Brown: I would hope that in five years we would be well off the ground...that we are a statewide organization with statewide name recognition. We will be given permission to start only in the regions where we have our panels set up, where we have enough doctors and enough hospitals. New Jersey's plan had hoped that in five years it would be insuring a million people. If we enroll half that number in five years, we will probably be very successful.

Question: *How did you build the board? Was it by geography, specialties...?*

Dr. Brown: We tried to get people who are very dedicated, very interested in the concept. It takes a tremendous amount of time and personal expense, and the board is not compensated for what it does.

We have representation from all over the state at this point, including both primary care physicians and specialists. Essentially, though, we tried to find people interested in the concept, dedicated to the concept, and willing to work hard for the concept. As we spread the word throughout the state, these people surfaced and expressed their interest. ○

Next month in PENNSYLVANIA MEDICINE...

...look for an article on the relationship forming between PPHP and Infinity Management Services, Inc.—a new, wholly owned subsidiary of the Pennsylvania Medical Society Liability Insurance Company (PMSLIC).

Pennsylvania Medical Society members are slashing their premium costs with Dodson's Dividend Plan for workers' compensation insurance.

A total of more than \$3.4 MILLION in dividends has been paid to insured members since 1973.

Excellent Savings Potential

- **5% discount on premium rates** when policies are issued
- **Yearly dividend opportunities**
A dividend has been returned to insured members **every year** for 21 years.*
- Dividend paid in 1994 —
\$257,678.57
- Dividends paid (since 1973) —
\$3,675,320

**State laws prohibit insurance companies from guaranteeing future dividends.*

Interest-free Premium Payment Plan

Flexible premium payment options are yours with Dodson Group. Your premiums may be paid in convenient installments — **all with no interest fees or service charges.**

The Dodson Dividend Plan is the only workers' compensation insurance program endorsed by the Pennsylvania Medical Society.

Outstanding Personal Service

Claims are handled locally by competent adjusters carefully selected for their expertise and ability to serve our policyholders.

- Upon settlement, most claim payments are in the mail within 48 hours.

Our professional home office and field staffs are ready to assist you in person or by phone.

Tell Us Your Stories of Managed Care Interference

This month, the State Society begins a three-month initiative to provide physicians the opportunity to report cases in which managed care health insurance payers are interfering with patient care.

The Society has long argued the need for legislative and regulatory safeguards to protect patients from managed care policies that inappropriately deny payment for medical services. The most effective support for these arguments comes from real-life examples, which the Society is collecting through this new initiative.

If you have a story you would like to share that may be convincing to non-physician audiences—legislators, regulators, the media, and the general public—we'd like to know about it.

To guide and ease your efforts, the Society has developed a Quality Alert Form (see opposite page) to be published in the next several issues of *Executive Report* and *PENNSYLVANIA MEDICINE*. The Society intends the form to be user friendly and not another hassle for physicians; if you have suggestions about how to improve the form, we'd like to hear that too.

Fax or mail completed forms to Society headquarters at the address or number listed at the top of the form. Direct any questions to Dennis Olmstead in the Department of Medical Economics, Ext. 1483.

Answers to Your Questions About "QMB Crossover" Payments

Department of Medical Economics

As a result of the Society's court victory in the qualified Medicare beneficiary (QMB) lawsuit, the Department of Public Welfare (DPW) began paying physicians full Medicare deductible and co-insurance amounts in February 1995. In previous Society publications, we alerted members that there would be some "glitches" once the payments from DPW began, due to the complexity of the crossover process.

Below, the Society's Department of Medical Economics answers some of the most commonly asked questions raised by members. Society staff will continue to monitor the QMB process and provide updated information as it becomes available.

Q: *The QMB program existed prior to the Pennsylvania Medical Society lawsuit and subsequent court decision. Why am I now receiving payments for Medicare deductible and co-insurance from DPW, but didn't in the past?*

A: Although DPW recognized the QMB program and, in fact, began

crossing over claims from Medicare Part B in June 1994, DPW would not make any payments unless the Medical Assistance (MA) fee schedule amount for a procedure code exceeded the Medicare fee schedule amount for that same procedure code. Medical Assistance would then reimburse the difference between its fee schedule amount and Medicare's. Effective for QMB claims processed by DPW after September 26, 1994, full Medicare co-insurance and deductible payments will be made, without regard to the Medical Assistance fee.

Q: *How can I determine whether a patient has enrolled in the QMB program and therefore is eligible for benefits when they present themselves in my office?*

A: You should request from the patient his or her Medicare-eligibility and Medical Assistance Access cards. Using DPW's Eligibility Verification System (EVS) through the point-of-sale device, your computer, or via

phone (800-766-5387), you can verify the recipient's coverage. **LISTEN TO THE ENTIRE MESSAGE.**

The keys to identifying coverage are the category and program status codes. Those patients with a category/program status code combination of TA-65, TJ-65, B-00, or status codes 21 or 22 used with any category code, are *not* eligible for QMB program benefits and payment of the full deductible and co-insurance.

Q: *Do I need to do anything in order to be paid the co-insurance and deductible amounts?*

A: In most cases, you do not have to do anything since the Medicare carrier to whom the claim was originally submitted will automatically submit the claim to the Medical Assistance program for payment.

Q: *Are all physicians in the state who treat QMBs currently receiving payments for Medicare deductibles and co-insurance from Medical Assistance?*

Quality Alert Form

How and Why to Use This Form: Use this form to document real-life examples of managed care practices that jeopardize quality of care. The Society is collecting these examples to prove the need for managed care safeguards. Information revealed on this form or during a follow-up investigation may be shared with government officials and the public. Please exclude any information that may identify a patient to assure patient confidentiality.

What is a "Quality Incident?": A quality incident occurs when a managed care plan denies or unduly delays medically appropriate care or engages in conduct that could result in a quality or access problem. Prospective payment determinations are considered care decisions—as the patient often elects not to proceed absent third-party coverage. Quality incidents also can occur in other managed care contexts. The payer's conduct may send the wrong message or otherwise encourage inappropriate provider behavior. Network exclusions also can adversely impact geographic and specialty access. Use a separate form for each incident or practice.

Please check the relevant boxes below to describe the incident or practice.

**Please explain below*

Utilization Review Problem

Type of Review

- ☐ Prospective review
- ☐ Retrospective review
- ☐ Concurrent length of stay

***Explanations and additional information you may wish to provide:**

A: No, physicians not participating in the Medical Assistance program are not currently receiving QMB payments. This is not to say that non-MA-participating physicians will not be receiving payments in the future for previously submitted claims and future claims. DPW continues to work on the necessary system changes to develop its Provider Enumeration Project, which, when completed, will have the ability to reimburse non-MA-participating physicians. DPW is hopeful this project will be operational during the summer of 1995.

Q: How can I notify DPW of particular problems or questions I have related to QMBs?

A: DPW has developed a "Crossover Problem Referral Form" which will alert department staff of problems the physician is experiencing with the crossover process. This form was mailed to all participating Medical Assistance providers as a Remittance Advice Alert in cycles 30 and 31, dated January 17, 1995. For a copy of this form, call the Society's Department of Medical Economics at (800) 228-7823 or (717) 558-7750.

Q: How long should I wait for a DPW payment of co-insurance and/or deductibles for a QMB patient after I have received the Medicare voucher (EOMB)?

A: When the Medicare Part B claim is processed by the Part B carrier, the physician will receive an EOMB from the carrier. The voucher will contain a message that payment information has "crossed over" to Medicaid. DPW will make payment within 60 days of the voucher date. When the claim is processed by DPW for the applicable deductible/co-insurance, the Medical Assistance Remittance Advice will contain edit message code 747, which means that this is a claim that has "crossed over" from Medicare.

If a claim that has been crossed over to Medical Assistance does not appear on your Medical Assistance Remittance Advice within 60 days of receipt from the Medicare EOMB date, you may submit an MA319 or HCFA 1500 form for payment to Medical Assistance, using your regular claims submission media.

When completing an MA319 form, follow instructions in your *Medical Assistance Handbook*. When completing a HCFA 1500 form, follow instructions found in Medical

Assistance *Bulletin* 99-94-15 for billing Medicare deductibles and co-insurance.

If you do submit a hard-copy invoice for Medicare Part B services, do not include non-Medicare services on that invoice. Doing so could cause claims to be rejected or paid at an inappropriate rate.

Q: I've received a duplicate payment for the applicable deductible and/or co-insurance—one from the patient's supplemental insurer and one from DPW. How should I handle the overpayment?

A: The patient's supplemental insurance payment is primary to the payment from DPW. The DPW payment will need to be refunded to DPW. Physicians currently have two options for refunding duplicate payments:

1) Use the MA319A—*Claim Adjustment Form*. Follow the instructions outlined in the "Billing Information" section of your *Medical Assistance Handbook* to fill out this form physicians use to refund overpayments made by the DPW. When completing the form, be sure to furnish the correct Medicare-approved amount in Block 29, O and insert 0.00 in the usual charge field, Block 29, N; or

(2) Do nothing at this time to correct the overpayments. DPW is developing an automated process to recover the duplicate payments in the near future. PLEASE DO NOT RETURN CHECKS OR MAIL REFUND CHECKS TO THE DEPARTMENT FOR THESE DUPLICATE PAYMENTS. You will be notified of this recovery prior to its occurrence.

The Society's Department of Medical Economics staff continues to work closely with DPW and Xact Medicare Services to develop claims processing system enhancements to eliminate the duplicate payment problem. Staff have offered suggestions to DPW on other methods physicians could use to return overpayment monies to DPW. The department is reviewing the suggestions.

DPW AUDITING EMERGENCY VISIT BILLINGS

The Pennsylvania Department of Public Welfare (DPW), which administers the commonwealth's Medicaid program, has initiated an

audit of emergency department physician billings.

Based upon an internal review of first-quarter 1994 claims history, DPW has identified approximately 150 physicians who did not bill for any non-emergency visits, but rather billed for only *emergency visits*. The result: an overpayment situation.

The Medicaid Program distinguishes between emergency and non-emergency visits from a payment and coding perspective. Non-emergency visits are reimbursed at a rate of \$15 and should be billed using procedure code W9029 (non-emergency medical, hospital visit, emergency room). True emergency visits are reimbursed at a rate that ranges from \$20 to \$50 depending on the level of care rendered. These should be billed using procedure codes 99281-99285.

Also, when billing for emergency services, be sure to place the number "1" in item 29F of the MA319 claim form or block 24I of the HCFA 1500 form to denote that the service provided was of an urgent or emergency nature.

Late last month, DPW's Bureau of Program Integrity began mailing letters to a small percentage of the physicians to bring their attention to the situation. Note, however, that not all 150 physicians would have received notification in April. At press time, DPW mailings continued.

INSURER REVIEWING X-RAY EQUIPMENT, PROCEDURES

Pennsylvania Blue Shield has announced that it is reviewing X-ray equipment and radiology procedures used by Pennsylvania health care providers who bill the insurer for taking and interpreting X-rays.

Blue Shield says the study will ensure that its subscribers "receive the highest quality of radiology services."

Under examination are: the quality of X-ray machines and the images they produce, the training and certification of personnel who operate the equipment, and whether X-rays are taken correctly.

Of the more than 2,000 questionnaires already sent to providers in Central and Eastern Pennsylvania, Blue Shield concludes that 73 percent of providers meet quality standards of the review. Data on providers in Western Pennsylvania is unavailable until next month.

YPS: The Lifeblood of Organized Medicine

John R. Martell Jr., MD

The House of Delegates at the interim meeting in December 1994 approved the creation of a new young physician trustee seat on the AMA board. The first election to fill this position will take place in June 1995. The individual elected to this seat will be a practicing, fully trained physician, under the age of 40.

What appears to be a modest accomplishment at first glance was the direct result of years of intense work and effort spearheaded by *your own* Pennsylvania Young Physicians Section. When the chorus of voices rose to a crescendo, organized medicine stopped and listened. Democracy can, at times, be a relatively slow and arduous process, lest we forget!

Many of you out there who are not involved in the process may say, "So what?" Let me give an overview of the demographics. Young physicians make up a little over one-fourth of all practicing physicians in the United States, and they make up about 30 percent of the AMA membership. Yet, young physicians are not represented on the AMA board.

Currently, *no fully trained* physicians under the age of 40 serve on the AMA board. Additionally, only four delegates and 19 alternate delegates were seated as young physicians at the last interim meeting of the AMA House of Delegates. Even though young physicians are

represented in numbers by the membership, they are clearly not represented on the governing bodies within the AMA.

Young physicians bring a unique and valuable perspective to the table. We have different concerns, values,

"It will be the younger physicians who must practice for the next 20 years or longer in an ever-evolving delivery system."

and hopes for the future. Our concerns relate to managed care issues. Managed care appears poised to exert a profound influence on the way each and every one of us practice.

It is for these reasons that our voices must be heard. Any changes that occur today or in the foreseeable future will disproportionately affect

our practice. Young physicians need to have a say in their future.

It will be the younger physicians who must practice for the next 20 years or longer in an ever-evolving delivery system. As managed care heats up competition in our over-bedded and over-specialized regions, it is we who appear the most vulnerable. Young physicians, already overburdened with debt, lack the positions of power within their local medical hierarchies that would enable them to control their own destiny.

Geographical displacement, discriminatory medical panel practices, and declining income are all potential problems that young physicians may face in the not-too-distant future.

Yet, I remain pessimistic that we have not yet experienced enough pain to begin to work together instead of against one another. Adequate representation at each level of organized medicine is the first step. We are excited about this new AMA young physician board position and view it as a positive step into the future.

All of us are too busy with the development of our practices and families; however, I suggest to you that it is not in your own best interests to defer to others at this most critical time. Assume leadership positions when offered, get involved if only on the local level, because the sacrifice made now may secure not only your future, but our future.

Organized medicine has extended an outstretched hand. We must take it and assume our place alongside our colleagues. Tremendous responsibilities come along with accepting this new role, if medicine is to remain a profession and if we are to continue in our primary role of patient advocate. Young physicians are the lifeblood of organized medicine. Times are indeed changing!

Dr. Martell, a Pittsburgh orthopedic surgeon, was the 1993-94 YPS trustee to the State Society's board.

Physician Leverage: Your Strength Is in Your Unity

Michael P. Lance

Increasing your negotiating power and maintaining ownership of your medical practice can bring many benefits to physicians and patients alike.

**"Increased
HMO
competition
strengthens
the negotiating
position of
POs and
hospitals."**

In my first few months on the job as chief executive officer of the PennMed Member Services Company (PMSCO), I've had the opportunity to speak with large and small groups of physicians across the commonwealth. If you ask anybody who has heard me speak, they'll tell you that my messages are simple and straightforward. And if physicians in Pennsylvania get one message from PMSCO, it should be this: Physicians need *leverage*.

From the physician perspective, leverage can be defined as being in the right negotiating position to achieve fair and equitable contractual agreements with payers. Currently, payers have significant leverage and will try to retain that position. I have yet to see a provider organization in this state that can truly influence appropriate contract terms from an insurance company or health maintenance organization (HMO).

Hospitals also possess a significant amount of leverage. They have deep pockets, and they work together with relative ease. They exercise their leverage because they are in an even greater crisis situation than physicians and are more desperate to preserve their reimbursement status.

Increasing your leverage

Physicians can increase their leverage in several ways. One key step is for physicians to work together and unify in their local communities into a well-organized physician organization (PO). Individually, physicians have little or no bargaining power with payers or hospitals. But if physicians join together in well-structured, well-managed organizations that meet the needs of the marketplace, there is no doubt in my mind that they will gain considerable leverage.

A second key element in improving the leverage of providers is to encourage multiple HMOs to enter your community. Increased HMO competition strengthens the negotiating position of POs and hospitals. The HMOs begin to compete against each other for your services and to include you in their provider panel.

Another important message we try to convey is that physicians, particularly those in primary care, should not sell their practices unless they have no other option. Primary care physicians, whose practices are the main targets for buy-outs by insurers and hospitals, can have tremendous influence in the managed care environment that is sweeping Pennsylvania. Yet, if they sell out and become an employee just because they are frightened of the future, they sacrifice a golden opportunity to have an effect in the delivery of health care.

Also, primary care physicians shouldn't sell their practices; the value of their practices will only climb over the next few years. The primary care physicians at Riverside Independent Practice Association, the IPA which I managed in Southern California, were being paid very well through the IPA's capitated contracts with HMOs and preferred provider organizations (PPOs). Two of them, who received at least 70 to 80 percent of their revenue through the IPA, were receiving more than \$600,000 a year in capitated payments just from our IPA's HMO contracts. Eighty percent received between \$250,000 and \$600,000 in primary care capitation.

If you sell your practice today, however, you will never see those kinds of capitated dollar opportunities when they materialize in Pennsylvania. Instead, you will get a paycheck as an employee. The profits from your hard work will flow to the owner of your practice—most likely a hospital or an HMO that benefits from your enhanced value.

Another impediment to physician leverage (and physician well-being) is the ex-

Mr. Lance is chief executive officer, PennMed Member Services Company.

Report on Financing of Practice Acquisitions

HPSC Financial Services has recently provided the financing for the acquisition of practices whose selling prices are shown below.

State	Selling Price	State	Selling Price	State	Selling Price
CA	\$60,000	GA	\$329,000	MI	\$365,000
CA	55,000	ID	225,000	MI	214,000
CO	55,000	LA	185,000	MO	300,000
FL	240,000	LA	129,000	MO	395,500

Selling, expanding, acquiring a practice? HPSC, which has financed over 60,000 doctors since 1975, offers you all these benefits:

1. Financing of practice acquisitions, up to 100% of purchase price. Competitive fixed rates – no "points," variables, or hidden fees.
2. Through broker network we help seller find a buyer; buyer find a seller; get appraisals, assist with practice projections.
3. For start-ups and expanding practices, we finance equipment, leasehold improvements, working capital, merchandise contracts, computers, and other office equipment.
4. Innovative, flexible custom plans, geared to cash flow; tax benefits.
5. Leasing options: deferred payment; no down payment; graduated payments up to 72 months.
6. Quick response: up to \$125,000, 1 hour. Over \$125,000, with all requested documents in place, 24-48 hours.
7. Easy add-on to existing lease as practice grows.
8. Funding, servicing of all contracts in-house.

Would you like to discuss your project, or get more information?
Call us at 1-800-225-2488 or fax 1-800-526-0259.

PAM 5

***Innovative Financing
for Healthcare Professionals***

Sixty State Street, Boston, MA 02109-1803

clusive agreement. In one area of Pennsylvania, an HMO and a health system have forced physicians in a physician-hospital organization (PHO) to make the choice between an exclusive agreement with them or no HMO business at all. While there are other HMOs willing to move into the market, many physicians will be unable to contract with them. Physicians with exclusive agreements forfeit their value and, perhaps worse, put their fate in the hands of a payer.

Expected changes in insurance regulations should allow physicians to use their new-found leverage to negotiate contracts in which they are rewarded for reducing hospital utilization. After all, physicians admit patients to hospitals, utilize the medical resources, and decide when patients will be discharged. If they are able to reduce hospital costs, they should share appropriately in the hospital risk pools. This arrangement, unheard of until now in Pennsylvania, affords physicians their greatest opportunity to benefit from managed care.

Helping your patients

Physician leverage, however, does not just benefit physicians. Patients will benefit as much as their doctors. Physicians and other providers are more concerned about the welfare of their patients than the bottom line. At Riverside IPA, we were able to offer patients the kind of care they wanted while still keeping an eye on costs. Our philosophy was to not withhold care, but to instead use the medical resources more cost effectively.

Only physicians working one-on-one with patients can and should make decisions about when a certain level of care is appropriate. If a physician organization is structured and operated well, then member physicians don't have to worry about whether a patient is from a managed care or a traditional fee-for-service contract. All the physician has to worry about is providing quality care in a cost-effective manner.

This may sound like a utopian dream, but it isn't. I helped make it work for Riverside IPA in California, and I know it can work for physicians in Pennsylvania. It all starts, however, with establishing appropriate leverage. Remember: Your strength is in your unity. ☺

Patients' Medical Records: Whose Business Is It Anyway?

Susan M. Weber, Esq.

Physicians receive many requests for medical records information: Attorneys request medical records information for court cases; colleagues request information which may assist with consultations or in the medical care of individual patients; insurers request information with respect to necessity or appropriateness of care. However, none of these scenarios prompt as many telephone calls for advice to the Office of General Counsel at State Society headquarters as does the call or letter from a patient requesting a copy of his or her medical record.

Years ago, patients did not have access to their medical records, or if they did, they were permitted to review the records only in the presence of a physician or nurse, who would provide explanations as necessary. Today, that is no longer the case.

Pennsylvania Medical Board regulations require allopathic physicians to retain medical records of their adult patients for at least seven years from the date of the last service for which a medical record entry is required. Physicians must retain medical records for minor patients for one year after the patient reaches the age of majority, even if that means the records will be kept longer than seven years.

However, since the statute of limitations for negligence actions is two years from the date the individual knew or should have known that the medical care allegedly caused injury, retention of the record for an additional year would seem prudent. A conservative approach, in fact, would dictate retaining the record indefinitely, since information supporting alleged negligence could come many years after treatment. Without the medical record, the physician would have no basis for defense of a negligence action.

The Osteopathic Medical Board regulations also require retention of the medical record for seven years from the date of the

last entry. In addition, the board requires that medical records of minors be kept for two years after the age of majority or seven years, whichever is later.

Both medical boards permit disciplinary action against a physician who does not make available the medical record of a patient who has requested a copy. The State Board of Medicine regulations for allopathic physicians specifically provide that refusal to provide a patient with a copy is unprofessional conduct which may subject a physician to discipline. The Osteopathic Medical Board regulations do not state that failure to provide a copy of the medical record is unprofessional conduct, but they do require physicians to provide a copy of the medical record upon a patient's request. The Osteopathic Practice Act provides that the board can suspend or revoke a physician's license for violation of one of the board regulations.

Who owns medical records?

It follows from these requirements that physicians are the actual owners of the medical records of their patients; the patient is never the "owner" of the actual record in a purely legal sense. It may be viewed from this perspective: While the patient may own the information contained within the medical record, the physician owns the actual paper containing the information. Although patients may have a virtually unrestricted right of access to medical records, the physician still retains actual ownership and possession of the original documents.

Generally, patients have a right to view their medical records, obtain copies of them, or have them forwarded to another physician or other health care providers. Physicians must provide patients with access to all information contained in the medical records, unless access is specifically restricted by the attending physician.

Under allopathic Medical Board regulations, a physician may withhold information from a patient if, in the reasonable exercise of the physician's professional judgment, release of the information

Ms. Weber is the Society's assistant general counsel.

would adversely affect the patient's physical or mental health. The Osteopathic Medical Board regulations, however, do not limit access to medical records in this or any other manner.

In the event of a patient's death, the patient's legal representative assumes the right of access to medical records. Because the right of access to records does not extend to family members in general, the medical record of a deceased patient should not automatically be provided to the "next of kin." Duly authorized legal representatives, however, such as executors or administrators of wills, stand in the shoes of the deceased and have the right of access to medical records.

Patients' right of access is not absolute. Allopathic medical board regulations, however, state that physicians may not withhold medical records until unpaid bills related to the provision of medical services are paid.

Can fees be charged?

Both medical boards' regulations state that physicians may charge patients a reasonable fee for providing copies of medical records. While the regulations do not define what a "reasonable" fee would be, the fee should be reasonably related to the actual cost of making copies available. These costs could include: copying costs, the time of the person making the copies, mailing costs, and the like.

Ambiguity concerning the definition of "reasonable" may not apply in all instances. The workers' compensation statute, for example, only permits a charge for medical records related to a workers' compensation claim equal to that payable under the Medicare system—currently seven cents per page plus mailing costs.

The term "reasonable" may not be ambiguous for much longer, because it may be defined by a new statute during the current session of the General Assembly. A bill pending in the Pennsylvania legislature would mandate a ceiling of 25 cents per page for the provision of medical records. That bill, at press time, is in committee; it may be months before the likelihood of its passage is known.

Physicians should avoid using subtle measures to restrict access to medical records. For example, a physician should not require a patient to sign a release of liability or a similar document in exchange for access to medical records.

What about when you retire?

Prior to retirement, a physician should notify patients of the impending retirement, and offer them the opportunity to obtain a

copy of their medical records or have the records sent to another physician or other health care provider. Those records not retrieved within a reasonable time can be retained by the retired physician or another physician for the statutory retention period.

The retiring physician should notify patients where records will be held after the physician retires. Since retired physicians are not immune from suit for professional negligence which allegedly occurred years before, a conservative approach would include the retention of original medical records indefinitely.

What about minors' records?

As a general rule, parents of minors have unrestricted access to their children's medical records. The Pennsylvania Divorce Code permits both parents equal access to their children's medical, dental, religious, and educational records. There are, however, some limitations on parental access to medical records. The issue of access to medical records is closely related and parallels the issue of informed consent.

In Pennsylvania, certain minors may consent to medical treatment for themselves, and no parental consent is required. Any minor who is 18 years of age or older, or who has graduated from high school, or has married, or who has been pregnant, may give effective consent to treatment. Minors seeking care for the purposes of diagnosis or treatment of pregnancy, venereal diseases, or any disease reportable under the Disease Prevention and Control Act may consent to that care. Any minor 17 years of age or older may also give effective consent to the donation of blood.

Any minor 14 years of age or older may give consent for voluntary inpatient treatment under the Mental Health Procedures Act, provided that he or she substantially understands the nature of the treatment. Under that act, parents must be notified and given the opportunity to object. Parental notification by physicians is discretionary, however, with respect to treatment—including counseling—for drug or alcohol problems, under the Drug and Alcohol Abuse Control Act.

In circumstances where certain minors may give effective consent to treatment, the confidentiality of those records logically follows. The exceptions to the requirement of parental consent discussed above were developed to further the public policy of encouraging minors to seek treatment. Therefore, parents should not automatically be granted access to the minor's record in these situations. Physicians

"Although patients may have a virtually unrestricted right of access to medical records, the physician still retains actual ownership and possession of the original documents."

should seek the advice of counsel if confused over the provision of medical records to parents of minors.

What is your duty of confidentiality?

A physician's ownership right in medical records includes a concomitant duty to maintain confidentiality with regard to their contents. This includes sensitive medical data concerning the patient which could pose a serious threat to a patient's right not to have personal matters revealed without consent. However, the right of confidentiality is the patient's; the physician may not waive the right. A patient is "deemed" to waive this right to confidentiality of medical records and consent to their release upon the filing of a lawsuit claiming damages for personal injuries.

Generally, the patient has an absolute right to consent to release of medical records to any interested party. However, a physician may grant access to certain authorized parties in the absence of such consent. An obvious example is a physician's right to provide medical records to other health care providers involved in consultations with respect to the patient's treatment. In addition, physicians may release medical records to any person holding a medical power of attorney. A general power of attorney does not typically grant access to medical records.

Physicians may also release medical records to insurance companies for reimbursement purposes in certain circumstances. Claim forms may contain the patient's signature authorizing release of medical records to the insurance company. Subscriber agreements between the patient and the insurance company may give consent for the release of records. However, because many subscriber agreements are signed by the representatives of the patient's employer and not the patient, neither the patient nor his or her dependents have granted the insurance company access to medical records.

Prudent physicians would obtain a separate written consent from all patients for the release of information to insurance companies for reimbursement purposes. A single written form retained in the patient's chart would suffice, except where special consent is required by statute.

Note that any signed subscriber agreement would be ineffective for the release of medical records pertaining to drug or alcohol treatment or to information with respect to HIV-related information.

How to handle HIV-related records?

Hospitals and physicians must take special precautions with medical records

containing confidential HIV-related information. According to Pennsylvania's Confidentiality of HIV-Related Information Act, this includes information about whether a patient has been the subject of an HIV-related test, has HIV or a related illness, or any information which could reasonably identify a patient as having an HIV-related condition or contact with high-risk individuals.

This means that if a patient discloses the fact that he or she is an intravenous drug user and that information is included in his or her medical record, under the statute it is considered confidential HIV-related information. Since such a broad class of information is deemed "confidential" under Pennsylvania law, physicians must be careful to release records containing such information only on a strict "need-to-know" basis.

A health care provider possessing medical records containing confidential HIV-related information must keep them absolutely confidential. The records may be released to the patient, of course, as well as to any person designated by the patient's written consent specific to the HIV-related information. The physician may also disclose the information to any other health care provider involved in the emergency care or routine treatment of the patient without a specific release.

Other parties who have the right of access to HIV-related information without the patient's consent are:

- peer review or accreditation bodies, or other entities which provide oversight to health care providers;
- insurers, for reimbursement purposes only;
- state and local health officials, for purposes of disease control or vital statistics gathering;
- employees of juvenile justice and child welfare agencies providing residential placement who have a need to know the HIV status of the child; and
- funeral directors.

Pennsylvania law does not require physicians to segregate confidential HIV-related information from other portions of the patient's medical record. Therefore, physicians should be wary of inadvertent, yet illegal disclosures of HIV-related information when any patient's records are being transferred for any reason. ◊

ACTIONS OF THE BOARD OF TRUSTEES, MARCH 7-8, 1995

DEUNIFICATION LANGUAGE PREPARED FOR FALL

Anticipating that unification with the AMA may again be up for debate at the State Society's annual meeting in October, the Society's Board of Trustees at its March meeting directed the Committee on Bylaws to develop and publish in the Official Call language to deunify from the AMA. Whether the board would support such a change, however, is undecided at this time.

Unification was one of the most hotly debated issues at the 1994 annual meeting, where delegates cited a number of reasons to deunify, including philosophical differences with the AMA, declining membership, and the costs involved with joining the county, state, and national federation. Advocates—who won the vote—countered by saying unification was "critical" to the well-being of the profession.

The board's most recent action will provide the opportunity for timely action on deunification should the House of Delegates support such a move in October. The board will consider its position on the issue at its September meeting.

SOCIETY SUPPORTING PEDIATRIC PROGRAM

The Pennsylvania Medical Society will lend its support to the Pennsylvania Academy of Pediatrics' Educating Physicians in Their Communities Program—a public health program offering continuing medical education (CME) credit.

The program seeks "to improve the health care of children through practical, community-based, quality medical education to primary care providers and their medical and office personnel," according to the academy. Specific goals are to:

- develop a network of community pediatricians who can present medical education to the health care providers in their communities,
- provide practicing primary care physicians and other providers with quality, practical education in their own communities,
- improve the access and quality of health care for children with special health care needs and their families, and
- provide primary health care providers for children with links to the early childhood and early intervention service providers within their communities.

The academy requested the Society's endorsement to draw more physicians into the program. The Society's Council on Education and Science in turn requested board endorsement of the project, saying it "provides a good CME opportunity dealing with an important topic."

The academy requested the Society's endorsement to draw more physicians into the program. The Society's Council on Education and Science in turn requested board endorsement of the project, saying it "provides a good CME opportunity dealing with an important topic."

MEMBER INPUT SOUGHT ON PATIENT INTERFERENCE CASES

The Society's House of Delegates in October 1994 referred to the board a resolution calling for a study of cases in which insurance companies have interfered with patient care. The board in March approved two actions to implement the resolution.

First, the Society will publish articles in several consecutive issues of *PENNSYLVANIA MEDICINE* and *Executive Report* soliciting input from members on managed care payer interference. Accompanying the article is a Quality Alert Form for members to use to report cases of interference in patient care. This initiative begins this month in both publications. See pages 18-19.

Also, the Society will notify the AMA of these efforts and request its assistance in supplying additional information to support the Society's efforts.

The Society will use the real-life examples provided by members and the AMA to support legislative and regulatory managed care safeguards. Plans are to eventually request meetings with Pennsylvania's new insurance commissioner and secretary of health to discuss corrective safeguards.

LOBBYING EFFORT TO FOCUS ON CANCER SCREENING

At the recommendation of the Interspecialty Section, the board endorsed the concept of colorectal cancer surveillance, and agreed to pursue mandatory coverage for such surveillance in health care and health insurance reform legislation as it evolves in the Pennsylvania legislature and the U.S. Congress.

In 1994, the Society actively supported similar legislation to mandate insurance coverage of colorectal cancer screening, among other services. The bill unanimously passed the Senate, but was never considered by the House of Representatives.

The Society maintains that such a law would increase the incidence of colorectal screening, resulting in a higher percentage of cures by early detection and surgery. It also notes that the surveillance is consistent with recommendations of the U.S. Preventive Services Task Force.

The Society, in addition to planning its lobbying strategy, is preparing for strong opposition to such legislation from the insurance industry.

Board Votes to Support Goals of Physician-Owned Managed Care Organization

The State Society's board at its March meeting approved recommendations: 1) to fully support and endorse the goals of the Pennsylvania Physician Healthcare Plan, Inc. (PPHP), which aims to be Pennsylvania's first physician-owned managed care organization; and 2) to continue discussions with PPHP leadership in evaluating how the Society and its subsidiaries can assist and coordinate efforts with PPHP.

An interview with PPHP founder Gary Brown, MD, begins on page 14 of this issue. Details of the relationship forming between PPHP and Infinity Management Services, Inc.—a subsidiary of the Pennsylvania Medical Society Liability Insurance Company (PMSLIC)—is slated to appear next month in *PENNSYLVANIA MEDICINE*.

Veterans' Health Care: Lessons for Care Planners

Maureen Hoepfer

Integrated care is a popular trend in today's health care marketplace. In this article, the former Pennsylvania secretary of health, now chief of staff at the Lebanon VA Medical Center, H. Arnold Muller, MD, describes a model integrated health care system which has been operating for almost 50 years—the medical centers run by the U.S. Department of Veterans Affairs.

As legislators, government officials, and health care providers continue the debate over the best way to reform the nation's health care system, H. Arnold Muller, MD, believes health care planners can learn some lessons from the medical system run by the U.S. Department of Veterans Affairs (VA).

"The VA operates the only fully integrated national health care system in the United States," says Dr. Muller. "It is composed of medical centers, outpatient clinics, nursing homes, and community domiciliaries. The system also provides health care across a wide range of modalities of care, including preventive, acute inpatient, subacute and chronic inpatient, ambulatory, tertiary, nursing home, and hospice care. The VA provides one of the best health care bargains now available."

The American College of Physicians' 1990 position paper, "Access to Health Care," points to the VA as an example of a system which has been able to care for a large population, while at the same time controlling the costs of that care.¹

In the past decade, when health care costs in the private sector increased at a rate that greatly exceeded the rise in the consumer price index, the VA inflation-adjusted budget remained nearly flat. The efficiency of the VA during this period can be seen in the markedly reduced average length of stay on acute medical and surgical services, which allowed for an increase in the total number of patients treated.²

The veteran population

According to Dr. Muller, the VA serves a veteran population totaling more than 24 million. Of these, about 25,000 served during World War I, eight million are World War II veterans, 4.7 million served during the Korean War, 8.3 million fought in Vietnam, one million served in the Persian Gulf, and six million are peacetime vets. (Some veterans served in more than one conflict.)

On average, the VA directly cares for about four million of the 24 million veterans. This means the majority of veterans seek medical help in the private sector. "Overall, the number of veterans is decreasing, but the older veteran group [age 65 and over] is increasing numerically and will reach 120 percent of the total number over the next 10 to 20 years," he says.

The aging of the veteran population means that VA medical centers have a skewed patient mix, when compared with most other health care facilities in the United States. Dr. Muller says, "Our patients tend to be older and sicker, and many are indigent or fall close to the poverty line."

Veterans age 50 and over are often afflicted with dementia, strokes, cardiovascular disease, peripheral vascular disease, diabetes, cancer, liver disease, and nutritional deficiencies. The most frequent problems encountered among the younger vets (age 50 or less) are substance abuse, depression, post-traumatic stress disorder, and AIDS. "Both groups show a disproportionate number of pulmonary diseases because many veterans smoke heavily," he adds.

Several disease states affecting veterans may not be readily recognized by physicians as service related, Dr. Muller says. These include depression, post-traumatic stress disorder, substance abuse, AIDS, and Persian Gulf syndrome.

Post-traumatic stress disorder (PTSD), in particular, has been classified in the American Psychiatric Association's *Diagnostic and Statistical Manual of Mental Disorders* as an anxiety disorder in which

Ms. Hoepfer is a marketing associate for the Society's Educational and Scientific Trust. This article is one of a series, begun in January 1993 and ongoing through 1995, sponsored by the Trust's endeavor to address public health needs, Keystones of Public Health. H. Arnold Muller, MD, who is featured in this article, serves on the Keystones Steering Committee.

"the essential feature is the development of characteristic symptoms following a psychologically traumatic event that is generally outside of the range of human experience."³ PTSD may cause a wide variety of physical and emotional symptoms, including recurrent recollections or dreams about the event, depression, irritability or emotional outbursts, inability to sleep, difficulty in concentrating, and gastrointestinal or musculoskeletal disorders.

"Physicians treating veterans should be aware that a patient's substance abuse problem may reflect underlying PTSD," Dr. Muller says. "Also, this syndrome not only affects Vietnam vets; World War II and Korean veterans may have PTSD. For example, recently I treated a 61-year-old man who was still having debilitating flashbacks from a World War II experience when he was only 18."

Persian Gulf syndrome is an ill-defined illness that affects some of those who served during Desert Storm. It is characterized by a variety of symptoms, including skin rashes, changes in bowel habits, fever, malaise, and weight loss.

The VA system

To care for its huge patient load, the VA operates a health care system with facilities in all 50 states. It is composed of 171 medical centers, 355 outpatient clinics, 130 nursing homes, and numerous community domiciliaries.⁴ Pennsylvania has nine VA medical centers and several VA clinics.

The VA is an integrated system whereby patients can move from one setting to another—from acute care to long-term care facilities—and also incorporates unique features that set it apart from private sector health care systems or facilities:

- *Dental Services*—Unlike most hospitals, VA medical centers have full-time dentists on staff and often offer outpatient dental services at VA clinics.
- *Hospice Units*—Because many veterans treated at VA medical centers are older, indigent, and alone, most centers have hospice units on site.
- *Nursing Homes*—For the reasons cited above, many VA medical centers also operate on-site long-term nursing care facilities.
- *Substance Abuse Centers*—VA medical centers often have extensive substance abuse treatment (including acute detoxification capabilities) and rehabilitation programs.
- *Chaplains*—The VA employs full-time chaplains. These chaplains often take on additional responsibilities which complement those of social workers or psychologists.
- *Psychiatric Services*—Although most VA medical centers are not primarily psychiatric facilities, they do have sizable inpatient psychiatry services. For example, the Lebanon VA hospital has 150 beds reserved for psychiatric patients.
- *Geriatric Care*—One of the VA's most notable programs is geriatric care. This →

Pennsylvania's VA Medical Centers—A Valuable Resource

Physicians evaluating patients who are veterans may contact any of the nine VA medical centers in Pennsylvania for consultations or referrals (see list below). Two of the facilities—Coatesville and Pittsburgh Highland Drive—are psychiatric hospitals; the other seven are general hospitals, with the Philadelphia VA Medical Center and Pittsburgh University Drive VA offering tertiary care services. All but two of the centers have affiliations with medical schools.

The VA medical centers will evaluate and treat anyone who has served in the military. However, only certain categories of veterans under law are eligible for free VA care: former prisoners of war, World War I vets, low-income veterans, those with service-connected disabilities, veterans with Agent Orange exposure, those receiving a veterans' pension, and servicemen alleging exposure to ionizing radiation (Hiroshima, Nagasaki, and western United States).

Veterans not eligible for free care may choose to be treated at a VA medical center, but must pay for a small portion of their care. To determine eligibility, physicians should advise patients to contact their local VA medical center and ask to speak with the eligibility clerk. The referring physician may also call the local VA hospital's admitting physician or the appropriate referral service (i.e., medicine, surgery, psychiatry, etc.). Staff at VA medical centers are also available to speak to physician groups about the VA health care system. Call your local VA hospital and ask for the public relations office.

Something to Send for...

The Educational and Scientific Trust of the Pennsylvania Medical Society, under contract with the Pennsylvania Department of Health, researched and wrote a booklet for physicians on the health problems of Vietnam veterans. The book includes clinical information on chemical exposure, bacterial and parasitic infection, and the psychological problems that physicians should take into account when examining patients who served in Southeast Asia.

To obtain a free copy, write to the Pennsylvania Vietnam Veterans Health Initiative Commission, Pennsylvania Department of Health, PO Box 90, Room 1000 Health and Welfare Building, Harrisburg, PA 17108.

program has played a major role in the development of geriatric care nationally.⁵ For example, the VA pioneered inpatient geriatric evaluation management units (GEMs), and the VA Office of Geriatrics has been responsible for such innovative programs as hospital-based home care teams, contracted adult day care, and Geriatric Research, Education, and Clinical Centers (GRECCs).

In addition, Dr. Muller says, the VA in recent years has been experimenting with several types of community living arrangements for veterans suffering from substance abuse or chronic physical or mental illness. The Lebanon VA Medical Center, for example, owns a home and leases a portion of a building in downtown Lebanon which are used for veterans recovering from substance abuse.

"Keeping these patients in the hospital reinforces the idea that they are sick when they are not," Dr. Muller explains. "We start them out with compensated work therapy here at the hospital and then graduate them to community living arrangements. They are taught skills that they can eventually sell to society in terms of having a trade. Our goal is to make them productive members of the community."

Another VA community living arrangement involves veterans who have chronic illnesses and are unable to work. The VA contracts with local citizens to care for one or more veterans in their homes. These veterans "pay their way" in this arrangement by using their government pensions. "This approach, for the most part, constitutes a win-win situation for both parties. The vet profits from living in a more caring, normal setting, and the community benefits from the payments the caregivers receive from the veterans."

VA/medical affiliations

In its 1990 position paper, the American College of Physicians applauded the Veterans Administration's success in establishing strong affiliations with medical schools. The authors describe the critical role the VA plays in medical education and recommend the VA policy encouraging these affiliations be emulated in future models of national health care.⁶

Currently, 104 of the 126 medical schools in the United States have VA affiliations, and over half of all U.S.-educated physicians received some training at VA medical centers.⁷

The VA/medical connection has major benefits for both parties, according to Dr. Muller. These affiliations help the VA health care system meet three of its major

goals, i.e., providing patient care, participating in undergraduate and postgraduate medical education, and conducting biomedical research.⁸ For example, because most members on VA medical staffs hold academic appointments at affiliated universities, the medical centers are able to attract more highly qualified physicians.

Universities, in turn, benefit from access to a large patient population for teaching and clinical research, as well as from expanded funds for faculty salaries, postgraduate training programs, and research.⁹ Nearly 12 percent of all residencies (excluding pediatrics and obstetric/gynecology) in the U.S. are funded by the VA, and a significant portion of the nation's investment in medical research (\$212 million in fiscal year 1991) is derived from VA appropriations.¹⁰ "There is no doubt that this partnership strengthens both the VA and its academic affiliates," Dr. Muller observes.

Future trends

The VA, as are all other elements of the U.S. health care system, is adapting to the "changing health care scene," according to Dr. Muller. "The system is decentralizing, and much more decision-making authority and responsibility will be vested at the local level," he explains.

In the near future, the VA health care system will be reorganized into Veterans' Integrated Service Networks (VISNs), Dr. Muller says. Each network will include four to 11 VA medical centers which will integrate services. One VISN will include the nine VA medical centers in Pennsylvania, plus the Clarksburg (West Virginia) VA Medical Center and the Wilmington (Delaware) VA Medical Center.

According to Dr. Muller, in the coming years most VA medical centers will be developing more outreach programs to provide primary care to veterans in their communities. This could involve establishing VA-staffed clinics, contracting with primary care providers for services, and developing clinics in cooperation with university affiliates. "The result," he says, "should be more proximate and more responsive health care for veterans."

Dr. Muller believes the VA health care system can serve as a model for national health system reform. "No other health care system has been built around the concept of providing high quality health care for America's veterans—health care that is provided with compassion and caring." ◊

With disability insurance this affordable, can you afford to be without it?

Your ability to earn an income is your most precious asset. So if you've been putting off disability coverage because it's too costly or difficult to find, here's good news:

You can now protect yourself and your family with top-quality disability coverage through the Pennsylvania Medical Society and its endorsed broker, Colburn-Bertholon-Rowland (CBR). And thanks to the society's purchasing power, you can select between non-cancelable or guaranteed renewable

policies, at highly affordable group rates.

When you choose CBR, you'll be covered by a carrier rated "A" or better by A.M. Best Company. And, you will have the added advantage of being insured for your "own occupation".

You'll also enjoy the convenience of working with CBR, a company that has been serving the insurance needs of Pennsylvania professionals for over 65 years.

Ignore Mergermania; Find Your Niche

Downsizing: An Alternate Solution to Managed Care Woes

Faced with the increased pressure of managed care in Pennsylvania, many medical practices see only one answer—increasing market share. To gain market share, many physicians are considering merger, when, in reality, downsizing may be a smarter move.

"Mergermania" has captured the imagination of the media, which naturally focus on the "hottest" stories: those that generate the most emotional response. As they are continually warned that they must do *something* to survive in the precarious environment, some practitioners forget that the obvious answers are not always the same as the sensational issues covered by the medical press.

If you are looking into merger simply because everyone else is, then also investigate the possibility of downsizing into a niche practice. For many practices, bigger is not better; it is worse, and it means more work. While smaller practices may have less bargaining power with hospitals and other large players, by picking the right niche, you may gain advantages in cost effectiveness or because the services you provide—or the way you provide them—are unique.

Often, downsizing means returning to your original practice goals, which may not include the hassles of working in a large group, but may well include managing your own business.

In small practices, expenses are generally more controllable. Larger is not better for everyone. Bigger practices, which are more costly to manage, often do not benefit from economies of scale the way traditional businesses do. Also, you may not need to provide the entire range of services that you now do. You may be able to trim your range of services, reduce your overhead, and work smarter. Know what you want and go after it.

Focus on services

Start by focusing on the services you provide. Must you "cover all the bases?" Perhaps, for example, you are practicing as a pediatrician/allergist. Focus on your mission. Ask "Do I need to provide allergy testing and shots as a pediatrician? Does providing allergy testing really enhance my pediatric practice? At what cost? At what benefit? How often do my patients use these services?"

If you are part of an ENT group, providing hearing aids could be lucrative—keep that service. But you may be losing money, or not making very much, by providing ENGs. Can you send your patients to the hospital for them? If so, what is the cost? The benefit? How many patients, if any, would leave your practice if you stopped providing this test in the office?

You may have a satellite office that costs you more to run than you earn from seeing patients there. You could earn the same income by seeing those patients at your central office, and you would eliminate the additional overhead expenses—travel, lease payments, additional staff—associated with the satellite. Be sure, however, to thoroughly account for all revenues generated by the satellite, including procedures in your main office.

If you are an older practitioner considering a phase-out in the foreseeable future, strongly consider downsizing. To be prudent, also consider the possible effects of downsizing on your practice's goodwill value. If you do downsize, then, whether you actually sell your practice or not when the time comes to retire, you can ease your way out by relying on strong professional relationships with other physicians who will provide more care to your patients as you provide less. If you have good legal advice, you can easily do this without invoking Stark II or other anti-kickback laws.

Fewer physicians?

Occasionally, a group practice may find that it has effectively identified its niche. The physicians are comfortable with their niche. Still, lower revenues are a fact of life, and this five-doctor practice should really have only four or three physicians to maximize physician efficiency.

Tough choices are in order. You are partners; you can fire staff, but not one another. It may be time to sit down as a group and decide that one or two of you should leave. Families are involved, and there may be some struggling ahead, so your group discussions should remain as cordial and supportive as possible.

Investigate all your options:

- Is early retirement in order for someone?
- If one or two of the younger doctors want to be more aggressive—offer more services, work more hours, contract with more health care plans—perhaps they should work toward those ends by striking out on their own.
- Maybe your Philadelphia or Pittsburgh practice is increasingly less attractive to one or two of you. Can you find more happiness in Easton, Altoona, or another smaller city or town?

This type of splintering of a group is rare. If the members of your group practice would rather suffer together than prosper separately, you could simply allow income levels to drop without taking any kind of proactive measure.

You may decide to subcontract or subcapitate services to another practice. For example, your group may propose to do all the gastrointestinal work for a large primary care practice with a number of large managed care contracts.

If your group's philosophy is that it is unnecessary to be all things to all people, or to enlarge or merge, or to take on mountains of risk in return for big payoffs, you can indeed find your own niche and prosper in it.

The Educational and Scientific Trust of the Pennsylvania Medical Society provides you with a way to make a significant statement honoring the memory of and paying tribute to your colleagues who are deceased.

Send your tax-deductible memorial gift to The Educational and Scientific Trust of the Pennsylvania Medical Society, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

It's YOUR money. Why wait?

Electronic Submission of Insurance Claims...

Electronic claims processing will cost the health care provider less than paper claims. The average doctor spends from \$7.00 to \$14.00 processing each claim by paper. However, **Medical Billing Professionals'** fee is only \$2.00 per claim. If your practice processes on average more than 750 claims per month, bulk rate fees are available which could reduce your fee to only \$1.50 per claim.

Electronically submitted claims are paid within 5-21 days of receipt by the insurance company, far less than the average 30-60 days for manually processed claims.

MEDICAL BILLING PROFESSIONALS will follow up with the insurance company any claim not processed within thirty days of submission *at no additional charge*. **Medical Billing Professionals** will process your first 100 claims *for free* if you mention this ad.

CENTER COMPLETES FIRST SET OF DRUG PROFILES

The Society's Center for Professional Drug Education and Information has completed the first classification of drug profiles, H₂ Antagonists, for Medicaid retrospective drug utilization review. The profiles are based on prescription drug claims filed for a specific patient and identify problem areas such as therapeutic duplication, disease/drug interactions, drug-drug interactions, and over utilization. The response has been interesting.

Physicians for the most part were grateful for the information and found it to be useful. In many instances, they were unaware that the patient was taking all the medications noted on the profile. In those cases where the physician took issue with the profile because he or she felt the case history warranted the therapy prescribed, he or she was reassured that the process was both informational and educational, not punitive in nature. Final results are still pending.

Your Comments Are Welcomed

The Society's Center for Professional Drug Education and Information welcomes your questions and comments about issues relating to prescribing, drug interactions, or specific pharmaceuticals. Use this form to fax your questions and/or comments.

Fax

Fax to Barbara Layne at (717) 558-7848.

Or mail to the Center at P.O. Box 8820, Harrisburg, PA 17105-8820

To date, the response rate for returned alert letters is 61.1 percent. This rate far exceeds the average of approximately 30 percent for other states. The Center hopes physicians will continue this outstanding response so we can demonstrate that physicians are concerned. Education is the way to enhance prescribing decisions.

The second classification of drug profiles is now in progress and will survey anti-depressants. Criteria for the classification has been formally reviewed by the Psychiatric Physicians of Pennsylvania and the state's Drug Utilization Review Board. Recipient profiles for this classification of drugs will be reaching physician offices in June. We ask that if you receive a profile,

please take time to review the contents and respond. Your input is necessary for the program to be successful.

Resources

The newest drug cost comparison wall charts and pocket cards are fresh off the press. Available are charts and cards for ACE Inhibitors, H₂ Antagonists, Beta Adrenergic Blockers, and Centrally and Peripherally Acting Antiadrenergic agents, as well as updates for the existing cards.

Physicians on our mailing list will receive this information shortly. If you wish to receive these materials and have not added your name to our mailing list, please call the Center at (800) 228-7823.

Q&A: Drug Utilization

The Center for Professional Drug Education and Information receives numerous inquiries from physicians about drug interactions, side effects, and other drug-utilization issues. In an effort to share this information, the Center selects a question of general interest to appear in this column each month. The response, prepared by our clinical pharmacist, Brenda Trimmer, RPh, FASCP, is based on an abstract of the latest scientific literature that has been developed with input and knowledge of experienced clinicians. If you have a question that you think would be of general interest, please contact the Center at (800) 228-7823.

Q: Can you provide information regarding low-molecular-weight heparin?

A: Enoxaparin is the first low-molecular-weight heparin marketed in the United States. It is currently approved only for the prevention of deep vein thrombosis, which may lead to pulmonary embolism following hip replacement. The trade name is Lovenox®, manufactured by Rhone-Poulenc Rorer. The dosing recommendation is a fixed dose of 30 mg subcutaneously twice a day. Patients with known hypersensitivity to heparin or pork products should not be treated with enoxaparin. Lovenox is not intended for IM or IV administration. Treatment should be continued throughout the postoperative care period until the risk of DVT has diminished. The average duration of administration is seven to 10 days. There is usually no need for daily monitoring of the effect of enoxaparin in patients with normal presurgical coagulation parameters. The most serious adverse reaction associated with enoxaparin therapy is bleeding, which may involve minor bleeding or frank hemorrhage. If bleeding is serious, enoxaparin therapy should be discontinued, and protamine can be administered as an antagonist. Recent journal articles on enoxaparin from *JAMA*, *Archives of Internal Medicine*, *The Journal of Bone and Joint Surgery*, *New England Journal of Medicine*, and *Lancet* are available from the Center's library. Call (800) 228-7823 for more information.

New Therapeutic Agents Marketed in 1994

This is the second and final in a series of articles overviewing new drugs approved and marketed in the U.S. in 1994.

Daniel A. Hussar, PhD

A total of 21 therapeutic agents reached the U.S. market for the first time in 1994, representing a continuation of the decline from the record number of 31 new therapeutic agents which were marketed in 1991. This review of the therapeutic agents first marketed in 1994 considers their most important properties. When additional information is needed, more comprehensive references and the product literature should be consulted.

IMMUNOSUPPRESSANT

Tacrolimus (Prograf-Fujisawa), previously known as FK506, is an immunosuppressant with properties that are most similar to those of cyclosporine (Sandimmune). It is indicated for the prophylaxis of organ rejection in patients receiving allogeneic liver transplants, and it is recommended that the new drug be used concomitantly with an adrenal corticosteroid.

The efficacy and safety of tacrolimus following liver transplantation were assessed in two studies which included active control groups treated with a cyclosporine-based immunosuppressive regimen (CBIR). The one-year patient survival and graft survival in the tacrolimus-based treatment groups were similar to those in the CBIR treatment groups. Tacrolimus may be effective in preventing rejection in liver transplant patients who fail cyclosporine or other immunosuppressive treatment, and the new drug represents an important and in some patients life-saving addition to the small group of immunosuppressive agents.

Preliminary investigations indicate that tacrolimus is also effective in preventing rejection of kidney, heart, and pancreas transplants. However, these are not labeled indications at the present time. The labeled indications for cyclosporine include prophylaxis of rejection of kidney and heart transplants, as well as liver transplants.

Many of the adverse reactions experienced with the use of tacrolimus are the same as those associated with cyclosporine and occurred at a similar or slightly higher frequency with tacrolimus. As with cyclosporine, nephrotoxicity is an important concern with the use of tacrolimus and was observed in 40 percent of patients. It should not be used concurrently with cyclosporine, and it is recommended that tacrolimus or cyclosporine should be discontinued at least 24 hours prior to initiating the other. Other commonly reported reactions include tremor (56 percent), headache (64 percent), hypertension (47 percent), hyperkalemia (45 percent), hyperglycemia (47 percent), diarrhea (72 per-

cent), nausea (46 percent), abdominal pain (59 percent), and asthenia (52 percent).

A few patients receiving tacrolimus injection have experienced anaphylactic reactions. The parenterally administered formulation of tacrolimus contains polyoxyl 60 hydrogenated castor oil (HCO-60) as a solubilizing agent. Although the exact cause of the anaphylactic reactions is not known, it is likely that they are due to the castor oil derivative rather than tacrolimus. A similar situation is seen with the parenteral formulation of cyclosporine that also contains a castor oil derivative. Because of the risk of anaphylaxis, tacrolimus injection should be used only in patients who are unable to take the capsule formulation.

Like cyclosporine, tacrolimus is extensively metabolized in the liver, primarily by the cytochrome P-450 enzyme system. Tacrolimus blood concentrations may be increased by other drugs that inhibit these enzymes (e.g., diltiazem [Cardizem], ketoconazole [Nizoral], cimetidine [Tagamet], erythromycin) and decreased by other drugs that increase the action of these enzymes (e.g., phenobarbital, phenytoin [Dilantin], rifampin [Rifadin, Rimactane]).

Whereas the use of cyclosporine is initiated four to 12 hours prior to the transplantation procedure, the initial dose of tacrolimus should be administered no sooner than six hours after transplantation. When administered orally, tacrolimus is administered in two divided daily doses every 12 hours. Cyclosporine is usually administered once a day. Tacrolimus capsules are supplied in 1- and 5-mg potencies. The injection is supplied in 1-ml ampules containing 5 mg of tacrolimus.

ANTIHISTAMINE

Acrivastine/pseudoephedrine hydrochloride (Semprex-D-Adams; Burroughs Wellcome) represents a combination of a new antihistamine and an "old" decongestant. Acrivastine is not available as a single agent, but only in the combination formulation that is indicated for the relief of symptoms associated with seasonal allergic rhinitis (hay fever) such as

sneezing, rhinorrhea, pruritus, lacrimation, and nasal congestion.

Acrivastine is a structural analog of triprolidine (the antihistamine component of Actifed) and exhibits histamine H₁-receptor antagonist activity. Like triprolidine, but unlike other newer antihistamines (terfenadine [Seldane], astemizole [Hismanal], loratidine [Claritin]), acrivastine causes somnolence (i.e., drowsiness, sedation, sleepiness) in a number of patients. Patients should be advised to determine their individual response to the medication before engaging in activities requiring mental alertness such as driving a car or operating machinery. The concurrent use of alcohol or other central nervous system (CNS) depressants may cause additional impairment of CNS performance and should be avoided.

The precautions to be observed with the use of acrivastine/pseudoephedrine are similar to those of the related, previously marketed products (e.g., Actifed) and, for the most part, are associated with the pseudoephedrine component of the combination. Its use is contraindicated in patients taking a monoamine oxidase inhibitor (MAOI) and for two weeks after stopping use of a MAOI because of the risk of serious reactions (e.g., hypertensive crisis). Patients should be advised against the concurrent use of the new product with non-prescription antihistamines and decongestants.

Semprex-D capsules contain 8 mg of acrivastine and 60 mg of pseudoephedrine hydrochloride. The recommended dosage for adults and children 12 years and older is one capsule every four to six hours four times a day. The short duration of action and need to administer the product four times a day are disadvantages when the new product is compared with certain other formulations that have a longer duration of action and more convenient dosage regimens.

AGENT FOR RHINITIS

Budesonide (Rhinocort-Astra) is an anti-inflammatory corticosteroid that is administered by nasal inhalation for the management of symptoms of seasonal or perennial allergic rhinitis in adults and children, and nonallergic perennial rhinitis in adults. It is the fifth corticosteroid to be administered locally in the treatment of allergic or inflammatory nasal conditions, joining beclomethasone dipropionate (Beconase, Beconase AQ, Vancenase, Vancenase AQ), dexamethasone sodium phosphate (Dexacort), flunisolide (Nasalide), and triamcinolone acetonide

(Nasacort). In early 1995, a sixth corticosteroid, fluticasone propionate (Flonase), was marketed in a formulation for nasal administration.

The adverse reactions most often associated with the use of budesonide are symptoms of irritation of the nasal mucous membranes and include nasal irritation (four percent); epistaxis and/or bloody mucus (four percent); sneezing after use of nasal inhaler (two percent); and nasal dryness, soreness, and stinging/itching (each one percent). However, each of these reactions was reported at a similar or greater frequency in the patients receiving placebo, suggesting the possibility that the vehicle or the rhinitis itself was responsible for the symptoms. Only about 20 percent of an intranasal dose of budesonide reaches the systemic circulation, and the drug is rapidly and extensively metabolized in the liver. Systemic adverse effects are unlikely to occur when budesonide is used in the recommended dosage.

Budesonide nasal inhaler is a metered-dose, pressurized aerosol unit containing a suspension of micronized drug in a mixture of propellants. Although budesonide appears to be well tolerated, some have suggested that similar formulations in which the corticosteroid is suspended in propellant mixtures or other non-aqueous media (e.g., the Beco-nase and Vancenase formulations of beclomethasone dipropionate) may be more likely to cause nasal irritation than aqueous formulations (e.g., Beco-nase AQ and Vancenase AQ formulations of beclomethasone dipropionate).

The recommended starting dose of budesonide in adults and children six years of age and older is 256 µg daily, given as either two sprays in each nostril morning and evening or as four sprays in each nostril in the morning. Following the initiation of treatment, a decrease in symptoms may occur as soon as 24 hours; however, generally it takes three to seven days to reach maximum benefit.

ANTIASTHMATIC AGENT

Salmeterol xinafoate (Serevent-Allen and Hanburys) is a selective beta₂-adrenergic receptor agonist that is administered by oral inhalation in the treatment of asthma. It is structurally similar to albuterol (Proventil, Ventolin), but has a considerably longer duration of action following oral inhalation (about 12 hours in most patients). The new drug is indicated for long-term, twice-daily (morning and evening) administration in the maintenance treatment of asthma, and in the prevention of bronchospasm in patients 12 years of age and older with reversible obstructive airway disease, including patients with symptoms of nocturnal asthma who require regular treatment with inhaled, short-acting beta₂-adrenergic agonists. Because of its long duration of action, salmeterol may be particularly useful in patients with nocturnal asthma, and the reduction of symptoms can be expected to improve sleep quality. The twice-daily dosing regimen with salmeterol may also enhance compliance.

Salmeterol is also indicated for prevention of exercise-induced bronchospasm in patients 12 years of age and older. Again, the long duration of action can be advantageous, especially in asthmatics who engage in sustained exercise.

Salmeterol has a slow onset of action (usually 15 to 20 minutes) in comparison to the other inhaled beta₂-adrenergic agonists and must not be used to treat acute symptoms. When salmeterol is prescribed, patients must also be provided with a short-acting, inhaled beta₂-adrenergic agonist (e.g., albuterol) for the treatment of acute symptoms that occur despite twice-daily use of salmeterol.

Those patients who have already been taking a short-acting, inhaled beta₂-adrenergic agonist on a regular daily basis should be advised to discontinue their regular daily-dosing regimen and instructed to use the short-acting agent only for symptomatic relief if they develop acute asthma symptoms while using salmeterol. It is essential that patients be carefully instructed regarding the appropriate use of salmeterol, as well as the appropriate use of the short-acting beta₂-adrenergic agonist that provides a rapid onset of action when administered by oral inhalation for the treatment of acute symptoms.

The most common adverse reactions considered to be related to the use of salmeterol during clinical trials were headache (10 percent), tremor (three percent), cough (three percent), and dizziness (two percent). These effects were experienced at about the same incidence in the patients receiving albuterol.

The recommended dosage of salmeterol in adults and children 12 years of age and older for maintenance of bronchodilatation and prevention of symptoms of asthma is two oral inhalations (42 µg) twice daily (morning and evening, approximately 12 hours apart). If symptoms arise in the period between doses, a short-acting, inhaled beta₂-adrenergic agonist should be taken for immediate relief, and the patient should not take higher doses of salmeterol (i.e., administration of doses more frequently than every 12 hours, or more than two inhalations per dose).

AGENT FOR CYSTIC FIBROSIS

The marketing of *dornase alfa* (Pulmozyme-Genentech) represents an important advance in the management of cystic fibrosis (CF) and has been described as the first new therapeutic approach in 30 years for this disorder. Its development made possible by the advances in biotechnology, the new agent is a recombinant form of natural human deoxyribonuclease I (also known as DNase or rhDNase), and it contains 260 amino acids in a sequence that is identical to that of the native human enzyme. Dornase alfa solution is administered by inhalation of an aerosol mist produced by a compressed air-driven nebulizer system. It acts like "molecular scissors" and selectively cuts extracellular DNA, making the thick secretions that clog the respiratory passages and are a "breeding ground" for bacteria less viscous and easier to clear.

Dornase alfa is indicated for daily use, in conjunction with standard therapies, in the management of CF patients to reduce the frequency of respiratory infections requiring parenteral antibiotics and to improve pulmonary function. Although it is not a cure for CF and does not replace current therapies, dornase alfa has, in many patients, reduced the risk of respiratory tract infection and the subsequent need for and cost of parenteral antibiotic therapy, hospitalization, and other related health care services. Many patients with mild to moderate pulmonary dysfunction experienced an improvement in lung function as well as their quality of life, as evidenced by less breathlessness, coughing, and waking up in the middle of the night to cough and catch their breath. A reduction in the time missed from school, work, and other activities was also observed.

Dornase alfa inhalation solution is supplied in single-use ampules that contain 2.5 mg of the drug in 2.5 ml of a sterile aqueous solution. The recommended dosage in most patients is 2.5 mg inhaled once daily using a recommended nebulizer. Some studies suggest that the drug may be less effective in older patients (over 21 years) than in younger patients and that twice-daily dosing may be required in the older patients.

ANTIEMETIC AGENT

Granisetron hydrochloride (Kytril-SmithKline Beecham) is a selective antagonist of 5-hydroxytryptamine₃ (5-HT₃) receptors and has properties that are most similar to those of ondansetron (Zofran). It is indicated for intravenous administration for the prevention of nausea and vomiting associated with initial and repeat courses of emetogenic cancer therapy, including high-dose cisplatin (Platinol).

In the three years in which it has been available in the United States, ondansetron has proven to be a highly effective and well tolerated antiemetic agent. In comparative studies, granisetron appears to be at least as effective; however, in some of these investigations, the doses used were different than those recommended in the product labeling. Since its introduction, ondansetron has also been approved for postoperative nausea and vomiting, and in a tablet dosage form for oral use. It can be expected that, as additional studies with granisetron are completed, its labeled indications will expand, and an oral dosage form will be approved.

The recommended dosage of granisetron is a single 10 µg/kg dose infused intravenously over five minutes, beginning within 30 minutes before initiation of chemotherapy and only on the day(s) chemotherapy is given. In many patients a single dose of granisetron is effective over a period of about 24 hours which is of benefit in preventing the nausea and vomiting that may occur late in the first 24 hours with agents such as intravenously administered cyclophosphamide (Cytoxan). However, during clinical trials, some patients needed a second dose after 14 to 18 hours.

Single-use vials are supplied that contain granisetron hydrochloride in an amount equivalent to 1 mg of granisetron per ml.

ANTINEOPLASTIC AGENT

The formulation of the enzyme L-asparaginase (Elspar) that has been marketed for a number of years is derived from *E. coli*. Although this product has been used effectively, primarily in combination regimens for the treatment of certain leukemias in children, it has several important limitations including a risk of severe hypersensitivity reactions (reported in the literature in three percent to 73 percent of patients), a short duration of action, and the potential for resistance to its action as a result of the development of anti-asparaginase antibodies.

Pegaspargase (Oncaspar-Enzon; Rhone-Poulenc Rorer) is a modified form of L-asparaginase (*E. coli* derived) that is produced by covalently conjugating units of monomethoxypolyethylene glycol (PEG), molecular weight of 5,000, to the enzyme. In this "pegulation" process, the PEG is conjugated to asparaginase at sites not involving the active site of the enzyme. This enables free access of asparaginase to the active site of the enzyme, thereby preserving the therapeutic activity of the enzyme. In addition, the immunogenicity of pegaspargase is substantially lower than that of native asparaginase, and the plasma half-life of the new agent is significantly longer.

Pegaspargase is indicated for patients with acute lymphoblastic leukemia (ALL) who require L-asparaginase in their treatment regimen, but have developed hypersensitivity to the native forms of L-asparaginase. It is generally used in combination with other chemotherapeutic agents such as vincristine (Oncovin), methotrexate, cytarabine (Cytosar-U), daunorubicin (Cerubidine), and doxorubicin (Adriamycin). The use of pegaspargase as a single agent should only be undertaken when multi-agent chemotherapy is judged to be inappropriate for the patient. The effectiveness of pegaspargase has been demonstrated to be similar to that of native asparaginase. It has been effective and tolerated in some patients whose previous hypersensitivity reactions to asparaginase were sufficiently severe that they would not have been able to receive any further treatment.

Pegaspargase may be administered by either the intramuscular or intravenous route. However, the intramuscular route is preferred because of the lower risk of serious hypersensitivity and other adverse reactions. The incidence of hypersensitivity reactions when pegaspargase was administered intramuscularly (in studies involving 126 patients) was 30 percent in patients who were previously hypersensitive to native asparaginase and 11 percent in non-hypersensitive patients. Although pegaspargase is tolerated well by many patients who are hypersensitive to asparaginase, a risk of such reactions, including immediate and life-threatening anaphylaxis, exists with the use of the new drug. As a routine precaution, it is recommended

that patients be kept under observation for one hour.

Pancreatitis, sometimes fulminant and fatal, has been experienced by some patients (one percent) treated with pegaspargase, and the drug is contraindicated in patients with a history of pancreatitis. Frequent serum amylase determinations should be obtained to detect early evidence of pancreatitis. Thrombosis was experienced by four percent of the patients treated in the clinical studies, and the use of pegaspargase is contraindicated in patients who have had significant hemorrhagic events associated with prior asparaginase therapy. Mild to severe hyperglycemia has been experienced with the use of pegaspargase, and insulin therapy was required in three percent of the patients. Blood glucose determinations should be monitored during therapy.

Pegaspargase is administered every 14 days, and the prolonged duration of activity permits fewer and less frequently administered doses than with asparaginase. It is supplied in vials containing 3,750 IU of the drug (in 5 ml). The drug may be a contact irritant, and the solution must be handled and administered with care. The use of gloves is recommended.

AGENT FOR SEASONAL ALLERGIC CONJUNCTIVITIS

Levocabastine hydrochloride (Livostin-Iolab) is a histamine H₁-receptor antagonist that is indicated for topical ophthalmic use for the temporary relief of the signs and symptoms of seasonal allergic conjunctivitis. The new drug was demonstrated to be effective in most of the patients (about 90 percent) in the clinical studies and, in several studies, it was determined to be more effective than antihistamine-decongestant combinations and cromolyn sodium. Following ophthalmic administration, levocabastine has a rapid onset of action whereas the beneficial effects of other agents may not be experienced until several days after the initiation of therapy.

Levocabastine hydrochloride is supplied as an ophthalmic suspension that contains the drug in a concentration of 0.05 percent. Patients should be advised to shake the container well before administering the drug. The formulation contains benzalkonium chloride as a preservative. Because this agent may damage soft contact lenses, the new product should not be used while soft contact lenses are being worn.

AGENT FOR PSORIASIS

Calcipotriene (Dovonex-Westwood-Squibb) is a synthetic analog of vitamin D₃ that is indicated for the topical treatment of moderate plaque psoriasis. In a comparative study with fluocinonide (Lidex), calcipotriene was shown to be at least as effective as the corticosteroid, with improvement in the condition usually beginning after two weeks of therapy. This improvement with calcipotriene treatment continued with approximately 70 per-

cent of patients showing at least marked improvement after eight weeks of therapy; however, only approximately 10 percent showed complete clearing. As the first topical vitamin D₃ analog available for the treatment of psoriasis, calcipotriene offers an option that may be better tolerated than topical corticosteroids by some patients and better accepted than preparations such as coal tar formulations.

The adverse reactions reported most often with the use of calcipotriene are burning, itching, and skin irritation, which occurred in approximately 10-15 percent of patients. Calcipotriene is contraindicated for use on the face because of facial irritation observed in the early clinical studies, and patients should be advised to avoid contact of the medication with the face and eyes.

Approximately six percent of the applied dose of calcipotriene is absorbed systemically when the ointment is applied topically to psoriasis plaques. The new drug is considered to be 100 to 200 times less disruptive to calcium metabolism than natural vitamin D; however, hypercalcemia has been reported in less than one percent of patients. If an elevation in serum calcium outside the normal range should occur, treatment should be discontinued until normal calcium levels are restored.

Calcipotriene ointment contains the drug in a 0.005 percent concentration. A thin layer of the ointment is applied to the affected skin twice daily, and rubbed in gently and completely.

AGENT FOR GAUCHER DISEASE

Gaucher disease is a debilitating and sometimes fatal genetic disorder that is characterized by a deficiency of β -glucocerebrosidase, a "housekeeping enzyme" that catalyzes the breakdown of the glycolipid glucocerebroside. The deficiency of the enzyme results in accumulation of glucocerebroside in tissue macrophages which become engorged and are typically found in the liver, spleen, and bone marrow. Patients may experience anemia, thrombocytopenia, enlargement of the spleen and liver, and deterioration of bones leading to frequent fractures. It is estimated that approximately 2,000 Gaucher patients in the United States and another 3,000 worldwide have symptoms severe enough to require treatment with enzyme-replacement therapy.

The marketing of alglucerase (Ceredase), a modified form of β -glucocerebrosidase, in 1991 represented a very important advance in the treatment of Gaucher disease. However, the supply of this placenta-derived product is insufficient to meet the anticipated need, and other methods to produce the enzyme have been investigated. This research has resulted in the approval of imiglucerase (Cerezyme-Genzyme), an analog of β -glucocerebrosidase that is produced by recombinant DNA technology. Like alglucerase, imiglucerase is indicated for long-term enzyme replacement therapy for patients with a confirmed diagnosis of Type 1 Gaucher disease that results in one or more of the following conditions: ane-

mia, thrombocytopenia, bone disease, hepatomegaly, or splenomegaly.

Imiglucerase is administered by intravenous infusion over one to two hours, and the dosage should be individualized for each patient. It is supplied in vials containing 200 units of the drug. The initial supplies of imiglucerase are limited, and the drug is available only to patients who participate in post-approval clinical research that is designed in part to determine whether lower dosages are effective. Larger production facilities are currently under construction and, eventually, when sufficient supplies are available, all patients will be treated with imiglucerase, and the use of alglucerase will be discontinued.

AGENT FOR NEPHROPATHIC CYSTINOSIS

Nephropathic cystinosis is a rare inherited disorder characterized by the accumulation of cystine in lysosomes in the kidneys, as well as other tissues. The accumulation of cystine causes renal dysfunction, usually in early childhood, which progressively worsens to a point where dialysis or a transplant is neces-

sary at a median age of less than 10 years. Patients with cystinosis also experience slow body growth, weak bones, and photophobia due to cystine deposits in the cornea.

Cysteamine bitartrate (Cystagon-Mylan) is a cystine-depleting agent that lowers the cystine content of cells and is indicated for the management of nephropathic cystinosis in children and adults. Prior to the availability of cysteamine, renal transplantation was the only effective treatment for this disorder. The new drug may significantly increase both the duration and quality of life for patients with this disease, and it represents an important advance in the management of this condition. Cysteamine acts within lysosomes to convert cystine to cysteine and cysteine-cysteamine mixed disulfide, both of which, unlike cystine, can pass through the lysosomal membrane in patients with cystinosis. Following the administration of cysteamine, the white cell cystine levels fall, and these levels should be monitored every three months to determine the adequacy of dosing. The drug cannot reverse renal damage that has already occurred, but it can help prevent progressive worsening

of renal function and also decrease the amount of cystine in muscle and other tissues.

The adverse reactions most often experienced with the use of cysteamine include vomiting (35 percent), anorexia (31 percent), and rash (seven percent). If a rash develops, the drug should be withheld until the rash clears. If a severe skin rash (e.g., erythema multiforme) develops, cysteamine should not be readministered. The use of cysteamine is contraindicated in patients who have developed hypersensitivity to penicillamine (Cuprimine).

Once a diagnosis of nephropathic cystinosis is confirmed, cysteamine treatment should be initiated promptly. Patients should be started on one-sixth to one-quarter of the maintenance dose, with the dose raised gradually over four to six weeks to avoid intolerance. Cysteamine bitartrate is supplied in capsules which provide 50 mg and 150 mg of cysteamine base.

Dr. Hussar is Remington professor of pharmacy, Philadelphia College of Pharmacy and Science, Philadelphia.

New Therapeutic Agents Marketed in 1994—Part II*

Generic Name	Trade Name	Manufacturer	Therapeutic Classification	Dosage Form	FDA Classification**
Acrivostine/pseudoephedrine hydrochloride	Semprex-D	Adams; Burroughs Wellcome	Antihistamine/decongestant	Capsule	1,4-S
Budesonide	Rhinocort	Astra	Agent for rhinitis	Metered-dose inhaler for nasal administration	1-S
Calcipotriene†	Dovonex	Westwood Squibb	Agent for psoriasis	Ointment	1-S
Cysteamine bitartrate	Cystagon	Mylan	Agent for nephropathic cystinosis	Capsule	1-P,V
Darnose alfa†	Pulmozyme	Genentech	Agent for cystic fibrosis	Solution for nebulization	††
Gronisetrone hydrochloride†	Kytril	SmithKline Beecham	Antiemetic agent	Porenterol	1-S
Imiglucerase	Cerezyme	Genzyme	Agent for Gaucher disease	Parenteral	1-P,V,E
Levocabastine hydrochloride†	Livastin	Iolab	Agent for seasonal allergic conjunctivitis	Ophthalmic suspension	1-P
Pegaspargase	Oncospar	Enzon; Rhane-Poulenc Rarer	Antineoplastic agent	Parenteral	††
Salmeterol xinafoate	Serevent	Allen and Hanburys	Antiasthmatic agent	Metered-dose inhaler for oral inhalation	1-P
Tacrolimus	Prograf	Fujisawo	Immunosuppressant	Capsule, Parenteral	1-P,E

* Part I appeared in the April 1995 issue of PENNSYLVANIA MEDICINE.

** Food and Drug Administration classification of new drugs:

1 = new molecular entity

4 = combination product

P = priority review, therapeutic gain

S = standard review, substantially equivalent

E = a drug used to treat life-threatening or severely debilitating illnesses

V = designated orphan drug

† Approved by the FDA before 1994, but not marketed until 1994.

†† A biological approved through an FDA procedure that does not assign a specific classification.

"Better prescribing through education."

Why Do 60,000 Doctors Trust Us With Their Professional Reputations?

In an era of "not if, but when" a doctor will be accused of malpractice, your choice of professional liability coverage is extremely important. We know that *any* allegation can be devastating to both your professional reputation and your personal assets... making the company you choose critical to your future well-being. Many factors should be taken into account when making a decision.

Consider our financial strength and stability. We are rated A+ (Superior) by A.M. Best and AA (Excellent) by Standard & Poor's. No other company with an exclusive focus on the needs of the health care community has higher financial ratings.

Look at our experience. For nearly a century we have specialized in defending and protecting doctors. No other company has **successfully defended** more than 180,000 malpractice claims.

Local service is important, too. Our General Agents and Field Claim Managers work with you on every allegation. They average more than 15 years experience working with doctors and the legal system.

Why do more than 60,000 doctors trust their professional reputation and personal assets with us? No other company combines nearly a century of experience with financial strength and the local service provided by The Medical Protective Company.

Integration Insider

Analysis of the emerging health care marketplace in Pennsylvania.

In December 1994, PENNSYLVANIA MEDICINE published, "Keeping Up with Mergers Proves Challenging." Included was an extensive list of mergers, completed or in development within Pennsylvania. As stated in the article, "Each merger brings new light to the changing health care environment."

This month, we begin "Integration Insider," an ongoing column to update Pennsylvania physicians on the state of managed care in the commonwealth. News, divided regionally, is derived from press reports and is not intended to be comprehensive.

For more information about this topic, call the PennMed Member Services Company (PMSCO) at (800) 228-7823 or (717) 558-7750.

- Blue Cross of Western Pennsylvania and Pennsylvania Blue Shield are discussing merging their businesses to eliminate competition, improve operating efficiencies, and lower costs. Insurers say there is "high probability" a merger will occur. Blue Cross and Blue Shield plans nationwide have merged in all but five states. [*Pittsburgh Business Times*]

- The University of Pittsburgh has signed exclusively with Blue Cross of Western Pennsylvania for health insurance for university employees. The move, which staff and faculty overwhelmingly voted against, eliminates employees' HealthAmerica option. Many are concerned about finding new, Blue Cross-participating physicians. [*Pittsburgh Post-Gazette*]

- The York County Physician Organization (YCPO), which

launched its membership drive for shareholders in March, reached its minimum goals of 100 total members and 50 primary care physicians by mid-April. [*YCPO News*]

- Capital Blue Cross, Camp Hill, and Penn State's Milton S. Hershey Medical Center, Hershey, have announced an agreement to jointly provide administrative support and managed care consulting services to primary care practices through their new Pennsylvania Physician Services, Inc. [*Penn State Medicine, Hershey*]

- Holy Spirit Hospital, Camp Hill, has joined with Carlisle Hospital and Penn State's Milton S. Hershey Medical Center to form a "wholesale HMO" they say will improve quality care while containing costs. [*Central Penn Business Journal, Harrisburg*]

- Some OB/GYNs at Polyclinic Medical Center, Harrisburg, are protesting the proposed merger between Polyclinic and the Capital Health System. To reduce duplication of services and save money, planning committees have preliminarily proposed serving OB, pediatric, orthopedic, rehabilitation, and neurology patients at Harrisburg Hospital, a member of the Capital Health System. Cardiovascular services would be based at Polyclinic. The OB/GYNs say that, while they do favor the merger overall, the focus at Polyclinic must be broader. [*Central Penn Business Journal, Harrisburg*]

- The Central Pennsylvania Physicians Organization's (CPPO's) 106 members have signed contracts with U.S. Healthcare. CPPO is one of the first physician organizations to sign with the insurer, which had previously refused to negotiate with such entities. [*Patriot News, Harrisburg*]

- Twenty-six Hazelton-area physicians, representing 14 specialties, have formed

Hazelton Organization of Physicians for Excellence (HOPE), a nonprofit physician organization whose goal is "to keep the focus of health care on the patient, thereby assuring them the best care possible." [*Standard-Speaker, Hazelton*]

- Three suburban Philadelphia hospitals—

Grand View Hospital, Sellersville; North Penn Hospital, Hatfield; and Doylestown Hospital, Doylestown—are in discussions about forming an alliance to collaborate rather than compete for area business. [*Philadelphia Business Journal*]

- FPA Medical Management, Inc., a San Diego-based health

care management services company, has established a network of about 1,000 primary care physicians in Pennsylvania and New Jersey. Participating in the network will give doctors more negotiating power in the managed care arena, according to FPA chairman and founder, Dr. Sol Lizerbram, a Pennsylvania native. FPA first entered the Philadelphia market last year when it signed a contract with the Greater Delaware Valley IPA, a network of 400 primary care doctors headed by Dr. Sam Lizerbram, Sol's brother. [*Philadelphia Business Journal*]

- West Jersey Health System, based in Southwestern New Jersey, is joining Thomas Jefferson University and Main Line Health System, both in Philadelphia, in planning the formation of the Healthshare Group,

"an integrated health care partnership designed to promote the development of high-quality, cost-effective, and community-focused health services." [West Jersey Health System press release]

- Officials of Temple University and Northeastern Health System, Philadelphia, earlier this year announced that a final agreement had been reached that makes Northeastern Hospital part of the Temple University Health Care System. [Temple University news release]

- Pennsylvania Hospital, Philadelphia, has established a physician-hospital organization (PHO), "which creates a partnership with shared governance between the physicians and hospital to directly contract with third-party payers." [Pennsylvania Hospital news release]

- OakTree Health Plans, Philadelphia, has merged into Oxford Health Plans of Norwalk, Connecticut, "one of the fastest-growing HMOs in the country." Purchase price was reported at \$66 million. [Philadelphia Inquirer]

Medicare/Medicaid

- The Lancaster Community Health Plan, developed by the Lancaster City and County Medical Society with the support of the Pennsylvania Medical Society, is positioned to begin managing care for Medicaid patients. [Central Penn Business Journal, Harrisburg]

- HealthAmerica of Central Pennsylvania and Keystone Health Plan Central are both considering moves to begin serving Pennsylvania's Medicare and Medicaid populations. [The Patriot, Harrisburg]

- HealthGuard, Lancaster, a wholly owned subsidiary of Pennsylvania Blue Shield, plans to become an HMO for Medicare patients. [Central Penn Business Journal, Harrisburg]

- Best Health Care, Inc., which formed in 1993 in the Philadelphia area, is aiming to start a Pittsburgh-based HMO for Medicaid patients. [Pittsburgh Business Times]

Facts, Figures, Etc.

- The Ridge administration has removed Steve Male as the state's chief regulator of HMOs. Male had been opposed to physicians establishing risk-bearing organizations. He has regulated the

commonwealth's HMO industry for more than two decades. [The Patriot, Harrisburg]

- Profits at Central Pennsylvania's HMOs have been rising for the last three years, but businesses have not received the benefit of lower health care insurance costs as a result, according to information filed at the state Department of Insurance.

[Central Penn Business Journal, Harrisburg]

- Within five years, one out of three Philadelphia hospitals will disappear, along with 40 percent of existing jobs in the health care industry, according to four leading players in Philadelphia's health care market.

[Philadelphia Daily News]

PENN, GMIS JOIN FORCES FOR MANAGED CARE TRAINING

The University of Pennsylvania Medical Center and GMIS, Inc., a Malvern-based medical support systems group, are joining forces to train physician leaders in managed care, clinical efficiency, and quality improvement through a newly created fellowship. The fellowship is meant to serve as a model program for training and preparing physicians to be leaders in both academic medicine and in managed care organizations.

Program participants will complete an individualized curriculum in health care systems, health services research, epidemiology, biostatistics, and health policy from resources available at Penn. They will also work on practical projects that analyze medical decision making, review sophisticated clinical databases, promote efficiency, and improve patient care.

For more information, call Penn at (215) 349-5620, or GMIS at (610) 296-7658, extension 3000.

CONTRIBUTIONS SOUGHT IN NEW YORK LEGAL CASE

The Medical Society of the State of New York (MSSNY) has started a legal defense fund for Gerald Einaugler, MD, a New York internist who was criminally prosecuted for a patient care decision.

In a letter to AMNews, Morton Kurtz, MD, past president of MSSNY, explains that "Dr. Einaugler was criminally tried and convicted of willful neglect and reckless endangerment because he did not, as alleged by the state, transfer a nursing home patient to a hospital rapidly enough once he learned of the patient's peritoneal problem. Stripped to its essence, he was convicted of having chosen to hospitalize the nursing home patient later rather than earlier in the day."

Amici curiae briefs on Dr. Einaugler's behalf were filed in the case by the AMA, MSSNY, the Medical Society of the County of Kings, and the New York State Society of Pathologists. Most recently, New York's highest court rejected Dr. Einaugler's appeal of the conviction.

According to Dr. Kurtz, "Dr. Einaugler faces financial ruin." He says the defense fund will be used to pay Dr. Einaugler's legal costs, as well as a new appeal.

For more information about the case, call MSSNY at (516) 488-6100, extension 323. Send contributions to: Einaugler Legal Defense Fund, c/o MSSNY, 420 Lakeville Road, Lake Success, NY 11042.

Risk Management Resources Available from PMSLIC

The following risk management resources are available from the Pennsylvania Medical Society Liability Insurance Company (PMSLIC). To order, call (800) 445-1212.

Medical-Legal Correspondence Course

A course providing basic information on how to practice safer, more defensible medicine. Upon completion, 12 hours of continuing medical education credit are awarded. Member price: \$125. Order # RMMLC27.

Patient Telephone Call Record Pads

Member price: 10 pads: \$18.55; 20 pads: \$37.10. Order # RMTTCR29.

Note: Prices for the Call Record Pads listed in the February 1995 Resource Guide were incorrect. Refer to prices listed above when ordering.

TESTIMONY SUPPORTS REPEAL OF STATE'S CON PROCESS

State Society President John H. Hobart, MD, on April 11 testified before the House Health and Human Services Committee to urge approval of House Bill 335. Introduced by Representative Jere L. Strittmatter (R-Lancaster), the bill proposes a repeal of Pennsylvania's certificate of need (CON) process, as established by the state Health Care Facilities Act. This is an excerpt of Dr. Hobart's testimony.

I don't need to convince this committee that there is tremendous public pressure on insurers, providers, researchers, and suppliers to justify every aspect of the health care system, even things previously accepted on faith. Access to affordable, quality health care is now the expectation. Certainly, ensuring access, quality, and affordability—a concept the Society has long supported—was the principal reason for establishing the Health Care Facilities Act.

Yet, within the framework of this legislation, the Medical Society finds the state has adopted rules and regulations that work against these objectives, contradict the certificate of need program specifically, and more generally, contradict national trends in health care.

The Society advocates a free and competitive health care market that allows the development of alternative delivery and financing systems—an environment that allows physicians to choose how and where to practice. We support efforts to increase physician cost consciousness, but we insist also that there be safeguards to ensure quality of care and patient access to care. With those views as our starting point, we assisted in good faith with the reenactment of the CON legislation in 1992 by providing amendments that were adopted.

Then, a year and a half ago, the Department of Health appointed a task force to amend the Surgical Services Chapter of the State Health Services Plan, which outlines the criteria for obtaining a CON for an ambulatory surgical facility. Unfortunately, the task force included a disproportionate number of individuals who currently own or operate large ambulatory surgical facilities (ASFs) or who represented

hospitals. Given the makeup of the task force, it is not surprising that a majority of the group had little interest in facilitating the development of new ASFs. The result was a new Surgical Services Chapter which requires CON applicants to demonstrate a *need* for the proposed service.

I think it is very interesting that the new chapter was written to include data showing a surplus of facilities—or *no need*—in virtually all areas of the state. Consequently, there is very little any physician can do to give a convincing argument for community need.

Additionally, the chapter contains restrictive criteria that 1) prevent physicians from developing dedicated rooms in their offices for outpatient surgery, and 2) restrict them from doing procedures requiring types of anesthesia other than local.

Managed care organizations are requesting—or requiring as a precondition for payment—physicians to perform more procedures in their offices. In light of these expectations, such restrictive criteria are especially alarming.

The recent history of CON in Pennsylvania boils down to this: Driven by the “we don't need it” posture of the department's statisticians and the “we don't want

it” attitude of a less-than-objective task force, the Department of Health adopted criteria that in effect *eliminated* its prerogative to approve a CON—even if the applicant can demonstrate that the project will *reduce* health care expenditures.

In the little more than a year since the new guidelines have been in effect, the Society has heard from its physician members that problems with Pennsylvania's restrictive CON policy abound. Members who treat patients in a variety of specialties report they have been unable to obtain a CON for the surgical aspects of their practices. They tell us patients are complaining about high hospital outpatient operating room charges. They say insurance companies are increasingly reluctant to pay for certain procedures performed in hospital outpatient surgery centers. And, confirming what I said earlier about the current HMO environment, they say insurers offer to put physicians on preferred provider lists if they perform surgical procedures in their offices.

Facility licensure is intended to provide protection for patients... The new guidelines notwithstanding, the Society has always had great concerns about how *long*, how *complicated*, and how *expensive* the CON process is.

Society Supporting Network Exclusion Bills

The State Society is supporting three new bills, introduced during the first three months of the 1995 legislative session, that deal with network exclusion of physicians.

House Bill 571, a redraft of '94 legislation sponsored by Representative Richard Olsasz (D-Allegheny), would prohibit discrimination against a health care provider who agrees to accept negotiated payment levels and would adhere to quality standards.

House Bill 630, sponsored by Representative David King (R-Mercer), focuses on access to care under managed care in rural counties. The legislation, which includes State Society and AMA language, would: 1) require a credentialing process based on objective standards; 2) provide for due process, including notice and opportunity to appeal provisions for health care providers; and 3) assure providers of input into the insurance plan's medical policy.

Both House Bills 571 and 630 have been assigned to the House Insurance Committee. Public hearings are scheduled on House Bill 630: May 18 in Altoona, June 15 in Meadville, and July 19 in Harrisburg. The Society plans to testify.

As chair of the House Insurance Committee last year, Representative Nicholas Colafella (D-Beaver) held several public hearings on network exclusion. **House Bill 816**, sponsored by the former chair, is based on testimony presented at those hearings. This bill, which would require each HMO to establish and maintain a grievance resolution system regarding the complaints of medical providers, would apply to providers rejected or terminated by an HMO.

If the U.S. Senate Can Deliver Health Care Liability Reform, Maureen O'Regan Can Deliver Babies Anywhere.

Meet Dr. Maureen O'Regan.

She's an obstetrician in northern Virginia, within sight of the nation's Capitol.

She delivers babies in Virginia where there's a limit on health care liability awards.

Just across the Potomac River, in Washington, D.C., there is no limit, and malpractice insurance costs at least \$68,000 – more than twice the cost in Virginia.

Dr. O'Regan would like to deliver babies in Washington, but the cost is too high and the risk is too great.

She's not alone. One out of eight obstetrician/ gynecologists nationally no longer delivers babies. Other doctors all across the country struggle with the same dilemma.

Without liability caps, huge amounts of money are spent on defensive medicine. Physicians must order more procedures and tests than the patient really needs. The trust between patient and physician is threatened.

Congress can fix this. The U.S. House of Representatives has already passed a bill that

would set a \$250,000 cap on noneconomic damages. Now it's up to the U.S. Senate.

Contact your U.S. Senators **now**. Tell them to vote for Health Care Liability Reform.

And let Dr. O'Regan deliver babies wherever she's needed.

Write both U.S. Senators c/o U.S. Senate, Washington, D.C. 20510. Or call their offices at (202) 224-3121.

American Medical Association

Physicians dedicated to the health of America

KePRO South: A Source of Pride

Donald E. Harrop, MD

From time to time I have made references to, or written articles about, some of the things the Keystone Peer Review Organization (KePRO) does in addition to our Medicare review contract, such as workers' compensation review. However, except for possibly an occasional passing reference, I have never detailed our Florida operation in this column.

Several years ago, when the PRO in Florida went out of business, KePRO, in a joint venture with the Florida Medical Association, submitted a proposal for the Medicare PRO contract. Although we were not awarded the PRO contract, we were approached by the Department of Health and Rehabilitative Services (HRS) to submit a proposal to review Medical Assistance (Medicaid) cases, a contract the previous Florida PRO had also held.

The Medicaid review bid, which was submitted by KePRO—and not the joint venture—was successful for a 14-month contract which started in March 1992. We immediately opened an office in Tampa. The joint venture corporation would not have qualified HRS to receive 75 percent federal matching funds because it was not a Medicare PRO. When an entity other than a PRO conducts Medicaid review, the federal match is approximately 50 percent.

During the first contract period, responsibility for oversight of Medicaid was transferred to the Agency for Health Care Administration (AHCA) branch of HRS. Each year since then, when the contract is renewed, AHCA has added to the review responsibilities and the dollar amount of the contract. Our current contract requires retrospective review of multiple payment categories and settings.

KePRO averages 4,750 reviews of inpatient hospital cases per month. We conduct review of 100 percent of the Medicaid psychiatric/substance abuse cases, one- and two-day hospital stays, and day outliers. On-site review of both utilization and quality of care is conducted in county public health units.

Other on-site retrospective review includes quality of/access to care provided by 28 HMOs which enroll Medicaid recipients. A collaborative, case management, concurrent review program was developed and implemented by KePRO South in 31 hospitals in a four-county area at the request of AHCA during our 1993-94 contract.

Thirteen special studies are in progress or have been completed since July 1, 1994. KePRO South also participates in the University of South Florida, College of Public Health curriculum on managing quality in health care.

In 1992, Medicaid review started with a staff of 17 employees. Present staff number 55, but this number is growing because we started a prior authorization of home care services program on March 27, 1995. KePRO South is managed by our Chief Operating Officer, Florida Operations, Pat Eley, RN. Pat was formerly the manager of our Pittsburgh-area office. The Tampa office is nearly a self-contained operating unit with the exceptions of accounting, payroll, and mainframe computer services.

Our medical director at KePRO South is William L. Moore, MD, who started on a part-time basis but became a full-time employee in January 1994. Dr. Moore, who is board certified in family practice, is a native of Pennsylvania and attended Hahnemann University School of Medicine.

Because of the reputation we have established in Florida, we were recently invited to submit a proposal to the Florida Healthy Kids Program to conduct quality/access-to-care audits of the care provided to school-age children enrolled in the program. At the time of this writing, we are also considering the submission of a proposal for the utilization review/case management portion of the self-funded Florida state employees' health insurance program.

We in Pennsylvania are very proud of the KePRO South operation and the fine reputation they have established. ◊

Dr. Harrop, president of the Keystone Peer Review Organization (KePRO), offers KePRO news and views in this column each month.

John Kintzer, MD, Bethlehem, was sworn in as the 129th president of the Northampton County Medical Society. Other officers elected were: **Gary Costacurta, MD**, Easton, president elect; **Marilyn R. McDonald, MD**, Bethlehem, vice president; **Robert J. Salash, MD**, Bethlehem, secretary; and **Walter K. Peters, MD**, Bethlehem, treasurer.

Thomas F. Armour II, DO, of Farrell, was recently elected president of the Montour County Medical Society.

Gretchen A. Hinze, MD, Lancaster, is a recent winner of the AMA/Glaxo Achievement Awards. The award recognizes 50 medical students and residents for their outstanding leadership in medicine and community activities.

Cooper Hospital/University Medical Center, New Jersey, has appointed **Michael E. Goldberg, MD**, of Churchville, chief, Department of Anesthesiology.

Reginald Pugh, MD, and **Madhu Sinha, MD**, have recieved three-year appointments as cancer liaison physicians through the Cancer Liaison Program of the American College of Surgeons' Commission on Cancer. Dr. Pugh will serve at Somerset Hospital and Dr. Sinha at the DuBois Regional Medical Center.

Dr. Rilling

David C. Rilling, MD, a general, vascular, and thoracic surgeon, Grand View Hospital, Sellersville, was appointed medical staff president. Other newly elected medical staff officers are:

Frank T. Kucer, MD, vice president; **Anthony E. Foderaro, MD**, secretary/treasurer; **Lewis M. Gill, MD**, medical executive committee member-at-large; and **Paul R. Hermany, MD**, member-at-large. **Walter G. Zemel, MD**, was re-elected representative to the Hospital Medical Staff Section of the Pennsylvania Medical Society.

Pennsylvania Hospital, Philadelphia, recently elected the following: **David L. Paskin, MD**, president, professional staff; **Robert M. Toborowsky, MD**, vice president,

professional staff; and **Keith D. Calligaro, MD**, secretary-treasurer.

Patrick J. Vlahos, DO, an anesthesiologist, was named medical director of the Mercy Same Day Surgery Center, Mercy Hospital, Pittsburgh.

Rodrigue Mortel, MD, professor and chair, Department of Obstetrics and Gynecology, Penn State's College of Medicine, Hershey, was appointed associate dean and director of the Penn State University Cancer Center. Also at the College of Medicine, **Stephen E. Cyran, MD**, was appointed chief, Division of Pediatric Cardiology; and, **John P. Kupferschmid, MD**, was appointed to the Division of Cardiothoracic Surgery.

Alan R. Spitzer, MD, has been named as chair, Department of Pediatrics, Thomas Jefferson University Hospital, Philadelphia, and pediatrician-in-chief at the Alfred I. duPont Institute Children's Hospital, Wilmington, Delaware.

University of Pennsylvania Medical Center, Philadelphia, has appointed **Brian L. Strom, MD**, chair, Department of Biostatistics and Epidemiology.

Roman E. Bojewski, DO, was named "Doctor of the Year" by the Guild of Millcreek Community Hospital, Erie. Dr. Bojewski is a family physician in Erie.

Joel Weissfeld, MD, has received an award from the National Cancer Institute (NCI) and the Pennsylvania Department of Health for his efforts in the databased Intervention Research Project, an NCI-funded breast cancer screening project.

The president of the Republic of Finland has awarded the title *Commander of the Order of the Lion of Finland* to **Hilary Koprowski, MD**, professor of microbiology and immunology, Jefferson Medical College of Thomas Jefferson University, and professor laureate of the Wistar Institute. Dr. Koprowski was honored for his numerous scientific accomplishments during his 43-year career in medical research.

Health Partners, Philadelphia, has appointed **Donald Liss, MD**, to medical director for resource management.

Allan M. Arbeter, MD, chairman, Department of Pediatrics, Albert Einstein Medical Center, Philadelphia, has received the 1994 J. Stanley and Helene M. Cohen Prize for Research.

Ake Grevnik, MD, PhD, professor of anesthesiology/critical care medicine, medicine, and surgery, University of Pittsburgh Medical Center (UPMC), has been named distinguished service professor at UPMC in recognition of his service to the university and contributions to the development of critical care medicine worldwide.

Kenneth Grimm, MD, a graduate of the University of Pennsylvania School of Medicine, and **Barbara Troupin**, a student in Penn's MD/MBA program, were honored as Pisacano Scholars by the Nicholas J. Pisacano, MD, Memorial Foundation for exhibiting the highest level of academic excellence, strong character, and interpersonal skills, and demonstrating a commitment to community service and family practice.

Jonathan P. Garino, MD, attending surgeon, Implant Services of the Joint Reconstruction Center, University of Pennsylvania Medical Center, Philadelphia, was recognized for his presentation of the results of a study reporting potentially common and serious complications from the intra-articular use of laser energy in the knee at the American Association of Orthopedic Surgeons conference.

Jeffrey S. Gerdes, MD, associate professor of pediatrics, Jefferson Medical College of Thomas Jefferson University, Philadelphia, was appointed chief, Section on Newborn Pediatrics, Pennsylvania Hospital, Philadelphia.

Good Communication: The Best Defense Against Litigation

David Woods

Americans' number one fear, it's said, is not of death or disease—or even, as Franklin Roosevelt put it, of fear itself—but of public speaking. Despite the self-confidence and extroversion for which Americans are internationally known, ask one to get up and “say a few words,” and the brain freezes, the mouth dries, the armpits become Niagara. And butterflies swarm.

Except for physicians. Physicians know that these phenomena are explainable: flow of adrenaline. Tachycardia. All quite natural. And so they speak. Without fear.

No, the major fear for physicians is litigation. Malpractice. The nightmare of 900,000 lawyers out there, eyeing piranha-like the prey of contingency fees. And the parallel fear that “professional liability insurance,” which in some jurisdictions and for some specialties can cost more than \$100,000 a year, might become an intolerable burden.

There are ways to alleviate these fears; most have to do with communication.

To start with the basics: Keep good records. If the information you have on your patients is incomplete or vague or confusing, you're already 30-love down on the malpractice courts.

Second, get the informed consent of your patients based not only upon a signed document but on a full verbal explanation of a given procedure. Also, educate them about the limits and, sometimes, the imponderables of medicine. Moreover, make them aware that they are part of the process—responsible for asking questions, following directions, participating. You, in turn, have a duty to communicate lucidly and explicitly...and to make sure that the patient understands.

One insurer notes that a number of communication gaps continue to dominate malpractice litigation, including:

- unclear or nonexistent communication among co-treating or co-prescribing physicians in a group practice, and between referring and consulting physicians;

- ambiguous communications between physicians and nurses, especially with respect to physicians' orders;

- no response to calls by hospital nurses for a physician's assistance; and

- failure to respond to a patient's complaint about medical care.

Insurers believe physicians can learn much from patients. Ask patients what they like most and least about the practice. Then, share all compliments with staff members, and elicit their help in resolving complaints.

Most physicians are familiar with the defensive medicine that takes place as a response to the explosion of often opportunistic medical malpractice litigation. But endless tests and procedures aren't the only defense. Such “feel good” or public relations strategies as not keeping patients waiting—or apologizing if you do—can be an excellent unguent for the irritants that can turn into litigation.

Oh, and if—God forbid—you *are* sued, good communication will continue to serve you well. According to *Medical Practice Communicator*, a newsletter on communications for physicians, professional liability litigation typically lasts about two years...or between 40 and 46 months if the case actually goes to trial. The newsletter urges, “Emphasize people skills. Don't let the suit have a negative impact on your relationship with patients. That will only increase your risk of being sued again.” Make increased use of formal and informal second opinions and consultations. “By consulting with others, you help to prevent clinical errors that can lead to other lawsuits.” Finally, the newsletter notes, “share your experience with significant others; it's surprising how many physicians don't tell their spouses they've been sued.”

Clearly, the best way not to become part of the estimated \$4 billion-a-year medical malpractice litigation “industry” is a variation on defensive medicine—good communication; and even if you do become a part of it, communication will help you cope. ☺

Mr. Woods, former editor and publisher of the Canadian Medical Association Journal, is president of Healthcare Media International, Inc., Philadelphia, publisher of the International Digest of Healthcare Management.

PHYSICIANS WANTED

Western Pennsylvania—Board certified or prepared emergency physicians needed for staffing a community hospital emergency department near the Ohio/Pennsylvania border. Please send CV to P.O. Box 91666, Cleveland, OH 44101.

Pennsylvania—Physician group seeks full-time and part-time physicians for an emergency department of community hospitals in central and western Pennsylvania. Please send resume to P.O. Box 91666, Cleveland, OH 44101.

Pittsburgh, Pennsylvania—Penn Group Medical Association (PGMA), a 100-physician multi-specialty group practice affiliated with the largest HMO in Pittsburgh, is seeking BE/BC physicians in: family practice, internal medicine, pediatrics, ob/gyn, and psychiatry. We are formally affiliated with major teaching hospitals and leading community hospitals in Pittsburgh. PGMA serves eight ambulatory care centers, all conveniently located near cultural, educational, recreational, and corporate activities. Excellent salary, and fringe benefits. For confidential consideration contact: Angela Lascola, HealthAmerica, 5 Gateway Center, Pittsburgh, PA 15222, or call collect (412) 553-7502.

Emergency Physicians—Emergency Physicians Associates is seeking quality ED physicians for a variety of practice opportunities. Director and staff positions are available. EPA contracts with hospitals in NJ, PA, MD, and NC for the provision of emergency medicine, urgent care and industrial/occupational health services. Our client hospitals are located in rural to urban areas with patient volumes ranging from 10,000 to 75,000. At EPA we offer physicians competitive compensation, flexible schedules and shifts, occurrence-based malpractice insurance, a variety of practice settings to choose from, cooperative working environments, and supportive medical directors and corporate staff. Interested candidates may contact EPA at 1-800-848-EPA-1.

Part-time position available evening or weekends, modern urgent care center, N.E. Phila. Suburb. Excellent opportunity for resident or practitioner seeking to supplement income. Contact Dr. Miller (215) 638-0666.

Guthrie Clinic needs PEDs for Fingerlakes region, NY and PA. These practice opportunities will fill quickly, and do not qualify as a J-1 Visa conversion area. For more information, call Sherron Satow, 800-776-5776, or fax CV: (314) 863-1327.

Practice Opportunities—Openings Nationally in all specializations. Excellent salary and benefit packages including partnership opportunities, 100% paid malpractice, moving and relocation expenses, license assistance, up to 6 weeks paid vacation. On site interview expenses paid. Toll-free 24 hours (800) 759-0104. Or send CV to La Salle Medical Group, 6599 East Thomas Road, Suite 2097, Scottsdale, AZ 85251

Family Practice position available in the beautiful mountains of North Central Pennsylvania. Group practice opportunity at a rural community health center. Competitive salary and benefits. Education loan repayment available. For immediate consideration send CV to Administrator, Keystone Rural Health Consortium, Inc., P.O. Box 270, Emporium, PA 15834, or call (814) 486-1115 or fax (814) 486-0404.

BC/BE Family Practice needed to join busy, growing semi-rural private practice with two physicians and two nurse practitioners in beautiful South Central Pennsylvania. Hospital rounds, office hours, and sharing of on-call required. No obstetrics. Submit letter/resume to Clark C. Dunkle, III, CPA, 15 State Avenue, Suite 201, Carlisle, PA 17013.

Chief Radiologist: The division of Ambulatory Health Services of the Philadelphia Department of Public Health seeks an energetic leader for its radiology physician team located in eight clinical settings in an urban population. 15,000 radiologic studies and 2,500 mammographies are performed yearly. Candidates are sought who will provide leadership, which include program guidance. Candidates must possess strong clinical skills, have hospital affiliations, have relevant management experience in a health care setting, and possess

excellent interpersonal skills. MD or DO degree, board certification Radiology and current PA license are required. Ability to read mammograms also required. This position is part-time, approximately 20 hours per week. Send letter of intent, CV and three names of references to Thomas Storey, M.D., M.P.H., Medical Director, 500 South Broad Street, Philadelphia, PA 19146; 215-685-6769. EOE/MF

Family Practice in Northeast Join 240-physician MSG located Twin Tier region of New York. Work with 3 other FPs. Good call schedule. Hospital minutes from clinic. Group operated by physician members. Strong salary and benefits package. Community home to two Fortune 500 companies. Low cost of living and friendly people. Convenient access to nation's cultural centers. For more information, call Jim Cavnar, 1-800-678-7858 or fax CV: 314-726-0026.

Pediatric in Northeast Join 240-physician MSG located in Twin Tier Region of New York. Work with three other PEDs. Good call schedule. Hospital minutes from clinic. Is Emergency Medicine Emergency Medicine?

Russell Bieniek, MD

Is emergency medicine emergency medicine? Sounds like a crazy question? The answer that I have come to realize this year is, *no*. It depends on multiple factors, including the state or local government, patient population base (including volume and acuity), medical staff, teaching or non-teaching hospital, the "history" of the ED, and the training and experience of the individual ED physician.

Everything is relative. What I think might be basic in my ED, others may think is advanced or even forbidden, and vice versa. We [emergency physicians] are having arguments about who should be allowed to work in an emergency department, be a fellow of the American College of Emergency Physicians (ACEP), or even a member of ACEP; yet there is so much out there that we have embraced, yet fail to recognize.

Urgent care centers, fast tracks, observation units. EMS, hyperbaric centers, poison centers, and occupational medicine, to name a few. Where do these lie? More importantly to this discussion, where do the physicians who practice in these areas belong?

For many years we embraced these people and tried to meet their needs in ACEP. If they train in certain emergency medicine residencies that qualify them to

sit for ABEM (American Board of Emergency Medicine) boards, then they can be recognized by our college. If not, they can only be members, at least for now. Is this the only training people need to go into these specialized fields, and is it where we want our EM residency grads to go?

So far, I have just addressed the issue of physicians. What about nurse practitioners, physician assistants, and paramedics to name a few? The scope of practice for these groups of providers has increased tremendously, and with the path I see health care reform taking, this will only continue.

These people are no longer just assisting with care; they are assessing, diagnosing, and prescribing. They are doing this in our emergency departments, and in many cases without a physician even seeing the patient.

Who then is responsible for the medical care given, and the primary and continuing education these people receive? I think we need to look in the mirror for the answer.

Emergency medicine continues to evolve, and we need to grow with it. It is bigger than most of us think when the image of a "normal day in the ED" comes to mind. You cannot control a specialty by limiting its membership; you only stifle it, and encourage others to branch off and form their own groups with their own special agendas. By representing ALL, more can be accomplished for our patients and our members. ☐

Reprinted with permission from PaACEP News of the Pennsylvania Chapter of the American College of Emergency Physicians, March 1995.

Dr. Bieniek is immediate past president of the Pennsylvania Chapter of the American College of Emergency Physicians.

"By representing ALL, more can be accomplished for our patients and our members."

We Welcome Your Response!

The "Discharge Summary" column was created to provide an open forum for opposing viewpoints and to include broad discourse from opinion leaders throughout health care. We welcome your submissions and comments. Please limit submissions to three double-spaced, typed pages, and send to Editor, see address, page 2.

Extended Acute Care Leadership is our Continuing Commitment.

Leadership.

It implies being the best; it requires vision, credibility and innovation.

In the Delaware Valley, one hospital, the Continuing Care Hospital of Philadelphia (CCH), has taken the lead in providing high-quality medical care for patients with a need for a longer-than-usual hospital stay.

Through its commitment to "high-touch, low-tech" patient care, provisions are made for the patients' every need. As a result, CCH enables its patients to achieve an optimal outcome.

The CCH approach to patient care also respects and accommodates the quality of the relationship that exists between

the patient and the referring physician. In fact, CCH invites referring physicians to apply for privileges at the Hospital and to join with the CCH staff in managing the patient's medical care throughout the length of stay.

The Continuing Care Hospital is also committed to maintaining a staff that includes the region's most respected acute care providers and physicians who are board-certified in geriatric medicine. CCH is accredited by the Joint Commission on Accreditation of Health Care Organizations (JCAHO) and is licensed by the Pennsylvania Department of Health.

Given its strong leadership in extended acute care, CCH

attracts patients from throughout the eight-county area, including Bucks, Chester, Delaware, Montgomery and Philadelphia counties in southeastern Pennsylvania; and Gloucester, Burlington, and Camden counties in southern New Jersey.

When the patient's need is for extended acute care, call the Continuing Care Hospital of Philadelphia at (215) 787-2399. We'll be pleased to send you a copy of our brochure or arrange a tour of our facility.

POWERFUL PARTNERSHIPS.

Stability, strength
and synergy
stand the test of time.

Almost twenty years ago,
such a foundation was laid
by medical professionals
to build protection through your own
medical liability insurance company.

With your support, we have grown
to become the insurance carrier
of choice for physicians and surgeons,
as well as their hospitals,
throughout New Jersey and Pennsylvania.

Today, change is everywhere, and stability,
strength and synergy have never been so valuable.

But they are not enough.
To succeed today, you need the added power
of new insurance products, financial services,
and consulting services.

MIIX has broadened its foundation and
introduced these membership enhancements
to help you meet the challenge of change.

Call us for more details: 1-800-234-MIIX.

We develop powerful partnerships.

Presbyterian Medical Center designates this Continuing Medical Education activity for 50 credit hours in Category I of the Physicians' Recognition Award of the American Medical Association and The Pennsylvania Medical Society membership requirement.

The Presbyterian Medical Center of Philadelphia is accredited by the Pennsylvania Medical Society to sponsor continuing medical education for physicians.

All faculty participating in continuing medical education programs sponsored by Presbyterian Medical Center of Philadelphia are expected to disclose to the program audience any real or apparent conflict(s) of interest related to the content of their presentation(s).

28 *A New Approach to Health System Reform:*

Seizing the Moral High Ground

Has economic imperialism seduced physicians into viewing medicine as more of a business than a profession? Yes, says one State Society member, who proposes establishing a "Hoover Commission" to redesign health care. A responding opinion begins on page 31.

Cover photo by Roger Bester/FPG International Corp., New York

12 *Coping with Kaleidoscopic Change*

A medical journalist, a medical leader, a medical academician, and a federation representative offered their perspectives of the changing health care marketplace at this year's Leadership Conference in May. Read what they had to say in this conference recap.

24 *Volunteers Sought to Help Train More Generalists*

Partnerships with physicians and their communities are critical for the success of programs to educate more generalist physicians, such as the initiative at Penn State's College of Medicine in Hershey.

PENNSYLVANIA MEDICINE (ISSN 0031-4595) is published monthly by the Pennsylvania Medical Society, 777 East Park Drive, Harrisburg, PA 17111.

SUBSCRIPTIONS: \$25 per year—United States and Canada; \$35—all others. Single issues \$3.50 per copy prepaid; special issues cost more.

POSTMASTER: Send address changes to PENNSYLVANIA MEDICINE, 777 East Park Drive, PO Box 8820, Harrisburg, PA 17105-8820. Second class postage paid at Harrisburg, PA 17105, and at additional mailing offices.

“This is unbelievable.

Thirty minutes into our first meeting, it was obvious who was running the show, and he wasn't a doctor. He had

an agenda that wasn't anything close to mine. Sure, when they sold me the medical liability policy, they bragged about having physicians on their board. They told me to expect a fair review by my peers if there was ever a problem. Then came the malpractice suit. I'm really afraid I might lose this one, and not because of a bad medical decision. I wish now that I had protected my reputation and signed with PMSLIC. PMSLIC is doctor owned, doctor run. With PMSLIC, any claims brought against me would have been reviewed by physicians like me — physicians with a vested interest in the reputation of the

medical community — a reputation we all need to maintain, even safeguard. That would have made all the difference in the world to me. Because now, I'm really scared. ”

PMSLIC

Doctor Owned, Doctor Run.

777 East Park Drive

MA PLANS UPDATE: The Department of Public Welfare's primary care case management initiatives are moving on separate tracks. The Lancaster Community Health Plan (LCHP) is starting to recruit providers and then sign up recipients. Family Care Network for the under 21 MA population is almost fully operational in 57 or 60 targeted counties. The expansion of HealthChoices program from Philadelphia to five surrounding counties is on indefinite hold pending study by outside counsel and a negotiated settlement to a suit brought against DPW. Currently, the health maintenance organization (Health Pass) continues as a mandated program for roughly 70,000 recipients in Philadelphia. Voluntary HMO participation and fee for service remain as options in the remainder of the proposed HIO service area.

CAT FUND ALERT: Trouble with the CAT Fund looms, as the Ridge administration and the legislature look for ways to shore up the fund in the short run and correct its serious deficiencies in the long run. The Society continues to seek meaningful medical liability tort reform, while fighting unreasonable proposed solutions to the fund. One recent recommendation calls for doubling required primary coverage limits, for a potential increase in premium costs for physicians of 20 to 25 percent. Another proposal calls for completely eliminating the fund, even in the face of an estimated \$1.9 billion in unfunded liability that would have to be paid. An emergency surcharge remains as another possibility. Watch for information regarding the CAT Fund situation and Society negotiations in upcoming publications.

TAPED ABORTION COUNSELING DISALLOWED: Commonwealth Secretary Yvette Kane has declared that taped messages do not fulfill the informed consent requirements of the Abortion Control Act. One-on-one consultations are necessary, according to Kane. The Bureau of Professional and Occupational Affairs has sent cease and desist orders to nine doctors. Penalties for continued use of the messages instead of one-on-one consultations could include license revocation. Society counsel agrees with the Ridge administration interpretation of the law.

ALL PROVIDER NETWORK ENTERS PA: The State Society, as well as the AMA, have learned of a provider network, All Net, which is soliciting physician participation in its panels in Pennsylvania, New Hampshire, Wisconsin, and possibly other states. All Net requires a \$250 registration fee, limits participation to approximately 18 percent of physicians in each specialty, and appears to market its network primarily to union benefit programs. At present, no information is available as to the length of time All Net has been in operation, the number of contracts it has with physicians or payers, or any other descriptive data. As with any other network, physicians should be advised to acquire as much specific information as possible regarding the benefit to them of contracting with All Net, prior to doing so. Contact the State Society's Department of Medical Economics for more information.

SOCIETY'S DELEGATES CARRY RESOLUTIONS TO AMA: The Society's delegation will carry 11 resolutions to the Chicago for the June AMA meeting. These address: Medicare coverage for annual PAP smears and gynecological exams; making Medicare carriers responsible for financial losses incurred as a result of their own errors; creation of a national clearinghouse for health insurance claims; accurately defining "health care expenses" as used by government agencies; oversight of nurse practitioners; creating a fair appeals process for applications for participation and terminations to managed care entities; prorating dues; modifying the FDA Kefauver Amendment so drugs may be available as soon as proven safe; limiting AMA meetings to the continental U.S.; and studying how to mandate managed care entities to contribute toward care of the uninsured.

Spreading Us Thinner and Thinner...

John W. Mills, MD
Medical Editor

Literature was piled everywhere on our recent return from a three-week vacation. It's been about two weeks now, and I've managed to get through all the first-class items, and the State Society and AMA publications. It struck me rather profoundly, as I read through this accumulated pile, that we in medicine have never had so much to deal with on the socioeconomic side as we now face on a daily basis.

The practice of medicine was essentially just that when I entered practice 35 years ago. Building doctor-patient relationships, trying to do the best job I could in treating illness, and managing ob-gyn problems occupied all of my professional time—and a considerable amount of my family time. There were few other concerns. Billing was done on my statements to patients as well as insurance companies. Joining the county medical society, State Society, and AMA was easy and at relatively minimal cost; and we all did it automatically, for we were physicians professionally united in organized medicine.

What changes 35 years have brought! Listen to a litany:

- Some Nevada physicians have organized a statewide "managed care medical society."
- The Joint Commission for the Accreditation of Healthcare Organizations (JCAHO) is begging for competition in its field of expertise.
- The 9th Federal Circuit Court of Appeals has determined there is no basis for assisted suicide in the constitution.
- Several states have passed significant tort reform caps on pain and suffering in line with the Republican sweep in November '94.
- Physician recruitment rules are being promulgated by the Justice Department (probably justifying increased federal government scrutiny and more lawsuits).
- The medical chair of the Physician Payment Review Commission (PPRC) is now gone, and an economist has taken over who will probably attempt to combine

PPRC and the Prospective Payment Review Assessment Commission (ProPAC).

- The California Medical Society is undergoing major restructuring to give group practice more say-so.

- The AMA and Medical Group Management Association (MGMA) have signed agreements to work together.

- Specialists are being capitated by HMOs, and family practice physicians are being given fee-for-service.

There is no question that we physicians now spread our time out even thinner than before. But as we learned at the seminar preceding the Society's Leadership Conference in May, we must become a player, and master our strategies, or lose big time—perhaps permanently. This is not to say that the practice of medicine shouldn't be your primary goal. However, it is essential to develop some additional skills in order to be able to practice with the least amount of frustration.

Regulation will play a bigger role no matter what party is in power. Despite all the rhetoric, our system of government thrives on regulation. Where else would the overwhelming number of attorneys being churned out by our law schools at an ever-increasing rate find employment?

Negotiating skills are essential for our survival—especially with our leaders. Most of us don't really have much experience with this, and we tend to be unhappy with our leaders who negotiate on our behalf, labeling such as "selling us down the river" or "giving away the store." The derogatory terms don't do anything for our professional unity and tend to fragment us even more.

The point of all this is simple: Accept change, adapt as necessary, support your leaders, and become conversant with negotiating skills. Keep our professionalism alive using terms like "physician" and "doctor" and "patient." Former State Society President Donald Ferguson, MD, said it years ago, as did Michael DeBakey, MD, more recently. "Provider" and "consumer" tend to move us toward a trade or business, and drive a wedge between us and our patients—and ultimately between ourselves. ☉

Pennsylvania Medical Society members are slashing their premium costs with Dodson's Dividend Plan for workers' compensation insurance.

A total of more than \$3.4 MILLION in dividends has been paid to insured members since 1973.

Excellent Savings Potential

- 5% discount on premium rates when policies are issued
 - Yearly dividend opportunities
- A dividend has been returned to insured members **every year** for 21 years.*
- Dividend paid in 1994 —
\$257,678.57
 - Dividends paid (since 1973) —
\$3,675,320

*State laws prohibit insurance companies from guaranteeing future dividends.

Interest-free Premium Payment Plan

Flexible premium payment options are yours with Dodson Group. Your premiums may be paid in convenient installments — **all with no interest fees or service charges.**

The Dodson Dividend Plan is the only workers' compensation insurance program endorsed by the Pennsylvania Medical Society.

Outstanding Personal Service

Claims are handled locally by competent adjusters carefully selected for their expertise and ability to serve our policyholders.

- Upon settlement, most claim payments are in the mail within 48 hours.

Our professional home office and field staffs are ready to assist you in person or by phone.

Riding with the Winds of Popularity

John H. Hobart, MD

It was a privilege to speak before those assembled for the breakfast session of the Society's annual Leadership Conference in Harrisburg last month. And the occasion was heightened into something of a celebration, as we were perhaps the first group to be able to publicly acknowledge the new secretary of the Pennsylvania Department of Health, Peter J. Jannetta, MD, who is, I report with no small gratification, a member of the Pennsylvania Medical Society.

I was particularly pleased that Dr. Jannetta was able to join us, just the day after his unanimous confirmation by the Pennsylvania Senate, because he had a chance to hear from his colleagues some of our concerns and hopes for the future.

Throughout the plenary sessions and workshops, it became clear that, in a world of increasing competition, the watchwords for our institutions are consolidation, merger, and integration. On the other hand, the watchwords for our profession appear to be disintegration, fragmentation, and segmentation.

If we read the papers, we see that HMOs are now big enough and—to use an understatement—profitable enough to be attracting some strong marketplace forces. If we physicians would concentrate our efforts to consolidate and work together as a whole, we would be able to play a much stronger role in this ever-changing environment.

All across the country, state medical societies are restructuring and reorganizing to meet the changing needs of their members. We may look nostalgically at the days when most of us were independent—often solo—practitioners, billing one or two insurance companies on a fee-for-service basis.

To show how things have changed, we have reports of the California Medical Association's creation of "mode of practice" forums for physicians in solo and group practices of up to four physicians, medium group practices of five to 150, large group practices of 150 to 1,000, very large group practices of more than 1,000 physicians, academic practice/medical faculty, hospital-based physicians, and government-employed physicians. These categories represent one state's efforts to define some of its diverse constituencies.

The idea behind California's plan is to identify what has been described as "differences in physicians' policy perspectives based on the environment in which they work." For an example of how these "differences in perspective" can take a wrong turn, we only have to look at one of California's neighbors.

In Nevada, a group of HMO medical directors are trying to set up their own medical society that will focus on the needs of HMO physicians and advocate managed care. This group says the Nevada State Medical Association has advertised and lobbied against managed care—a charge the association denies.

Clearly, definitions are a two-edged sword. On the one hand, they help us to see more clearly who our members are and their special needs. On the other hand, the danger of fragmenting physicians into ever-smaller groups is that it becomes impossible to satisfy anyone.

To offset this danger, the AMA's Dr. Jim Todd has said, "All organizations need to find that bedrock of professionalism upon which every physician can agree, and then build from there." I would remind all of us that our own membership figures are not immune from the national trend. We are seeing some reduction in overall membership, and more than half of our loss of full-dues-paying equivalents can be attributed to the declining membership among large-group practices.

To me, one of the best things about our profession is our genuine concern for the next generation of physicians. We want them to succeed and, most of all, be free to give their patients the best medical care they are able to provide. We don't want them to be at the mercy of institutions or organizations that are trying to drive wedges between physicians and their patients.

While we may not be able to meet the specific concerns of each individual segment of our constituency, we must ensure that all physicians find a home and an effective advocate in their state medical society.

The winds of popularity may blow in one direction today and another direction tomorrow. But when the winds die down, we will still be doing our very best to represent the greatest good for the greatest number of physicians in Pennsylvania. ○

With disability insurance this affordable, can you afford to be without it?

Your ability to earn an income is your most precious asset. So if you've been putting off disability coverage because it's too costly or difficult to find, here's good news:

You can now protect yourself and your family with top-quality disability coverage through the Pennsylvania Medical Society and its endorsed broker, Colburn-Bertholon-Rowland (CBR). And thanks to the society's purchasing power, you can select between non-cancelable or guaranteed renewable

policies, at highly affordable group rates.

When you choose CBR, you'll be covered by a carrier rated "A" or better by A.M. Best Company. And, you will have the added advantage of being insured for your "own occupation".

You'll also enjoy the convenience of working with CBR, a company that has been serving the insurance needs of Pennsylvania professionals for over 65 years.

IS THE AMA LOSING PERSPECTIVE?

James S. Todd, AMA executive vice president, said recently, "To date, no one has proved any one best way to deliver health care, and we have become a little bit tired of zealotry on both sides of the aisle" [AMNews, March 27, 1995]. Somehow, Dr. Todd has missed the point, and his stewardship is warped in quite the wrong direction.

In our opinion, the best way to practice medicine would be to have all physicians educated at government expense and to have all doctors live permanently in hospitals, available at all times, and provided with room, board, laundry, and Prozac. Unfortunately, medicine is still not an absolute calling; it is still a profession—although day-by-day it becomes closer to a job.

Dr. Todd and the AMA have been actively failing to recognize that the AMA was, before Dr. Morris Fishbein, an organization of professionals, and one of its purposes was to promote

the professional well-being and independence of the physician. Dr. Fishbein changed all that, Dr. Sammons followed suit, and Dr. Todd could care less—as long as he has job security.

There have always been physicians who preferred to be salaried, and that's fine, as long as there is a viable option to it. The growth of HMOs and other managed "care" groups, however, is reaching monopolistic proportions, and those organizations have no dedication to physicians' well-being, or even the well-being of clients, as long as the latter receive sufficiently adequate service to continue buying the package. I am sorry if this zealotry on this side of the aisle is offensive to Dr. Todd, but he should be actively opposing the industrialization of medicine, not playing footsie with the Group Health Association of America (GHAA) and the Health Care Financing Administration (HCFA).

Fort Wayne, Indiana

THE JOB'S NOT OVER TILL THE PAPERWORK'S DONE

At some time or another, we all face a similar situation. A long, hard day comes to an end, and we are confronted by a mountain of paperwork awaiting completion. A deep sigh later we begin, hopeful that our clerical duties will accomplish something meaningful.

I recently had the opportunity to review the medical record of a patient hospitalized for acute renal and respiratory failure. During the illness, no GI signs or symptoms were present. After a prolonged and tedious hospital course, the patient was discharged in stable condition to his home. In my opinion, the attending physician rendered excellent care. Therefore, you can imagine my surprise when I learned that the Keystone Peer Review Organization (KePRO) had filed a "Notice of Quality Concern" five months after discharge.

In its allegation, KePRO raised the following concern: "The patient had no bowel movement prior to discharge. This was not acknowledged, evaluated, nor addressed with a treatment plan." The attending physicians dutifully responded in writing to this charge. Eventually, the case was evaluated by a "KePRO physician specialist" who determined that no quality concern existed because "the patient possibly had a bowel movement that was undocumented in the nursing notes."

It required three letters and two levels of KePRO review to resolve this controversy. In fact, over 1,100 words have been dedicated to this issue. Such "meaningful" dialogue adds to the cost of health care while contributing little to improving its quality.

There are many cost-effective ways to improve the quality and utilization of health care services in Pennsylvania. A federally funded BM patrol is not one of them.

Carlisle, PA

A Week in the Life...

Steven Mandel, MD, a Philadelphia neurologist, writes:

My daughter asked to spend her spring break seeing patients with me in my office and in the hospital. She was fascinated by the scope of neurology advances and the understanding of multiple sclerosis, movement disorders, and in the evaluation of patients with sleep disorders. She became intrigued with those who snore, a narcolepsy patient with hypnagogic hallucinations, and those with excessive daytime sleepiness.

After spending the week, I asked her whether she would like to write about any of her experiences. She told me that she enjoys writing poetry. She has expressed an interest to become a physician because, she says, "I want to help people."

Her poem follows.

Dreams

Part future, present and past; or are they?

Life's biggest mysteries. A problem to be solved from the minute our head touches our pillow to the minute our cloudy eyes open to the fresh start of tomorrow.

Only our brains have the power to think their ways through life—whether we are conscious or unconscious, asleep or awake—no one knows.

It's up to you to find out what lies beneath your skin and skull.

Dreams.

A path through eternity. A journey to the supreme being more than one million light years away.

Taking a huge step inside of you.

In search of something you've always wanted to know.

Controlling our minds.

Taking over the world.

Dreams.

What do they mean?

Elisabeth Mandel
Age 12

Coping with Kaleidoscopic Change

Maria T. Montesano
Assistant Managing Editor

Nearly 300 people attended the Society's annual Leadership Conference, held May 2-3, 1995, at the Harrisburg Hilton and Towers. This year's theme, "Coping with Kaleidoscopic Change," was developed by the Leadership Conference Committee to portray the constantly changing images of the health care marketplace in Pennsylvania, as well as nationwide.

As one committee member explained, "As images change with only the slight bump of the hand, we see ourselves readying to move with those images, and also being prepared for what might be the next image." One medical journalist, one medical leader, one medical academician, and one federation representative offer their perspectives in this recap.

Health System Reform: Still Searching

Mr. Levine

CNN Medical Correspondent Jeff Levine opened the Society's annual Leadership Conference with encouragement—that people are still thinking about the prospects for health system reform. "I have been feeling a little bit like the Maytag repair-

man," he said, "wondering if the phone was going to ring after the crash of last year's debate over federal legislation to overhaul the system."

A veteran of CNN since it signed on in 1980, Levine has worked with the network's medical unit for more than a decade, currently covering medical legislation and regulation activities in Washington. His keynote address focused on the past, present, and future of reform efforts.

"There is a certain irony in discussing health care reform here in Pennsylvania," Levine began. "It was here, of course, that Harris Wofford put the issue on the map in 1991 in his Senate victory...Ultimately, Bill Clinton picked up that theme, and it turned out that the push for comprehensive reform was disastrous for both politicians."

The problem with Clinton's reform plan, according to Levine, was the dichotomy between the complexity of the

plan and the oversimplification of its presentation. Further, neither political party was completely satisfied with the plan. Instead of going to Congress and asking for a bill including his provisions as a starting point, Clinton presented a plan all his own. The result, according to Levine? The Health Security Act was "orphaned" on the hill.

Inside sources say they don't expect to hear anything before the Republican plan comes out, he added. What has been heard is that the White House continues to push for expanded coverage for children, and for long-term care relief. As for comprehensive reform, though, White House pressure remains on the Republicans.

The White House is also pressuring Republicans against Medicare reform as a separate reform, but continues to advocate comprehensive reform. However, Levine noted that in Washington, "Comprehensive reform is out; incremental reform is in." He said, if Medicare doesn't shrink, it will be surprising.

Now that the first 100 days are complete, what can we expect from Congress? Levine looks for a push toward more and more managed care—for the elderly, the poor, etc. He also expects the ultimate battle will be between HMOs and patient choice, via the Patient Protection Act.

"Health care problems are like Russian nuclear weapons," Levine concluded. "They really have not gone away." Statistics show that 40 million Americans still lack health insurance, and health care remains at 14 percent of the gross national product. With those numbers, he believes health system reform is inevitable—whether it's now or later, Medicare reform or comprehensive reform, or for children or Medicaid, or managed care, or community rating.

Our world is changing in substantial ways, he said, and we're still left with the question of health system reform for "Joe America": "Who's going to take care of me?"

California's Experience with Managed Care

Dr. Ogrod

Eugene S. Ogrod, MD, president of the California Medical Association, jokes, "Whenever there's change going on in an environment, one of the first things that happens is a Californian gets imported to speak."

Imported to speak to this year's Leadership Conference attendees, Dr. Ogrod offered his experiences with managed care in California, and how his state's experience is relevant to Pennsylvania.

Managed care began on the West Coast more than a decade ago, and there are many lessons to learn, according to Dr. Ogrod. First, he said, "Don't count on it never happening...Large companies do get to small towns." Yet, it's not necessarily something to be fearful about, he said. Instead, he believes physicians must "make a decision to deal with it, [or] be left out of the marketplace."

"Competition in the private marketplace is very distressing to physicians," Dr. Ogrod said. "Doctors talk free market, but we really don't like it very much. We like the idea of stability, security, long-term working relationships with our patients; unfortunately, that is going to be more difficult to do in the modern managed care environment."

But the managed care environment offers many advantages to practices. He said such systems *do* save money, though maybe not as much as expected; and lengths of stay decrease, allowing physicians to see more patients.

Also, he praised the concept of practice audits: "Very silly things occur initially when employers look at the quality of the practice environment, but better things follow." He said it is no longer enough to just look at costs. Instead, look at the value of care to the patient—patient satisfaction.

"Getting behind what we're *not* doing is the challenge," he said. "You can't always measure care, but you can measure if patients are happy with their doctor." That, he said, is the world of audits. Thus, productivity has increased, with physicians finding new ways to maintain better health of patients.

Further, keeping data on physicians is no longer an issue. Data will be collected, and according to Dr. Ogrod, such information is imperative to physician groups. To know the number of referrals, what the

This slide, shown to Leadership Conference attendees by California Medical Association President Eugene S. Ogrod, MD, summarizes "a batch of slides to save you from looking at a bunch of numbers." In his exact words: "It tells you what's happening in our environment. Doctors' incomes are going down, HMOs are going up, legislation—we track about 800-900 bills on health a year, and the costs... and the physician response has been...well...[he moves his hand in a 'so-so' motion]."

costs are, and how the lab is used is meaningful to managing care as well.

Finally, he said that hospitals and physician employers are learning that without physicians who manage health care appropriately, systems fail. That means physicians still occupy privileged positions in California, in terms of income and practice environment.

Can physicians cope with the infiltration of managed care? Dr. Ogrod says yes. "There's no mechanism, no plan that can't be done badly in managed care, but there are a lot of things you can do well in managed care that leave you with a practice that can do well." He concluded, "Despite all of the changes and all of the problems, I can go back to my community and talk to physicians and find that, like I do, they still enjoy practicing medicine. It's just different than it was 10 years ago."

Medicine's Dilemmas: Infinite Needs Versus Finite Resources

Dr. Kissick

Can the United States provide a health care program that offers a comprehensive package of the highest quality health benefits to all Americans while containing health care costs? University of Pennsylvania professor and Society member William L. Kissick, MD, DrPH, says no. "No society in the world has sufficient resources to provide all the health services its population is capable of utilizing."

Dr. Kissick, involved with health policy for more than three decades, told confer-

"[Physicians] must make a decision to deal with it, or be left out of the marketplace."

—Eugene S. Ogrod, MD

ence attendees he has seen extraordinary change in that time span. One of the developers of Medicare, he noted the program is often called a "Herculean political achievement." But he calls it modest.

"All we did with Medicare was replicate the open-ended financing for reimbursement of Blue Cross and Blue Shield for 10 percent of the population using tax dollars." Yet, he said, they made three mistakes: They misjudged trends in 1) technology, 2) demography, and 3) utilization.

"He who assumes the risk, calls the tune."

—William L. Kissick, MD, DrPH

Add to that what Dr. Kissick calls "one of the most important facts of 1994"—that both Richard Nixon and Jacqueline Kennedy Onassis died with living wills—and you have a feel for some of the many dilemmas medicine faces ahead. How do we cope with that? Dr. Kissick uses humor and innovation. Here is a sampling from his speech:

- Why do we continue with employer mandate? Because we've been doing it for six decades.
- We're on the way to health care as 20 percent of the gross domestic product by the year 2000, at which time the U.S. will be spending three times the amount spent on education.
- Regarding the Health Security Act: "I stand before you as one of the few individuals in Western Civilization who has

read all 1,342 pages. Why did I read 1,342 pages? So I can stand before an audience and say, I'm one of the few people in Western Civilization who has read all 1,342 pages. Did I remember them? No way. Did I understand them? No way. Did I find some inconsistencies? Yes."

• Health care reform is a contact sport—rugby: "They take away your helmets, they take away your shoulder pads, they take away your hip pads, they take away your thigh guards. You run around the field in your underwear in a state of abject terror. There are no timeouts. They drag the dead and wounded from the field, and the game goes on. Moreover, it's not played on the gridiron. It's played on the iron triangle of health care—cost containment, access, and quality."

• "He who assumes the risk, calls the tune."

• "There is no quick-fix in health care." Dr. Kissick's suggestion: "After the federal government legislates a health care policy, it should be implemented through collaboration with state and local initiatives, for such programs have been built on an understanding of regional needs, expectations, and cultural diversity."

• Quoting Ben Franklin and referring to the physician community: "Gentleman, if we do not hang together, assuredly we will all hang separately."

The State of the State

Mr. Mecum

Roger F. Mecum, the Society's executive vice president, says the current state of the state is "as though all fixed points are in some form of motion." He spoke about the current health care marketplace in Pennsylvania—what is happening and why—

and overviewed Society strategies to deal with this changing environment.

"Being against managed care seems to be like being against gravity," Mecum said: "It seems as though it's here to stay." More and more group practices and networks are forming, physicians are selling their practices, hospitals are consolidating and some are closing, there is a change in patient mix, the physician-patient relationship is changing, and some physicians are being denied access into managed care plans. "The momentum is picking up," he said, citing that Pennsylvania now ranks seventh in the nation in growth of HMOs, "and expert opinions vary about where the dust will settle."

Ronald J. Fasnacht and Gordon H. Smith, Esq., led two of the six workshops offered to attendees on the second day of the Society's annual Leadership Conference. Fasnacht, a health care consultant, presented "Managed Care—The New Career Paradigm." Geared toward young physicians, the workshop included an overview of the current health care marketplace and a discussion of what it means for physicians to be "employees." Smith, executive vice president of the Maine Medical Association, discussed New England's experience with practice parameters. Other conference topics addressed forming practice groups, developing leadership skills, using electronic information, and handling antitrust issues.

Mr. Fasnacht

Mr. Smith

Why is all this happening? Mecum pointed to market reform and notes that patients are becoming more comfortable with managed care. He also said the incentives are appealing to some physicians. But the bottom line is: "Twenty-five percent of future health care dollars are up for grabs."

After a brief analysis of the emerging health care marketplace in Pennsylvania—including items from "Integration Insider" on page 18—Mecum discussed the Society's response to these changes. "The ballgame is changing...but so is the ballpark," he said.

To help physicians through the wave of change, the Society has initiated several strategies, including expanding education

and advocacy, and creating the PennMed Member Services Company (PMSCO) to help physicians organize effectively for future success.

Also, the Society is exploring new ways for physicians to relate to the organization. "The future of this organization must reflect the structure and the culture and the economics of the future, but it will not happen [unless it becomes] a priority for all of us," Mecum said.

His most serious concern? Fragmentation. "If we could just come a little more together—cooperatively, creatively, and aggressively," he said, "the state of the state for physicians will be a lot brighter in the years to come." ◊

Williamsport Physician Honored for Community Devotion

The Pennsylvania Medical Society awarded its second Physician Volunteer Award to Kenneth L. Cooper, MD, a retired obstetrician/gynecologist from Williamsport. The award, presented at the Society's Leadership Conference in May, honors Dr. Cooper's lifetime of unselfish devotion to his patients and his community.

An Army veteran and graduate of Temple University School of Medicine, Dr. Cooper spent all his working years in

Williamsport. His work in the medical community is described as "exemplary," including serving as president of the medical staff and on the board of managers at Williamsport Hospital. His volunteer service for 20 years as director of a family planning clinic earned him honors on several occasions.

Also heralded as a leader in his community, Dr. Cooper has served on the board of the James C. Brown Library for nearly two decades and led a \$1.4 million capital campaign to renovate the library and improve its book collection. His commitment to the library extends beyond the library's four walls, as passers-by will tell you—they also see Dr. Cooper on his knees caring for the flowers and shrubs on the library grounds. Library Director Janice Trapp says, "Dr. Cooper works for us in both his dungarees and in his tuxedo."

He has also been a member of the Brandon Park Commission since 1972, chairing the commission since 1990. A 100-year-old park in the center of Williamsport, Brandon Park recently was revamped with money and volunteers organized by Dr. Cooper. "Citizens of this community have not only been served by Dr. Cooper during the past, but will forever benefit from his vision of Williamsport's future," says GERALYN L. FAUSNAUGHT, a member of the park's Beautification Committee. "Through the seedlings planted in Brandon Park, to the experience of caring leadership planted into the lives of those who have worked with him, Dr. Cooper has promoted Williamsport's proud past and promising future."

Further, he was a long-time participant in the Lycoming County Chapter of the American Cancer Society, and is active in his church and with many other community projects.

When asked what has given him the greatest satisfaction from being a doctor, Dr. Cooper says, "Adding happiness to families, being a good listener, and helping people." As for receiving the Physician Volunteer Award, he says, "I am very thankful and appreciative of the Society in making this award possible, but you have to realize that it took many, many people for me to accomplish all these things." He explains, "Without volunteers, it would have been nothing...It's working together that accomplishes big things."

"If we could just come a little more together—cooperatively, creatively, and aggressively—the state of the state for physicians will be a lot brighter in the years to come."

—Roger F. Mecum,
State Society EVP

Patients Equate Quality with Service

Michael P. Lance

There have been many attempts, with varying levels of success, to define, monitor, measure, and ensure quality of health care; but when it comes right down to it, patients advocate this equation: Quality = Service.

A definition of health care "quality" has been difficult to pin down. Until now, most of the focus has been on the technical component of quality—the "quality care" aspect of medicine. Efforts have concentrated on ensuring that providers of health care at all levels of medicine, including nurses, medical technicians, physicians, and medical facilities, have the necessary training, skills, personnel, and tools to provide the safest, most modern health care and the best possible outcome for patients. This effort has been very successfully controlled by licensing and monitoring agencies.

Therefore, most patients assume that quality *care* will be provided by medical institutions or health care providers. However, the real grounds upon which patients judge quality is *service*.

Literature and periodicals today appear to reflect a renewed awareness of quality in services and products. In my early days of managed health care, the indications were that success was driven by the three "Ps": price, price, and price. It is evident that the consumer of the '90s is still influenced by price; however, the three "Qs"—quality, quality, and quality—are becoming more important to ensure consumer satisfaction and loyalty to products and services.

In health care, there will always be the need to provide quality care. Some of the gurus of medicine are touting the importance of "quality outcomes" as a measure of quality in the future. I feel that quality outcomes always have been and always will be important in medicine, particularly for patients requiring surgery or with significant illnesses.

However, the ability to "measure" quality outcomes with any level of validity, reliability, and accuracy would require considerable resources and dollars. Perhaps we will never achieve absolute validity, reliability, and accuracy in these outcomes measurements.

The vast majority of health care consumers do not require surgery, nor do they have significant illnesses. For those millions of people, the most important aspect of quality in their medical care can be defined as *quality service*.

Fifteen of my 28 years in health care were on the operation side of managed health care, where I was responsible for providing the health care delivery system for managed care programs. We frequently obtained feedback from patients as to whether we were meeting their health care expectations and needs. Virtually all health plans today perform some sort of patient satisfaction survey to obtain feedback.

As the concept pertains to physician services and physician organizations, the following represents a definition of "quality services" from the patient's perspective:

- A large selection of physicians from which to choose, in close proximity to their homes or work places.
 - Courteous, sensitive, and caring office staff and medical personnel.
 - Ease in scheduling appointments.
 - Ease in checking in and out for office visits.
 - Appointment availability, particularly for same-day illnesses with their primary care physicians. Many medical groups have limited availability, which results in patients being seen in urgent care centers by physicians different than their own physician.
 - Timely and appropriate referrals to specialists and specialty procedures.
 - Short wait times in doctors' waiting rooms and exam rooms. Note: Patients will be more tolerant of unavoidable delays if they know the reason and expected length of the delay.
 - One-stop shopping for most medical services near or in one facility.
 - Ease of assistance with health insurance payments and claim forms.
 - Continuity of care. Many medical groups and staff HMOs have turnover of physicians resulting in a lack of continuity of care for the patient.
- For hospitals and their medical staffs, the following represents a definition of "quality service" from the patient's perspective:
- Providing a majority of hospital services in close proximity to where they and their families live.

Mr. Lance is chief executive officer, PennMed Member Services Company (PMSCO).

- Available and convenient parking.
- Convenient admission and discharge.
- Sensitive and caring hospital personnel who provide comfort and communication to the patient and help to alleviate fears.

- Ease and assistance in processing health insurance claim forms.

- Nutritious and appealing food options.

- Easy and timely access to emergency medical services. As in the physician's office, reasons for unavoidable delays should be communicated to the patient in a timely manner.

Quality is an individual perspective, so the importance of each of the above service issues will vary for each patient. However, successful health plans and physician/hospital networks will need to be aware of and address as many of these quality of service factors as possible.

Some models of health care delivery systems have certain advantages or limitations compared to others in their ability to address and resolve the "quality service" aspect of medicine. It is evident that the definition of "quality" in the '90s and beyond is and will be defined from the patient's perspective as "quality service." **O**

Surveys Measure Quality of Service

To measure your medical practice's quality of service, consider the Patient Satisfaction Survey published by the Pennsylvania Medical Society. A packet of 400 surveys costs only \$40 for Society members. For information, call the Department of Physician Services at (800) 228-7823 or (717) 558-7750, extension 1456.

SURGEONS: COULD YOU USE AN EXTRA \$10,000?

If you're a resident in surgery, the Army Reserve will pay you a yearly stipend which could total in excess of \$10,000 in the Army Reserve's Specialized Training

Assistance Program (STRAP).

You will have opportunities to continue your education and attend conferences, and we will be flexible about scheduling the time you serve. Your

immediate commitment could be as little as two weeks a year, with a small added obligation later on.

Get a maximum amount of money for a minimum amount of service. Find out more by contacting an Army Reserve Medical Counselor. Just call:

Analysis of the emerging health care marketplace in Pennsylvania.

This ongoing column, introduced last month, updates Pennsylvania physicians on the state of managed care in the commonwealth. News, divided regionally, is derived from press reports. For more information about this topic, call the PennMed Member Services Company (PMSCO) at (800) 228-7823 or (717) 558-7750.

- HealthAmerica will waive its exclusive-use clause and many fees so faculty and staff at the University of

Pittsburgh can continue seeing HealthAmerica doctors. The new policy, which takes effect when HealthAmerica's contract with Pitt ends July 1, applies only to Pitt faculty and staff. As reported last month, the university has contracted exclusively with Blue Cross of Western Pennsylvania for health insurance for its employees. *[Pittsburgh Post Gazette]*

- The University of Pittsburgh Medical Center (UPMC) in late April opened a primary care health center in Greensburg. *[UPMC news release]*

- St. Francis Health System, Pittsburgh, and D.T. Watson Rehabilitation Hospital, Sewickley, have entered into a networking arrangement and will evaluate the future viability of establishing an affiliation agreement. Under the terms of the networking agreement, St. Francis resources and expertise will be made available to D.T. Watson as needed. *[St. Francis Health System news release]*

- The Hospital Association of Pennsylvania (HAP) has created the Pennsylvania Institute

for Healthy Communities "to work toward a new health care system that puts the needs of people ahead of the financial needs of hospitals." The institute will fall under HAP's new holding company, Health Alliance of Pennsylvania. John A. Russell will head the new venture; Carolyn F. Scanlan, former executive vice president and chief operating officer of the Healthcare Association of New York, succeeds Russell as HAP president. *[HAP news release]*

- Horizon Healthcare Corp., a nursing home chain based in Albuquerque, New Mexico, plans to buy Continental Medical Systems, based in Mechanicsburg, in a stock-swap deal valued at \$502.1 million. The merger requires approval by stockholders of both companies and is subject to regulatory review. *[Patriot News, Harrisburg]*

- Mercy Health System of Northeastern Pennsylvania has developed a new strategy to remain competitive in its changing marketplace. First, it has created Mercy Managed Care, a physician-hospital organization representing some 500 physicians, to negotiate contracts with HMOs. Also, Mercy has formed First Choice, a preferred provider organization offered to self-insured employers in the region. *[Modern Healthcare]*

- Franciscan Health System, Aston, and two other Catholic health care organizations—Catholic Health Corp., Omaha, Nebraska, and Sisters of Charity Health Care Systems, Cincinnati, Ohio—have signed a letter of intent to

consider consolidation, with final agreement expected by the end of the year. Franciscan Health System owns and operates a number of health care facilities nationwide, including in Pennsylvania: St. Agnes Medical Center and Nazareth Hospital, Philadelphia; St. Mary Medical Center, Langhorne; St. Joseph Medical Center, Reading; and St. Joseph Hospital, Lancaster. *[Philadelphia Inquirer]*

- The latest report card on the financial condition of Pennsylvania hospitals reveals that a growing number of Philadelphia-area hospitals are losing money as operating margins continue to decline. *[Philadelphia Business Journal]*

Such news is not surprising and, in fact, is expected to be a national trend. Michael P. Lance, chief executive officer of PMSCO, explains: "In a more mature managed care environment like Philadelphia, the need for hospital services decreases."

- The University of Pennsylvania Health System and Presbyterian Medical Center, both of Philadelphia, have signed a letter of intent to merge. *[Philadelphia Inquirer]*

Facts, Figures, Etc.

- Almost three-fourths of managed care organizations pay their primary care physicians under some sort of capitation arrangement, according to preliminary results of an American Society of Internal Medicine (ASIM) survey of managed care plans. More than half also apply capitation payments to their specialists. *[ASIM news release]*

Why Do 60,000 Doctors Trust Us With Their Professional Reputations?

In an era of "not if, but when" a doctor will be accused of malpractice, your choice of professional liability coverage is extremely important. We know that *any* allegation can be devastating to both your professional reputation and your personal assets... making the company you choose critical to your future well-being. Many factors should be taken into account when making a decision.

Consider our financial strength and stability. We are rated A+ (Superior) by A.M. Best and AA (Excellent) by Standard & Poor's. No other company with an exclusive focus on the needs of the health care community has higher financial ratings.

Look at our experience. For nearly a century we have specialized in defending and protecting doctors. No other company has **successfully defended** more than 180,000 malpractice claims.

Local service is important, too. Our General Agents and Field Claim Managers work with you on every allegation. They average more than 15 years experience working with doctors and the legal system.

Why do more than 60,000 doctors trust their professional reputation and personal assets with us? No other company combines nearly a century of experience with financial strength and the local service provided by The Medical Protective Company.

FDA CERTIFICATION REQUIRED FOR MAMMOGRAPHY CLAIMS

Effective this month, all claims received from Medicare physicians and facilities that do not report their Food and Drug Administration (FDA) certification number for screening and diagnostic mammographies will be denied, according to Xact Medicare Services.

The Mammography Quality Standards Act requires all Medicare facilities providing mammography services to meet national quality standards. Physicians and facilities are required to have an FDA certificate to continue operation.

The FDA now issues a six-digit certification number, which replaces the 10-digit number previously issued by the Health Care Financing Administration (HCFA). Xact says the six-digit number should be reported in the following locations for screening and diagnostic mammographies, regardless if billing is for full service or a component:

- block 32 of the HCFA 1500 claim form;
- Record FA0 positions 142-151 of the National Standard Format (left justified space filled);
- Record G positions 137-146 of the Proprietary Format (left justified space filled); or
- 2-180, Ref Segment, 02 Data Element of the ANSI Format.

For additional information about certification, or to obtain your six-digit certification number, call the FDA Hotline at (800) 838-7715. If a new provider has been added to your facility, or provider information has changed, write to Xact's Provider Data Services Department at P.O. Box 898942, Camp Hill, PA 17089-8842.

TRANSPLANT DRUG COVERAGE CHANGES

Coverage for immunosuppressive drugs, initially established by OBRA 1986, has until recently been limited to one year after a covered organ transplant. OBRA 1993 authorized a phased-in extension of the benefit from 12 months to 36 months. Due to the provisions of the law and subsequent technical amendments, over the next few years the length of coverage for a particular beneficiary will be determined by the month of

discharge following a Medicare-covered transplant.

The chart at right associates the month of discharge from a covered organ transplant with the total number of months of coverage. For example, if the patient was discharged on January 1, 1994, coverage would be for 18 months and would end on June 30, 1995. If the patient was discharged on October 15, 1994, coverage would be for 27 months and would end on January 14, 1997.

Coverage for beneficiaries whose dates of discharge from the hospital following a covered transplant was on or before July 31, 1993, is limited to one year. Effective January 3, 1995, claims processing systems have been changed to accommodate the law and technical amendments to process claims for covered transplants with hospital discharge dates of August 1, 1993, and thereafter.

For beneficiaries who are eligible for the extended coverage, claims which have been submitted and were denied may be resubmitted, or if a claim was not filed, an original bill for a previously unbilled month (1994 or 1995) may be submitted.

The dates of service must not extend beyond the authorized period of extended coverage, and the total months of coverage defined by the law and technical amendments may not be exceeded.

Tell Us Your Stories of Managed Care Interference

The Society has long argued the need for legislative and regulatory safeguards to protect patients from managed care policies that inappropriately deny payment for medical services. The most effective support for these arguments comes from real-life examples, which the Society is collecting through this new initiative.

If you have a story you would like to share that may be convincing to non-physician audiences—legislators, regulators, the media, and the general public—we'd like to know about it.

To guide and ease your efforts, the Society has developed a Quality Alert Form (see opposite page) to be published in *Executive Report* and *PENNSYLVANIA MEDICINE*. The Society intends the form to be user friendly and not another hassle for physicians; if you have suggestions about how to improve the form, we'd like to hear that too.

Fax or mail completed forms to Society headquarters at the address or number listed at the top of the form. Direct any questions to Dennis Olmstead in the Department of Medical Economics, Ext. 1483.

Quality Alert Form

How and Why to Use This Form: Use this form to document real-life examples of managed care practices that jeopardize quality of care. The Society is collecting these examples to prove the need for managed care safeguards. Information revealed on this form or during a follow-up investigation may be shared with government officials and the public. Please exclude any information that may identify a patient to assure patient confidentiality.

What is a "Quality Incident?": A quality incident occurs when a managed care plan denies or unduly delays medically appropriate care or engages in conduct that could result in a quality or access problem. Prospective payment determinations are considered care decisions—as the patient often elects not to proceed absent third-party coverage. Quality incidents also can occur in other managed care contexts. The payer's conduct may send the wrong message or otherwise encourage inappropriate provider behavior. Network exclusions also can adversely impact geographic and specialty access. Use a separate form for each incident or practice.

Please check the relevant boxes below to describe the incident or practice.

**Please explain below*

Utilization Review Problem

Type of Review

- ☐ Prospective review
- ☐ Retrospective review
- ☐ Concurrent length of stay
- ☐ Second opinion
- ☐ Case management
- ☐ Other*

Incident

- ☐ Service or procedure denied
- ☐ Site of service denied
- ☐ Premature discharge
- ☐ Other premature termination of care
- ☐ Specialty referral denied
- ☐ Untimely approval resulting in delay of care
- ☐ Approval only after "hassle"
- ☐ Other adverse action*

Cause of Problem

- ☐ Secret criteria
- ☐ Inappropriate criteria
- ☐ Non-physician reviewer
- ☐ Reviewer not in active clinical practice
- ☐ Reviewer not licensed in Pennsylvania
- ☐ Reviewer lacked appropriate specialty expertise
- ☐ No opportunity to talk to reviewer
- ☐ Incomplete review of record
- ☐ No opportunity for appeal
- ☐ Inadequate explanation of decision
- ☐ Not able to contact for timely decision
- ☐ Other cause*

DRUG CENTER OFFERS QUINOLONE UPDATE

The Society's Center for Professional Drug Education and Information recognizes that physicians consider various factors when choosing an antibiotic. We would like to briefly discuss why quinolones are not a first-line therapy for uncomplicated urinary or respiratory tract infections, and when their usage is preferred.

Although reasons for not using quinolones vary from condition to condition, the prevailing reasons include:

- suboptimal clinical activity against pathogens such as *Streptococcus pneumoniae*,
- the unavailability of sufficient data about long-term safety,
- contraindication in children,
- increasing evidence of bacterial resistance in *Staphylococcus aureus* and *Pseudomonas aeruginosa* infections, and
- a higher cost than equally effective alternative antibiotics.

Conditions where quinolones are the *preferred* therapy include:

- osteomyelitis with gram-negative bacilli,
- cystic fibrosis exacerbations in patients without impaired lung function,
- invasive external otitis,
- bacterial gastroenteritis (requiring antibiotic therapy),
- traveler's diarrhea (requiring antibiotic therapy), and
- eradication of the *Salmonella* carrier state.

The Center for Professional Drug Education and Information provides timely, credible, unbiased drug information to physicians. We currently have cost comparison charts for quinolones and other drug classes available in both wall and pocket card sizes. To get your free copies and have your name placed on our mailing list, call (800) 228-7823, or fax your request to (717) 558-7848.

Source: Prescription Drug Education Project

Q&A: DRUG UTILIZATION

The Center for Professional Drug Education and Information receives numerous inquiries from physicians about drug interactions, side effects, and other drug-utilization issues. In an effort to share this information, the Center selects a question of general interest to appear in this

column each month. The response, prepared by our clinical pharmacist, Brenda Trimmer, RPh, FASCP, is based on an abstract of the latest scientific literature that has been developed with input and knowledge of experienced clinicians. If you have a question that you think would be of general interest, please contact the Center at (800) 228-7823.

Q: Ketoconazole appears to interact with many anti-ulcer medications. What is the effect of these interactions, and how can they be managed?

A: Ketoconazole is an antifungal agent that requires an acidic gastric environment for absorption. Therefore, any medication that increases gastric pH may reduce ketoconazole bioavailability. Such medications include H₂-antagonists, antacids, and omeprazole. Sucralfate does not affect gastric pH, but also may decrease absorption by binding to ketoconazole in the gastrointestinal tract. If both interacting drugs are needed, the H₂-antagonists, antacids, omeprazole, and sucralfate should be given at least two hours after administration of ketoconazole.

Your Comments Are Welcomed

The Society's Center for Professional Drug Education and Information welcomes your questions and comments about issues relating to prescribing, drug interactions, or specific pharmaceuticals. Use this form to fax your questions and/or comments.

MOM AND DAD
I USE
DRUGS

UNFORTUNATELY, SIGNS OF DRUG USE AREN'T THIS OBVIOUS.

Fortunately, they're not invisible, either. That's why it's so important that parents know what these signs are.

The problem is that most parents don't know. And, as so often happens, their child's drug problem goes undetected.

It's senseless. Especially when the signs of drug use are right in front of the parent's eyes. Signs such as excessive secrecy, fewer visits home from college or a drop in school performance. Other signs are irritability,

weight loss, pupil dilation, and heavy usage of eye drops or nasal sprays.

These are only a few. There are many others.

If you're a parent, you must get involved. You can learn more about the signs of drug use by contacting your local agency on drug abuse.

Knowing these signs isn't a cure. But at least it's a start.

Volunteers Sought to Help Train More Generalists

Glenda Hostetter Shoop, MEd

Partnerships with physicians and their communities are critical for the success of programs to educate more generalist physicians, such as the initiative at Penn State's College of Medicine in Hershey.

Pennsylvania and the nation are facing an imbalance in the distribution of physician manpower. As a result, many people in our communities do not have ready access to primary and preventive health care afforded to others. Most urgently needed are more numbers and appropriate geographic dispersion of primary care physicians.

To meet the growing health care needs of our society, many academic medical institutions are emphasizing primary health care and the graduation of more generalist physicians by introducing and implementing more required primary care courses in their curricula. To effectively implement these courses, the schools realize that more educational experiences need to occur in community primary care practice settings. Partnerships with communities and community physicians are therefore critical for the institutions to meet this challenge, and physicians in these practice sites are being invited to serve as preceptors.

Penn State's College of Medicine, Hershey, responding to the challenge to increase the number of generalist physicians, was awarded one of 14 grants from the Robert Wood Johnson Foundation. This six-year project, called the Generalist Physician Initiative, has matching support from the Pennsylvania Department of Health.

The College of Medicine is moving to provide leadership in the education and training of generalist physicians through a multi-disciplinary approach in both education and research. The goals in this initiative are to:

1) have at least 50 percent of our medical students from each class select primary care careers; and

2) increase the number of residents entering generalist practices in Pennsylvania's rural, small-town, and underserved communities by the year 2000.

Primary care and generalist physicians

The Institute of Medicine (IOM) has defined primary care as an integrated, accessible health care system, whereby clinicians are accountable for addressing a large majority of personal health care needs. According to IOM, the primary care clinician develops sustained partnerships with the patient, practices in the context of family and community, and might or might not be a physician.¹

Physicians who provide primary care services are frequently referred to as generalist physicians. A generalist physician, often the entry point for a patient into the health care system, takes a comprehensive view of the patient, both medically and psychosocially, and coordinates the health care for the patient. They hail from the disciplines of family and community medicine, general internal medicine, and general pediatrics, and provide comprehensive, longitudinal health care focused on several roles:

- health promotion and disease prevention;
- assessing and diagnosing common symptoms and physical signs;
- managing common acute and chronic medical problems;
- identifying, when appropriate, patient referral to a specialist physician, i.e., cardiologist, surgeon, psychiatrist, gastroenterologist, etc.; and
- coordinating other health care services as related to the patient's care.²

Generalist Physician Initiative

Penn State's comprehensive plan to reach the initiative's goals addresses many points along the continuum of a career in medicine. It extends from college, through medical school and residency, into practice in the community. The plan is directed at several issues:

Ms. Shoop is academic and faculty development coordinator, Generalist Physician Initiative, Penn State's College of Medicine, Hershey.

- recruitment of qualified college students likely to enter generalist careers;
- comprehensive pre-admission and admission modifications in the College of Medicine to place emphasis on primary care, whereby primary care physicians have a greater participation in the selection process;
- restructuring of the medical school curriculum and supportive framework to emphasize interdisciplinary, coordinated courses—primary care courses will be introduced each year, and the content of these courses will be interrelated throughout all four years of medical school;
- provision of a primary care honors track for selected fourth-year medical students; and
- increasing the resident's exposure to generalist physicians and training in community-based ambulatory settings (especially in rural and medically underserved communities), and improving the coordination, collaboration, and communication among the residency programs in general internal medicine, family and community medicine, and pediatrics.

Developing community partnerships

Medical schools promoting primary care careers to their students are increasingly in need of community-based, primary care sites to provide clinical education and training. The Generalist Physician Initiative needs the support and participation of community primary care physicians throughout the commonwealth—especially in rural, small town, and/or medically underserved communities and cities—to fully develop and implement quality primary care educational experiences for our students. These practice sites are essential to introducing our students to primary care role models and to providing the opportunity for students to gain hands-on, primary care experience.

Representatives from the College of Medicine have been meeting with members of rural and medically underserved communities throughout Pennsylvania to develop clinical educational opportunities for medical students, identify scholarship funds and incentives for medical students and physicians entering primary care careers in these communities, and develop strategies to provide continuing education and practice support programs for the generalist physicians in these areas. Students work with community physicians as clinical preceptors through several required primary care courses.

The First Year Primary Care Preceptorship provides students with an organized,

one-week educational experience to observe a primary care physician in a community practice site. This is primarily an observational experience.

In the third year of medical school, each student is provided an opportunity to expand his or her awareness of the complexity and diversity of health care needs in a rural, small town, and/or medically underserved community. During this *Third Year Primary Care Clerkship*, the student spends one month working with a primary care physician. The student participates in the care of assigned patients while under the direct supervision of the physician preceptor.

This experience is intended to acquaint students with continuity of care and comprehensive patient management in primary care practices. A course syllabus was developed to give structure to the students' educational experience and give them a chance to reflect on that experience.

The Fourth Year Primary Care Selective expands the students' primary care educational experiences. The fourth-year medical student selects a one-month, primary care educational experience from a menu of primary care options: Indian health service, primary care sports medicine, community health/public health, palliative care, primary care practice, or other modules developed specifically for primary care. Allowing a student to choose from this menu gives him or her the opportunity to gain valuable insights into a primary care issue of particular interest. →

Nominations...

...for the 1996 **Robert Wood Johnson Foundation Generalist Physician Faculty Scholars Program** are now being accepted from deans of four-year medical schools. Fifteen four-year grants of up to \$240,000 are available. Call Nancy E. Foster, the program's deputy director, at (202) 687-2937 for application guidelines. Deadline for receipt of completed applications: September 20, 1995.

Applications are also available for the **Pennsylvania's Primary Health Care Practitioner Loan Repayment Program**, which is designed to create incentives for primary health care practitioners to practice in rural and urban Health Professional Shortage Areas (HPSAs).

Basically, under the terms of the program, government or commercial loans for actual costs paid for tuition, reasonable education expenses, and reasonable living expenses related to most recent clinical degree are qualified for repayment. In return, the primary care physician agrees to serve a minimum of three years in a designated primary care HPSA.

To be eligible, a primary care physician must be a U.S. citizen, a graduate from an accredited educational program, and eligible for certification/licensure in Pennsylvania. For additional information about eligibility, or for an application, call Leslie Best, the program's coordinator for recruitment and retention, at (717) 772-5298.

Be a preceptor

Penn State's Generalist Physician Initiative invites Pennsylvania's generalist physicians to volunteer to become preceptors in this innovative program. By being a preceptor, you will gain the challenges and rewards of:

- contributing to the education of future physicians;
- bolstering the presence of your profession, in your community and around the state;
- gaining a new perspective brought by a student presence in the routine of practice;
- teaching, which can be an enjoyable and stimulating experience;
- maintaining a link with medical school programming, resources, and faculty; and

• influencing student selection of a medically underserved area as a career choice.

If you are interested in providing a one-week preceptorship experience in your clinical setting to a first-year medical student, or a four-week clerkship experience to a third- or fourth-year medical student, please complete the form below and mail it to:

Prudential Home Mortgage 

AMA Financing & Practice Services, Inc.
A Subsidiary of the American Medical Association

*Eligibility requirements for 24 hour loan decision include: a 20% down payment, an overall good credit rating and a signed purchase contract. Single-family dwellings only. Condos, Co-ops, second homes and investment properties are excluded. Also, because your loan decision is not subject to an appraisal, you may want to consult your legal advisor to include an appraisal contingency in your purchase contract. Other conditions may apply, such as a maximum loan amount. Call your financing representative for details. Example — 30 year \$100,000 mortgage. Fixed, simple interest rate 9.5%, APR 9.704%, 360 \$840.86 monthly payments. **Not available in all states. The 15-day close is subject to certain conditions. An additional fee applies to Saturday closings. Contact a Prudential Home Mortgage representative for details. Home equity loans are currently being provided by Prudential Home Mortgage or its affiliate, The Prudential Bank. The Prudential Bank means The Prudential Savings Bank, F.S.B., The Prudential Bank & Trust Company or PBT Mortgage Corporation, all of which are subsidiaries of The Prudential Insurance Company of America. The Prudential Home Mortgage Company, Inc. 8000 Maryland Avenue, Clayton, Missouri is in the business of originating, processing, purchasing, and selling residential mortgage loans secured by liens on real property. The Prudential Home Mortgage Company, Inc. is an affiliate of The Prudential Insurance Company of America, doing business as P.H. Mortgage Company, Inc. in Ohio. New York Office. Expressway Executive Center, Suite 100, 48 South Service Road, Melville, New York 11747; Arizona BK 8408; Florida Licensed Mortgage Lender, Illinois Residential Mortgage Licensee, Licensed Mortgage Banker/New Jersey Department of Banking, Calif. Broker/Lender. All California loans are made pursuant to a California Department of Corporations Consumer Finance Lender license or Commercial Finance Lender license. Equal Housing Opportunity.

A New Approach to Health System Reform: Seizing the Moral High Ground

Joseph S. Silverman, MD

Has economic imperialism seduced physicians into viewing medicine as more of a business than a profession? Yes, says one State Society member. He proposes that doctors subordinate personal interests to the public interest, establishing a "Hoover Commission" to redesign health care.

Few of us went to medical school to run a business. Most of us had other motives. We sensed the respect and admiration accorded to scientific healers. We craved the chance to change lives for the better. Willing and able to learn, we conquered college examinations and MCATs, and advanced into medical school. When finally we entered practice, we, who had learned quickly and well as students and house officers, received new lessons from even more demanding and potentially punitive teachers: the economy's free market, increasingly intrusive and mistrustful governmental agencies, the formerly dormant tort system.

Out there in the "real world" we gradually embraced a new ideology, utterly American, utterly democratic, or so it seemed. Where in the past there had been report cards and grade point averages, now there were more concrete ways of scoring our performance—a rising annual income, a swelling investment portfolio, or, at the least, the shrinking of our student debt. Free Enterprise brought its own natural justice. The Free Market was wise. It was good.

Economic imperialism

For me personally, the decisive insight struck in November 1994. I was attending a lecture entitled, "King Midas in America: How a Free Market Ideology Undermines the Best Things in Life." Barry Schwartz, PhD, professor of psychology at Swarthmore College, was making a persuasive case for the power of financial rewards. Citing social psychological experiments and personal observations, Schwartz showed that children and adults, when compensated for performing tasks enjoy-

able to themselves, became disinclined to pursue those activities unless paid.

A child may enjoy playing Nintendo. But once he is paid for playing Nintendo, he is less inclined to play on his own "for fun." Children paid for reading books read with increased fervor but stop reading for pleasure. Schwartz's thesis is that preoccupation with the economic side of life squeezes out the intangibles that make life truly worthwhile. The "best things in life"—love and friendship, delight in learning, pleasure in skillful performance, pride in one's work, virtues of character, political freedom—may be brushed aside once financial rewards are introduced.

Shaken, yet stirred by this message, I took up Barry Schwartz's latest book, *The Costs of Living*. The author examines one arena of American life after another—commerce, professional sports, medicine, law, education, government, and close personal relationships. Everywhere he turns, he finds materialism expanding at the expense of idealism.¹

The devil in these details is identified as "economic imperialism." The term refers to the evaluation of human activities predominantly in terms of profit and loss. Economic imperialism holds that all decisions have economic consequences and, therefore, all decisions are fundamentally economic. The ethic of economically oriented endeavors is that profit is virtue, loss is, at the least, unfortunate, and at the extreme, shameful. Highly reimbursed activities are important. Less heavily reimbursed activities are less important.

There is a sad irony to the whole profit-as-virtue philosophy. People ordinarily assume that if they earn more, they will enjoy additional satisfaction. Schwartz shows that satisfaction actually depends upon relative rather than absolute well-offness. If you find yourself better off than your neighbor, you are satisfied. If you observe that your neighbor is doing better than you, you feel dissatisfied.

In the medical profession, Arnold S. Relman, MD, former editor of the *New England Journal of Medicine*, was among

Dr. Silverman is a practicing psychiatrist, Blair Medical Center, Altoona.

the first to sound the alarm, warning of the advance of economic imperialism. In 1980, Relman first addressed the issue of commercialism in medical care, and in 1982, he asked:

"Will medicine now become essentially a business, or will it remain a profession?...Will we act as businessmen in a system that is becoming increasingly entrepreneurial or will we choose to remain a profession, with all the obligations for self-regulation and protection of the public interest that this commitment implies?"

In 1991, Relman wrote, "Now our profession faces an ethical and economic crisis of unprecedented proportions, as it struggles to find its bearings in a health care system that has become a vast and highly lucrative marketplace."²

Illustrating Relman's thesis is the following first-person account of a physician's descent into economic imperialism, with which we can easily identify:

"The increasing technical intensity and busyness of medical practice has led to a preoccupation with better 'management' of the office. This has generally led to the hiring of additional nurses, technicians, and assistants; the physician suddenly finds himself the administrator of a large staff, a task he may never have expected and for which he was probably never prepared...So the physician scurries around from patient to patient, trying to do enough to pay for the office and the staff. Very soon, a business approach seems necessary just to keep afloat, and the physician has already become an entrepreneur....

"The entrance of corporate medicine into health care has exacerbated all these tendencies...If the physicians, as healers, do not want to measure their work by its economic production, their employers certainly do, and the attitude filters inevitably down....

"We physicians...are invested with enormous trust and confidence predicated ultimately upon our roles as healers who place the patient above our own personal needs. The monetization of medicine strikes at the heart of this trust."³

Other voices are beginning to be heard. D'Oronzio uses strong language and presents firm conclusions:

"This wedding of altruism and greed in health care delivery is on the rocks...Americans may have to reinvent some form of utopian direct altruism...a substantial shift from private interest-based thinking to...notions of community and commonality of concerns...Although there are nu-

merous 'special interests,' no combination is so great as the goal of the entire enterprise."⁴

At the same time, a new specialty has burgeoned: medical ethics, the fallout from explosions of controversy in case after nationally publicized case. The ethical dimension in medical practice has become increasingly relevant and salient.

Will doctors lead?

Physicians individually are blunt and uncompromising in their comments about what they don't like about the health care system, in both present and potential forms. Thus far, physicians have gone docilely along with more and more complicated, time-consuming, bureaucratically mandated billing procedures and practice constraints.

But if society needs a moral counterforce to curb economic imperialism, where is it more appropriate to start than with health care? And who would wield this counterforce if not physicians?

The mission of our profession is the promotion of the physical and mental well-being of each and every citizen. While attending to patients one by one, physicians are simultaneously mindful of a duty to the country—and humanity as a whole. Medical associations—highly democratic institutions devoted to actualizing the highest ideals of the profession—offer a mechanism for taking control of health reform. Even President Clinton's guru for health system "reform," Ira Magaziner, has encouraged us to do so.⁵ But as yet, physicians have not climbed to the moral high ground, where they would be strategically positioned to assume that control.

A new idea

I now call for the formation of a high-level commission of experts, sponsored by the American Medical Association and comprised of physicians and other health professionals, economists, political system experts, ethicists, lay persons, and patient advocates. Its mission: to propose changes in the delivery of health care.

The commission would specifically address the public interest, without reference to what is politically correct or what would benefit physicians or, for that matter, any other group. Only if commission members were united in this purpose could their deliberations be expected to yield results. The Hoover Commissions of 1947-1949 and 1953-1955, charged with the task of proposing improvements in the executive branch of the federal government, might offer a valuable model. →

"The Hoover Commissions of 1947-1949 and 1953-1955, charged with the task of proposing improvements in the executive branch of the federal government, might offer a valuable model."

To my mind, it is not difficult to imagine what the commission might find worthy among the myriad of proposals, comprehensive or focal, previously advanced by one group or another:

1) The commission would be free to turn to a potential remedy favored by many physicians,⁶ yet shunned completely by politicians—rationing of services, perhaps through the establishment of relative priorities. Ethical approaches to prioritization have already been put forth.⁷ The AMA, until recently unwilling to entertain the idea of rationing, has become more receptive.⁸ It is the need for cost containment that fuels the outcry for health system reform. If health care spending grew only as fast as the rest of the federal budget, the deficit would be halved in five years.⁹

2) With rationing in place, new standards could be set for lengths of hospital stay, focusing on humane rather than economic considerations.

3) The commission might call for the dismantling of the professional liability system, substituting perhaps a no-fault administrative system. The tort system takes an economic toll at every turn, and its often overlooked psychological consequences wound thousands of physicians each year.

4) The healing potential of the doctor-patient relationship is egregiously ignored in the present world of rapidly shifting health insurance networks. The commission could be expected to endorse a system that respects personal ties between patients and those who care for them.

5) Since judicial disapproval of "anti-competitive" practices would be no obstacle to the commission, restrictions might be placed on unproved and unscientific practices and devices.

6) The commission might advise restrictions on the marketing of health care.

7) Patent laws governing development of therapeutic drugs could be amended. In return for a lower profit market and restrictions on promotional expenditures, pharmaceutical manufacturers might be granted a longer period of exclusive rights to a new drug. Under the present 17-year exclusivity, companies have relatively limited time to recoup their investment and enjoy profits before the generic houses take over.

8) In dispute is the cost-effectiveness of managed care by remote reviewers. It is possible that in medicine, as in other situations,¹⁰ the cost of policing workers exceeds actual savings.

9) Practicing physicians often favor plans that give patients more of a financial stake in their treatment—copayment for services and drugs, medical savings accounts,¹¹ and taxation of employer-awarded health benefits.

10) What about optometric, podiatric, and dental care? What should be included in every person's basic benefits package? When it comes to defining the standard package, the commission might decline to hand down a judgment *ex cathedra*. Instead, it might see fit to establish a process for democratic and fair decision making.¹²

11) Integration of all governmental and extra-governmental health systems is a strong possibility. Still, it should not be presumed that the commission would end up with a single nationwide approach to health care delivery. The commission would be free to advocate experimentation "in the laboratory of the states," trying out specified options—rather than committing the entire nation to a program insufficiently tested.

The commission's conclusions, while not binding upon the medical profession or anyone else, would carry a strong moral imperative. Ultimately, the AMA House of Delegates would be asked to accept in principle as many of the commission's recommendations as possible—ideally, all of them. The House would then be requested to implement the recommendations in conjunction with other health professionals, and with governmental and other agencies.

Final thoughts

Over the last few years, a profit orientation has progressively become dominant in American medicine, displacing humane and professional values. In a sense, this restructuring of a doctor's work identity is consonant with a life keyed to external rewards.

To many physicians, then, my utopian dream of an ethically driven health care system is their worst nightmare. They would find no pleasure in the dismantling of what years of discipline and effort have won them. Winners usually see no need to change the game. But if, under the banner of economic imperialism, their victory, as Barry Schwartz indicates, is a Pyrrhic victory after all, then perhaps a climb to the moral high ground will bring the fulfillment they were seeking all along. ☉

State Society Trustee George R. Fisher, MD, offers a response to this article beginning on the next page.

Moral High Ground or Desert Isolation?

George Ross Fisher, MD

Joseph S. Silverman, MD, author of "A New Approach to Health System Reform: Seizing the Moral High Ground," pages 28-30, shared his article with several colleagues prior to publication. Among the comments, Dr. Fisher described the article as "certainly thoughtful." Yet, he says, "I unwillingly find myself on the other side of some of the issues presented." He explains in this response.

The question of whether the human condition is basically good or basically evil is an old one; and even the terms are probably inappropriate to modern ways of thinking. My own way of viewing the issue is that individuals generally divide up into two camps which appear to believe that people are basically good but corruptible, or else basically evil but controllable. The people who distrust everyone tend to be a little cynical and callous; those who trust everyone are constantly being betrayed, and so they tend to be bitter and authoritarian.

Let us regard both positions as illusions, or prejudices. There can be no doubt when civilizations adopt the Calvinistic or suspicious doctrine, they are more successful economically and possibly even spiritually than when they take the Tibetan or trusting position. Adam Smith was the first to notice this paradox, that a whole society collectively pursuing its individual selfish best interests will lead to the prosperity of the entirety.

The Libertarian view is that it will generally prove impossible to achieve a greater general good by intervening in the economy than by letting things be guided by the hidden hand of the marketplace. I realize this is not always a congenial philosophy; altruism and selflessness have something important to contribute. Nevertheless, the general lesson of economic history is that the Calvinistic illusion is almost always a more successful societal doctrine.

It is not necessary for me to argue the merits of laissez faire in medical economics, since people like Milton Friedman have so effectively convinced the current Congress. I am not sure just who convinced the business/employer community—possibly Ronald Reagan. But the combination of employer exasperation and Congressional zealotry now confronts the physician community with a revolutionary challenge to its traditional comfortable assumptions.

Because we are highly selected by the medical school admissions process, because we characteristically work inordinate hours without much complaint—and the health of the nation is obviously improving steadily—we have enjoyed the monopoly protection of restricted medical school enrollments, barriers to competitive access through the licensing process, and the provision at public expense of magnificent institutions to work in.

The business community is telling us they very much like what we have to offer, but the nation simply can't afford it. They readily acknowledge that physicians have been less abusive of the system than hospitals, limited licensed practitioners, and medical equipment vendors or drug manufacturers. Strong voices among them state the only hope for the system is for physicians to take charge. But their perception is, we are too comfortable and too conservative to do it unless we are threatened. So, we are experiencing quite a threat.

Notice that some people who are themselves making incomes in seven figures are saying we must get our costs in line. They do not object to our making high incomes; they are impatient with our letting the system of subordinates and vendors get so fat. They are particularly scornful of our reluctance to take financial risks.

I believe the business people think they are giving us the opportunity of a lifetime, but are not entirely certain we can shape up to the challenge. There is a story of Benjamin Franklin emerging from the final

Dr. Fisher, a Philadelphia internist, is the State Society's First District Trustee.

“Essentially, I believe we must face the challenge of playing by the new rules or find ourselves employees of those who do.”

day of the Constitutional Convention. “What kind of a government have you given us, Mr. Franklin?” called out an old lady. Franklin hesitated, and replied, “A republic. If you can keep it.”

That grim challenge may seem bracing to businessmen, but physicians are accustomed to a more protected security, as though becoming members of an educational aristocracy, we deserve to be protected from the more mundane competitions of a marketplace society. We tend to feel our hospitals are also entitled to privilege, but our opponents will have none of that. The hospitals have pushed the Robin Hood approach to the point where the Sheriff of Nottingham is determined to have a hanging.

When the business community learned about cost shifting by hospitals, there was an uproar; but, learning that hospitals defend the practice and intend to continue cost-shifting, businessmen have simply decided it means war. Physicians would be smart not to get too close to the targeted lynching victim. Curiously, drug manufacturers are not subject to the same animosity, because they pay taxes, take risks, and live by the law of the marketplace.

I’m sure you agree hospitals have not behaved quite so badly that they deserve extermination, and I would not argue strenuously that their protected monopoly is the whole source of medical cost escalation. Rather, I’m afraid both Dr. Silverman and I must recognize that last November, the country seemed to ratify the idea that it is unacceptable to have large portions of the economy operating in shelters protected from the invigorating cold winds of competition. And the country was equally clear in its rejection of centralized planning for one-seventh of the economy. I’m afraid that’s hard news for Dr. Silverman’s proposal for a national blue ribbon commission for health care. One man’s blue ribbon is another man’s political patronage.

Essentially, I believe we must face the challenge of playing by the new rules or find ourselves employees of those who do. Whether we would prefer a single-payer system, or a blue ribbon planning commission, or a return to business as usual is an issue which has been removed from the table. The issue may return to the table if this new marketplace networking turns out to be a failure, but I don’t believe the issue will leave us alone until the new networking has been given a fair shot.

As you can see, I have not directly answered Dr. Silverman’s thoughtful article, because the more important reality is that his proposals have no chance of acceptance until the market-based approach has received a fair trial, with the exposure of whatever flaws are in it. I was John the Baptist in the wilderness for 15 years, telling physicians they must get these costs down before they provoke a rebellion. Costs kept on escalating, and the rebellion is here. Now it is the turn of altruists and planners to spend some time in the desert. From experience, I can tell you it is lonesome out there.

Out of respect for Dr. Silverman’s opinion, let me speak more directly to what he says. I do not know Barry Schwartz, but since he is at Swarthmore, I presume he is familiar with the experience of the early Quakers in governing Pennsylvania. Eventually, the Quakers were forced to leave public office because of their inability to reconcile their peaceful principles with the need of the Western Pennsylvania settlers to be protected from Indian scalplings.

Arnold Relman, on the other hand, was in medical school when I was there; and he was at the University of Pennsylvania while I was on the faculty. Whenever he speaks with scorn of the medical-industrial complex, I am caused to reflect on the computer software industry, where it is pretty fair to say that people can always be found who will pay for a program if it is any good. Conversely, very few programs which are free are any good for anything.

Money may be the root of evil; it is also the common standard of value in society. I think it is more useful to distinguish between making money as a zero-sum game and making money from value-added activities. There are many ways of getting rich which do not involve taking away from someone else; generally speaking, medical care is such an endeavor.

The business community recognizes we are a value-added activity; their complaint is we wish to be protected from being the victim of zero-sum games. That is a luxury we have not earned. In their eyes, if we espouse collectivist ideas, they will sell us down the river. We are not overcompensated. We are ineffectual managers of the public’s money.

We are being offered control of the medical system. If we can keep it. ◊

BILLS ADDRESS DNR ORDERS, INSURANCE, PROTOCOLS

Health care was not a top concern during the first four months of this session, while the state House and Senate focused on special crime legislation. The House also has passed several measures developed from issues featured in the state-level Republican agenda and promoted during the fall campaign, and both chambers have begun private negotiations on Governor Ridge's 1995-96 budget. After a brief primary election recess, the legislators reconvened and are expected to continue weekly sessions until the budget is passed.

Among the nearly 2,500 bills introduced by state legislators this year, the Society has found 126 bills that relate directly to health care and the practice of medicine. Under close monitoring by the Society are:

House Bill 247, Neglect of Care-Dependent Persons: The Society is seeking an amendment which would include a lawful Do Not Resuscitate order as an "affirmative defense" to charges of neglect of a care-dependent person under the crimes code. The bill already offers protections such as compliance with an advance directive for health care, written instructions from the care-dependent person, and a durable power of attorney. At press time, this bill was on the Senate calendar.

House Bill 5, Affordable Insurance Measure for Family Health Care: State Representative Tom Gannon (R-Delaware) has introduced a bill which would provide for a minimum health benefit plan to be made available for working individuals and their families who otherwise would not be able to obtain such coverage. The bill is intended to cover small groups and businesses. Included in the bill are safeguards limiting exclusions for preexisting conditions, as well as other elements of patient protection language.

Dr. Hobart testified on behalf of the Society in support of the legislation at a legislative hearing, and the Society has offered several clarifying amendments. As expected, the insurance industry—including Pennsylvania Blue Cross and Pennsylvania Blue Shield—and the small business community are opposed to the bill.

If the bill is reported out of the House Insurance Committee, House

leadership is committed to bring the bill up for consideration. At this point, there appears to be little support for the bill in the Senate or with Governor Ridge, although that could change.

Senate Bill 460, Renal Dialysis Protocol: Although the Senate Public Health and Welfare Committee has approved this bill directing the Department of Health to implement a protocol for the re-use of dialysis filters, it is now stalled in the Senate Appropriations Committee. The prime sponsor is Senator Stewart Greenleaf (R-Montgomery). The Society has written to all members of the Senate opposing the bill because it would duplicate federal protections.

Direct any questions or concerns about these and other health care-related bills to the Society's Department of Legislative Affairs at (800) 228-7823 or (717) 558-7750.

DISCUSSIONS CONTINUE ON WORKERS' COMP ACT

Discussions continue between the State Society, insurance representatives, and the Department of Labor and Industry over promulgation of regulations implementing the medical provisions of Pennsylvania's Workers' Compensation Act. The department is attempting to address the issues raised by the Independent Regulatory Review Commission in an order disapproving the previously proposed regulations.

Society legal counsel have begun developing a complaint, authorized by the board, challenging the constitutionality of portions of the review process provided under the

act, especially the tolling of medical payments during the review of the necessity of the services provided. The Pennsylvania Osteopathic Medical Association and the Pennsylvania Academy of Physical Medicine and Rehabilitation also contributed funds to support a portion of the costs of this legal challenge.

We are awaiting formal response to the Society's demand for a change in Department of Labor and Industry policy with respect to the payment of the costs of the reconsideration reviews. Department officials have verbally indicated that they plan to reverse their previous position, which held physicians responsible for the cost of the review when the employee was the party requesting the review and was the losing party.

The department hopes to change its notification process to clarify the rights and responsibilities of parties to the reviews, and is also considering ways to limit the widely varying charges for such reviews. The Society threatened legal action if the department didn't alter its policy.

Society representatives continue to meet regularly with the department to address day-to-day problems experienced by physicians under the Workers' Compensation Act. The Society has also begun providing educational seminars to aid physicians' offices in coping with the act.

You can relay your workers' comp-related problems to the Society and request information by calling the Governmental Affairs Division at (800) 228-7823 or (717) 558-7750.

AMA Initiative Focuses on "What's Right" with Health Care Today

The American Medical Association has begun an initiative to bring attention to "what's right in our health care system and what dedicated health care professionals are doing 24 hours a day, every day, taking care of ill and injured people."

Opponents to reform of the U.S. medical liability system have begun an aggressive, self-serving campaign to undermine confidence in the health care system, according to the AMA. For instance, trial lawyers and others have begun circulating the "Casualty of the Day," a vignette designed to create the false impression that patients need to fear health care professionals.

The AMA says such an effort "is a disservice to the millions of dedicated health care professionals who are providing medical miracles every minute of every day." Its new campaign is meant to "provide some balance" and "recognize...what's right."

Diagnosing, Treating Depression in the Elderly

Maureen Hoepfer

Depression is a clinical syndrome prevalent in older adults. In this article, David Greenspan, MD, co-chair of the Psychiatric Physicians of Pennsylvania's Geriatric Psychiatry Committee, discusses the diagnosis and management of the depressed geriatric patient.

Depression is a common, serious, and potentially life-threatening illness that affects many older adults, according to David Greenspan, MD, director of geriatric psychiatry at the Institute of Pennsylvania Hospital in Philadelphia. Although depression in the elderly usually responds to treatment, he says, it often goes unrecognized. Left untreated, depression may lead to considerable morbidity and mortality.

"It's a very treatable illness in the young and old alike, so it's extremely important that physicians evaluating older patients make the diagnosis," he explains. "Approximately 80 to 90 percent of people should get better if the disease is properly treated. If not, patients could potentially go on for years without remission. Most importantly, if left untreated, depression can be deadly."

Dr. Greenspan cites a 1993 study of nursing home patients conducted by Barry Rovner, MD, of Jefferson Medical College of Thomas Jefferson University. Major depressive disorder was found to be an independent risk factor for mortality that increased the likelihood of death by 59 percent in the first year after diagnosis.¹ Depression also contributes significantly to the high rate of suicide among older adults. Suicide ranks among the top 10 causes of death in persons over 65 years of age. Elderly white males have the highest rate of suicide—three to four times that of the general population.²

Incidence among the elderly

Pennsylvania, with more than 2.4 million people over age 60, has the fourth largest elderly population in the country. Between 10 and 15 percent of these older

adults suffer from some type of depression, according to a 1992 study conducted by the State Society's Educational and Scientific Trust for the Pennsylvania Department of Aging. Three percent of this population manifest major depressive disorder. In nursing homes, the rate is 15 to 25 percent.³

Depression is the most common psychiatric disorder in the United States, costing society \$43.7 billion annually.⁴ According to the American Psychiatric Association, major depression accounts for more bed days—people not at work and in bed—than any other disorder except for cardiovascular disease. Studies show that as people age, the likelihood of depression increases.

Because the older population is expected to more than double in the next 50 years, inadequate management of the disorder among geriatric patients could become costly. "It is crucial that primary care physicians be able to recognize and effectively treat this condition, since only about 20 percent of patients with depression are treated by mental health professionals," Dr. Greenspan says.

Medical literature shows that primary care physicians, in general, are not particularly strong in detecting depression in older patients. One study noted by Dr. Greenspan estimated that general practitioners and family physicians failed to recognize depression in up to 50 percent of cases.⁵ Another study showed that 60 percent of depressed older adults do not receive appropriate care. "Yet, some geriatricians are excellent at detecting and treating depression in the elderly. It is more a matter of being attentive, looking for the diagnosis, and keeping familiar with at least one reliable approach to treatment," he says.

Diagnosing depression

Recognizing depression in geriatric patients can be difficult for even trained mental health professionals, because many signs and symptoms can appear as the result of a variety of physical illnesses. For many older adults, somatic symptoms

Ms. Hoepfer is a marketing associate for the Society's Educational and Scientific Trust. This article is one of a series, begun in January 1993 and ongoing through 1995, sponsored by Keystones of Public Health, the Trust's endeavor to address public health needs.

can represent depression, physical illness, or a combination of both. For example:

- Several common medical conditions—dementia, hyper or hypothyroidism, or medication side effects—can lead to the physical appearance of depression, even when depression is not present.
- Nonspecific physical symptoms such as insomnia, fatigue, weakness, anorexia, and diffuse pain may represent a variety of treatable medical illnesses, as well as depression.
- Specific physical symptoms—constipation, nausea, headache, palpitations and chest pain, joint pain—relating to every major organ system, can represent depression rather than physical illness in the elderly.

• Depression can exacerbate symptoms of existing physical illnesses.

“Frequently, depression and physical illness coexist in the geriatric patient. It is not surprising that treatable depression is often overlooked in older patients with physical illness, and that treatable physical illnesses are often not managed optimally in elderly diagnosed as having depression,” Dr. Greenspan explains. “If a patient meets the criteria for depression, regardless of whether some or all of the symptoms could be ascribed to physical illness, the patient is likely to improve with treatment for depression.”

He says the American Psychiatric Association’s *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV) is quite clear about how to make the diagnosis for major depressive episode (see “Diagnosing Depression,” next page). However, he adds, the burden of depressive illness in late life is not limited to major depression. Studies indicate that eight to 15 percent of older adults suffer from subsyndromal depression, commonly called minor depression.⁷

“This refers to patients who do not meet the full criteria for major depressive episode—maybe they only have three or four of the symptoms of depression listed in the DSM rather than the required five,” Dr. Greenspan explains. “Yet, these patients seem to be debilitated by these symptoms and are suffering. They, too, deserve treatment for depression.”

Dr. Greenspan says primary care physicians could detect a significant number of cases by simply asking one question: Have you been depressed lately? He adds there are several screening tools available to assist physicians in making a diagnosis. The Geriatric Depression Scale is commonly used to screen for the disorder.⁸ “This is fairly good because it is a self-report scale. You hand the questionnaire to the patient,

and he or she fills it out while sitting in the waiting room,” he says. “But there is nothing like talking to the patient, asking about depression, and being sensitive to the kinds of things that might represent depression but are disguised as physical symptoms. Insomnia, constipation, and weight loss are very common symptoms in the elderly that should alert a physician to think about depression.”

Diagnosing depression is further complicated by drugs taken by older patients. Dr. Greenspan says many times drugs prescribed to treat medical conditions can cause symptoms of depression in geriatric patients. These include antihypertensives, steroids, beta blockers, digitalis, and sedative—hypnotics or anti-anxiety agents, and alcohol. “Recently, I successfully treated a patient for depression by stopping her calcium channel blocker prescribed for high blood pressure. She had been depressed on and off for three years as a result of the drug,” Dr. Greenspan says. “That’s why it’s imperative that physicians take a comprehensive drug history when evaluating older patients.”

Depression versus dementia

When evaluating an older patient presenting with depression, it is often difficult for physicians to make the distinction between depression and senile dementia, according to Dr. Greenspan. Symptoms of both disorders may overlap. Dementia is often characterized by a lack of spontaneous interaction, apathy, loss of memory, and other cognitive disturbances. These symptoms can also occur in depression. This is further complicated because as many as 20 percent of patients with early stage Alzheimer’s disease also suffer from moderate to severe depression.⁹

“If in doubt about whether a patient is depressed or has early dementia, I would recommend that a physician treat the patient for depression or get a consultation. The major reason is depression is treatable. It’s a relatively safe way to proceed,” he advises, “as long as the physician carefully chooses the treatment and monitors the patient’s progress.”

Managing the depressed older patient

Several treatment modalities are available to manage depression in geriatric patients, according to Dr. Greenspan. The choice of treatment should depend on several factors, including the primary disorder causing the depression, the severity of symptoms, the availability and practicality of the various treatments, and underlying conditions that may contraindicate a

“When evaluating an older patient presenting with depression, it is often difficult for physicians to make the distinction between depression and senile dementia.”

→

Diagnosing Depression

A depressive episode, according to the American Psychiatric Association, is indicated by five or more of the following symptoms, present nearly every day during the same two-week period, and representing a change from previous functioning:

- √ depressed mood most of the day*
- √ markedly diminished interest or pleasure in all, or almost all, activities*
- √ significant weight loss when not dieting, or weight gain, or decrease or increase in appetite
- √ insomnia or hypersomnia
- √ psychomotor agitation or retardation
- √ fatigue or loss of energy
- √ feelings of worthlessness or excessive or inappropriate guilt
- √ diminished ability to think or concentrate, or indecisiveness
- √ recurrent thoughts of death, recurrent suicidal ideation without a specific plan, or a suicide attempt or a specific plan for committing suicide.

The American Psychiatric Association advises that physicians not include symptoms that are clearly due to a general medical condition, or mood-incongruent delusions or hallucinations.

This list has been edited from the American Psychiatric Association's *Diagnostic and Statistical Manual of Mental Disorders*. To accurately diagnose depression, physicians should refer to page 327 of the manual.

* At least one of these symptoms must be present.

specific treatment, e.g., a patient who has severe hearing loss may make psychotherapy difficult, or certain antidepressant drugs cannot be prescribed for patients with severe cardiovascular disease. Dr. Greenspan says there are primarily three therapeutic approaches used to manage depression:

1) *Pharmacologic Therapy*: Several types of drugs have been effective in treating depression in geriatric patients, including tricyclic antidepressants, monoamine oxidase inhibitors (MAOIs), selective serotonin reuptake inhibitors (SSRIs), and some "atypical" agents. Dr. Greenspan advises primary care physicians who choose drug treatment to begin using a low dose, and then slowly increase the dose. For many of these agents, maximum treatment doses are similar to that used for younger patients. He also emphasizes that physicians need to be patient and give the drug therapy time to work. Often treatments take six to eight weeks to show positive results.

2) *Psychotherapy*: Primary care physicians can play an integral role in informally providing the depressed geriatric patient with psychotherapy. Dr. Greenspan says that once the diagnosis of depression is made, many older patients fear that their physician will no longer care for them. Primary care physicians need to emphasize that they will be involved in the treatment, assure the patient that depression is treatable, and offer encouragement. Studies have shown that formal psychotherapy has significantly helped geriatric patients suffering from depression.¹⁰ Combining psychotherapy with drug therapy to facilitate a patient's recovery and aid in reintegrating them into their daily lives is often more effective than either modality alone.

3) *Electroconvulsive Therapy (ECT)*: This therapy should also be considered if drug treatment is poorly tolerated or if the patient is severely ill, has psychotic symptoms, or desires rapid relief from depression. According to Dr. Greenspan, ECT is safe and highly effective, and frequently faster and more reliable than medications. "ECT's only side effect, amnesia, wears off after treatments end. There is no permanent injury," he explains.

Importance of patient communications

As part of its study for the Department of Aging, the Society's Educational and Scientific Trust conducted several focus group discussions with older adults. The majority of participants said they are responsible for coping with their own de-

pression and do not feel physicians listen to them. "I think [physicians] could help you more if they knew exactly what was troubling you," commented one participant. "But they don't ask you. They don't give you the time."¹¹

Dr. Greenspan emphasizes that good doctor-patient communication is vital to the effective diagnosis and treatment of depression in older adults. "There is a stigma that goes along with mental illness and psychiatrists among this older population," he says. "The patient is often reluctant to volunteer information about depression, so it's up to the physician to draw this information out."

From diagnosis through the development of a treatment plan, primary care physicians should set aside a few minutes to educate patients and family members about depression. Dr. Greenspan recommends that physicians discuss depression with patients using the same approach they would for any other medical problem.

"Talk about depression as a medical illness. Discuss the signs and symptoms and likely course of the disease. Explain the diagnostic tests you used. Lay out the treatment regimen you have chosen. And, if you are going to refer the patient, talk about the psychiatrist in the same way you would about other medical specialists. Be very clear and matter of fact," he says. "Unfortunately, many practitioners take on this new approach, a new way of talking when they discuss emotional disorders with patients. For example, some physicians may take a more parental approach, while for others the conversational tone can become terse. Both approaches may make the patient reluctant to pursue the matter."

Dr. Greenspan believes both physicians and the public need to be better educated about depression in the elderly. Health professionals, older adults, and family members often fall prey to such misconceptions as: Depression is an inherent part of growing old, older people are too inflexible to benefit from psychological treatment, and depression is strictly a mental illness.

"We need more public education programs to emphasize that major depression is not just an emotional problem, but also a medical disorder that is treatable. Physicians and other health care professionals also need to be better informed about how to recognize depression and treat it. By more effectively dealing with this treatable source of excess disability and suffering, we could significantly improve the quality of life for many older adults." ◊

LYME DISEASE: DEBILITATING, YET PREVENTABLE

With the active tick season well upon us, it is once again time to give the public the facts on how to protect themselves from Lyme disease, a debilitating, yet easily preventable disease.

Pennsylvania is part of one of the hottest spots for Lyme disease in the United States. In fact, the rate of Lyme disease infection is second only to AIDS in the United States. Lyme disease is a complex multi-system disorder caused by bacteria transmitted by the bite of certain tick species. The ixodes scapularis, or the black-legged tick, is often mistakenly called the deer tick and is found on virtually all mammals, but especially mice, birds, squirrels, rabbits, cats, and dogs.

The great imitator

Lyme disease is very difficult to diagnose and has come to be known as "the great imitator" because it mimics many other diseases.

The symptoms can be similar to ALS (Lou Gehrig's disease), rheumatoid arthritis, Parkinson's disease, Guillain-Barre syndrome, polymyalgia rheumatica, cardiac disease, Menier's syndrome, Alzheimer's disease, sinusitis, and multiple sclerosis.

One of the tell-tale signs of the infection is a "bull's eye" rash. However, only about 50 percent of people bitten by a tick will develop the EM (erythema migrans) rash, which can appear anywhere on the body, not necessarily at the bite site.

The rash may appear three to 30 days after a tick bite, and be itchy and warm to the touch, expanding over several days as it fades away. A rash on darker skinned people may appear as a bruise.

Symptoms of Lyme disease infection may occur within a few days to a couple of weeks, but may lie dormant for months, even years, and not affect a patient until another illness occurs. Early symptoms can be flu-like—fatigue, headaches, low-grade fevers, swollen glands, pain or swelling in one or more joints—and also include memory loss, numbness, depression, and even Bell's palsy.

Late Lyme disease sufferers may develop arthritic, neurologic, or cardiac manifestations. It is essential that the treating physician be experienced in Lyme disease diagnosis and treatment.

Prevention is best defense

A lack of education among the general public and the medical community has generated several misconceptions about the cause and prevention of Lyme disease. One commonly held myth is that ticks are only a problem in spring and early summer. Ticks are active anytime the temperature is above freezing, with the most active period from April through October.

By following these simple steps, you and your patients can outsmart the tick:

Be aware that the tick lives in tall grass, bushes, and woods. Avoid these areas.

Wear light-colored clothing so you can see if a tick gets on you.

Wear long pants tucked inside your socks when walking through grass or the woods. Try to cover your skin as much as possible with a hat, tucked-in shirt with snug collar and cuffs, and good shoes.

Spray your clothes or any exposed skin with insect repellent that contains DEET. Remember to read and follow all label directions.

Check yourself and your children immediately after coming inside.

Disrobe on a large light-colored towel or sheet, roll up the sheet and clothes, place them in the dryer, and set the dryer on high heat for five minutes. The heat will kill the ticks. Shower at once. If there are any ticks crawling on you, they should wash off.

Finally, and most importantly, do a complete body check from head to toe. Run your hands all over your body. Pay attention to the back of the knees, the groin, armpits, and neck, since these are prime areas of tick attachment. Ticks are so small, you may not see them, but you will feel them. A tick may feel like a grain of sand or a small pimple. If attached, it may feel like a piece of skin or a scab that is about to come off.

Remove any attached ticks using fine-point tweezers, grasping the tick's head as close to your skin as possible. Never use a match, heat, or chemicals on the tick because it may cause it to expel fluid into you, increasing the risk of transmitting the disease. Proper removal is the key to lessening the risk of infection. The tick's barbed mouth parts may make it difficult to remove, so be patient but persistent. Once the tick has been removed you may want to treat the area with an antiseptic.

If the tick is so imbedded it is difficult to grasp with tweezers or uncomfortable to follow this procedure, see your doctor at once. The sooner a tick is properly removed the less likely you are to become infected.

Save the tick in an empty, covered jar labeled with the date and the bite's location. Be alert for early symptoms, and watch the bite area for signs of a rash for the next month or so.

Treating a Tick Bite

Lyme disease is not only one of the fastest growing infectious diseases, but also one of the most misunderstood and misdiagnosed. This situation has presented many controversies among physicians and many frustrations among patients.

One area of controversy is how soon to start treatment. Some physicians have argued against routine anti-microbial prophylaxes based upon the belief that the Lyme bacterium is unlikely before 24-48 hours of tick attachment. However, new research has found *Borrelia burgdorferi* present as soon as six hours after tick attachment.

With this in mind, the recommendation against treatment of short-duration tick bites may need reconsideration, particularly in hyper-endemic areas. A delay in diagnosis can be extremely detrimental, mainly because the longer the disease goes undetected, the harder it is to treat and put in remission. Testing is helpful but inconclusive at this point.

Most doctors admit that Lyme disease is a clinical diagnosis—one that the doctor must make based on his or her observations, and not based on the results of tests. Treatment varies from patient to patient. Oral antibiotics seem to do the job on most patients, with only a small percentage of Lyme disease patients eventually needing IV antibiotic therapy.

The author, Raymond Hernandez, is director of the Lyme Care Center, Whippany, New Jersey.

THE MEDICAL X-RAY: CELEBRATING 100 YEARS

On November 8, 1895, German physics professor Wilhelm Conrad Roentgen, working in his laboratory in Wurzburg, Germany, did something that defied belief. He saw the bones in his own hand. This year, the American College of Radiology, the Radiological Society of North America, and their respective chapters are celebrating the 100th anniversary of Roentgen's discovery of the x-ray.

Like many scientific breakthroughs, the discovery was purely by accident. Roentgen was experimenting with passing electrical charges through electrodes in sealed glass tubes, similar to today's light bulb, when he noticed a "glow." When he placed his hand between the light and a screen to create a shadow, he instead saw the bones and the outline of his hand.

Roentgen was not the first to produce x-rays, but he was the first to observe them. Many other scientists experimented with the Crookes tube, producing x-rays without knowing it. As early as 1890, Arthur W. Goodspeed of the University of Pennsylvania actually exposed photographic plates with x-rays.

There was no mistaking the importance of the unseen rays that could penetrate flesh. Roentgen—and the rest of a stunned world when he announced his discovery in January 1896—instantly grasped that the "mysterious Roentgen rays," as they were called, would transform medicine and science, although they could not have known how much.

X-rays led very quickly to the new field of radiology, which has gone on to propel much of medicine's progress in the last century by providing non-invasive, accurate, and increasingly sophisticated methods of diagnosis, and by offering new techniques to treat cancer and other maladies.

Early users of x-rays could not have imagined the entire field of radiology today—diagnosing imaging, radiation therapy, interventional procedures—and its impact on modern health care:

- finding cancer in its earliest forms and sometimes curing it;
- analyzing organ structures and functions in real time;
- making much exploratory surgery obsolete; "downsizing" surgical

Wilhelm Conrad Roentgen made this famous radiograph on December 22, 1895, six weeks after he observed—by accident—the first x-ray.

procedures; providing live, 3-D images that enable physicians to "practice" surgery in advance on a computer; and in some cases, replacing surgery;

- advancing knowledge of fetal and early childhood development;
- further understanding the origin and development of disease; and
- definitively diagnosing illnesses in their early stages.

"X-rays electrified the world," says Nancy Knight, PhD, historian and director of the Center for the American History of Radiology. "Until they were discovered...it never occurred to anyone that someday they might look through living flesh."

Look for more about the centennial anniversary of the x-ray later this fall in PENNSYLVANIA MEDICINE.

AMA TO HONOR MR. ROGERS AS LAYMAN OF THE YEAR

The American Medical Association this month will honor Pittsburgh's Fred Rogers, host of "Mister Rogers' Neighborhood," with its Citation of a Layman for Distinguished Service Award. The award recognizes "individuals not of the medical profession who help achieve the ideals of medicine by cooperation or aid in the advancement of medical science, medical education, or medical care."

Rogers was nominated for the award by the Allegheny County

Medical Society (ACMS), with endorsement by the State Society board. According to the nomination, "Thanks to Fred Rogers, every week over seven million kids learn about love, fear, sadness, jealousy, anger, friendship, trust, satisfaction—and get a good dose of self-esteem, which is the stated mission of the program. As a result, almost three generations have been a little better prepared for the challenges of growing up."

The longest-running children's program on public television, "Mister Rogers' Neighborhood" has been on the air for 25 years. Rogers is also founder and president of Family Communications, Inc., a nonprofit corporation which produces materials that encourage the healthy emotional growth of kids and their families.

ACMS's nomination concludes that Fred Rogers "has dedicated his professional life to *our* children and *their* children...His profound impact on so many Americans merits recognition by the AMA."

The award will be presented during the opening ceremonies of the AMA House of Delegates Annual Meeting in Chicago on June 18.

COUNTY NEWS

BERKS ALLIANCE HONORS DOCTORS' DAY

To honor Doctors' Day on March 30, the Berks County Medical Society Alliance, with the assistance of the Berks County Human Services Directory Collaborative, made the *Berks County Human Services Directory* available to the physician members of the county society.

The comprehensive directory includes basic background information on the broad range of services provided by nonprofit agencies and organizations in Berks County. The information was collected and processed over an 18-month period by the collaborative, which offers it free of charge to Berks County human services professionals.

The directory, available on an IBM-compatible, 3 1/2-inch computer disk and on hard copy, will be updated annually. For more information on this project, contact the Berks County Medical Society at (610) 929-8853.

76ERS COACH HEADLINES OSTEOPATHIC ASSEMBLY

John Lucas, head coach and general manager of the Philadelphia 76ers professional basketball team, presented the keynote address to physician members of the Pennsylvania Osteopathic Medical Association (POMA) at their annual clinical assembly in April.

In his address, entitled "The Addicted Athlete," Lucas told stories of the victories he achieved through his treatment programs for drug-addicted athletes. After his retirement as a professional basketball player in 1990, he founded the Houston-based John Lucas Enterprises, which runs a number of drug treatment programs and other endeavors to help addicted athletes maintain their sobriety and improve their quality of life.

John J. McPhilemy Jr., DO, team physician and orthopedic surgeon for the 76ers, and associate professor of orthopedic surgery, Philadelphia College of Osteopathic Medicine, also

spoke at the assembly about osteopathic management for back pain in athletes.

The program featured more than 40 speakers who spoke on such medical issues as cardiology, HIV/AIDS, women's health issues, infectious diseases, and pain management, as well as this year's theme, "Managing Health Care: Now and the Future."

CONFERENCE HIGHLIGHTS CIVIL WAR MEDICINE

The National Museum of Civil War Medicine will hold its annual Civil War Conference on August 4-6, 1995, at Hood College, Frederick, Maryland.

Sponsored by the museum to highlight the subject of civil war medicine and to raise funds for the project, this third annual conference will feature a bus tour of the Union 2nd Corps Hospital sites and a keynote address by former National Park Service Chief Historian Edwin Bearss.

The program will also include at least 15 speakers who will explore Civil War topics ranging from the giant Chimborazo Hospital complex in Richmond, to searching for Civil War medical ancestors, to the type and nature of gunshot wounds at Gettysburg, to how good or bad Civil War medicine really was.

The \$200 conference fee for non-museum members includes all lectures and meals. For more information and a brochure, call the museum at (301) 695-1864.

QUARTERLY REPORT OF HOUSE AVAILABLE

In accordance with Resolution 92-27 of the House of Delegates, the quarterly report on actions of the House is now available from the State Society. The report is provided to members to enable them to respond to and participate in upcoming House activities. To request a copy, call (800) 228-7823, extension 1403.

KePRO Chosen for HMO Pilot Project

Donald E. Harrop, MD

Early last fall, the Health Care Financing Administration (HCFA) announced that it was going to initiate a pilot project for peer review organizations (PROs) and health maintenance organizations (HMOs) which would incorporate a process similar to the Health Care Quality Improvement Program (HCQIP) for HMO review. That is, substituting data analysis and cooperative projects for individual HMO case review, with the exceptions of beneficiary complaints and death cases. PROs that were interested were asked to contact those HMOs in their states that qualified for the project, to see if they also were interested in volunteering to participate. KePRO, as well as three Pennsylvania HMOs which qualified, expressed willingness to be involved in the project.

Several criteria had to be met for a state to be eligible:

1) In addition to the PRO, there had to be a minimum of two HMOs willing to volunteer.

2) Each HMO had to have a minimum of 5,000 Medicare enrollees, so meaningful samples of cases could be selected.

3) The HMOs had to agree that they would participate with the PRO as partners.

4) All participants had to understand and agree that participation would be on a budget-neutral basis and that current

memoranda of agreement (MOA) would have to be amended.

5) Participating HMOs had to agree to involvement in joint cooperative health improvement projects, as well as individual projects where appropriate.

I am pleased to report that Pennsylvania was one of the five states chosen for this pilot, along with the three Pennsylvania HMOs. We view this as a great opportunity to help shape the way HCQIP will apply to the Medicare at-risk HMOs.

One reason we think this program holds promise for possibly even better cooperative projects than our basic HCQIP, which deals with inpatient or ambulatory surgical care only, is because HMO cooperative projects may include HMO physician office data as well as hospital data. Having the addition of both pre- and post-hospital records should enhance the analysis process and our ability to follow the continuum of care as well as outcomes information.

The first project the pilot PROs and HMOs will be implementing will be aimed at diabetes mellitus. This will actually be a test of the clinical indicators previously developed by the Delmarva Foundation under a HCFA contract, and later refined by a clinical panel consisting of physicians and nurses who were asked to evaluate the indicators from the perspective of practicing physicians.

A second panel consisting of HMO and PRO representatives was also convened to look at the operational aspects of the project. The focus here will be to test the usefulness of the indicators, make them easier to use, and verify their potential to stimulate health care quality improvement.

We are glad to be involved and certainly agree with a statement made by HCFA that this pilot will afford an opportunity for the participants to work collaboratively toward a process that will provide useful information about new ways to monitor, evaluate, and improve the processes and outcomes of care. ☺

***"The first project
the pilot PROs
and HMOs will
be implementing

Daniel L. Wisely, DO, Daytona Beach, FL

Kirksville College of Osteopathic Medicine, Missouri, 1955; age 66, died February 27, 1995. A family practitioner, Dr. Wisely was a former professor and chairman of surgery, Philadelphia College of Osteopathic Medicine.

• Denotes membership in the Pennsylvania Medical Society at the time of death.

In a Managed Care World, Medical Education Needs a Friend

The pillars of medical education financing are in jeopardy. Tuitions are rising relentlessly, research dollars shrinking, and Medicare subsidies are threatened, while managed care profits skyrocket.

Who will assist today's medical students, many of whom will accumulate over \$100,000 of debt? A Trust planned gift in support of the Student Loan Fund can help today and in the future. Call Trust planned giving officer Bob Lamb at 1-800-228-7823 or clip this coupon.

Service That Stands Out

Regarding the Old Around Us: Experienced or Obsolete?

Prem Kumar, MD

Recently, I displayed for sale my “experienced” car, with all its achievements. It had run a total of 180,000 miles, and seen many towns, cities, and states. Frankly speaking, I didn’t want to let it go. But then the idea of change itself changed my mind.

I noticed that this new “change syndrome” has gripped everyone. Politicians use it all the time. Our hospital recently changed the computer system, although I don’t know what was wrong with the previous system. American citizens voted to change presidents, and the new president is trying to change the world order.

Coming back to my car, I got hardly any offers. Did this surprise me? You bet! I began to wonder if experience has any role to play in the value of life. I’ve heard a great deal about “old is gold” and the “good old days,” but what about my old, experienced car?

I am sure the “change syndrome” will lead us to the enlightened path of no return. As we become old and experienced, we will become obsolete, like my old car. With the advent of a new, improved health care delivery system, the managed care corporations—armed with quality assurance and utilization review—are conducting cleansing of our senior colleagues. They have eroded medical collegiality and turned everyone against each other in the name of quality assurance.

The managed care corporations hire young doctors; HMOs want young patients; corporate principles are applied and followed; and the bottom line becomes top priority. Old, experienced doctors are considered obstructionist, and young doctors are considered pliant.

In the same way, old patients who need the most health care are considered liabilities, and young patients are “resources.” Patients are considered “customers,” and a “draw area” is a new market.

Change does not surprise me because it is very necessary and a basic fabric of life. But can we pause for a moment and think about somehow using the experienced ones around us?

It is rather heartening to know that we have not yet begun managed car care. I won’t have to struggle with gatekeepers. My car would certainly need some specialty care. With my limited knowledge, I think it needs an engine tune-up, oil and lube, brakes, new tires, and of course, a new transmission—nothing out of the ordinary for such an old car. It will cost some money, but then it would be a happy old car, ready to run for a few thousand more miles. As I began to calculate the cost of these few extra thousand miles, I wondered who would pay for it all. If there were CMOs (car maintenance organizations), would that solve my problem?

I have heard a lot of horror stories about HMOs which routinely deny specialty care to seniors and the needy. So I think my car would certainly be denied the care it needs in such an arrangement.

An article, “Should doctors treat patients like we make cars?” in the October 10, 1994, issue of *AMNews*, fits into my thinking. Its author explains that as the new forces of managed care across the nation begin to apply industrial concepts in delivery of health care, the practice of medicine is becoming an assembly line, with numerous specialists, subspecialists, and sub-specialists, each doing their little thing like skilled technicians. And the primary care physician’s role has been changed to that of gatekeeper, like a traffic policeman. The sudden mushrooming of “centers of excellence”—heart centers, kidney centers, MRI centers, and 1-800-CALL-HERNIA—all speak for treating patients like cars.

As I look around, there are plenty of old cars, just like there are plenty of older citizens. What do we do with it when we fix the old car? And, when do we junk it? Are we doing the same thing to our senior citizens, parents, and grandparents?

In the end, with much sorrow in my heart, I decided to junk my old car. My heart sunk as it was towed away. I followed it to the junkyard and watched as it was crushed and thrown amidst the other discarded cars. It lay there very silently, that which had once been a part of my life. ☐

Dr. Kumar, who specializes in internal medicine, cardiovascular diseases, and critical care medicine, is president of the Butler County Medical Society.

Research shows the average medical conference doesn't satisfy the needs of the primary care physician. We're not average.

If you can attend only one medical conference this year, make it the **Primary Care Conference & Exhibition (PCCE)**...the first and only national conference designed to satisfy the changing needs of primary care.

The PCCE was created in response to research conducted with you, the primary care physician (internist, FP, GP, pediatrician, or ob/gyn).^{*} An overwhelming 96% of physicians surveyed responded positively to plans for the PCCE, while 74% expressed a definite need for the PCCE.

The PCCE is the medical conference with the most to offer primary care physicians in 1995:

- Special Presentation by **C. EVERETT KOOP, MD, ScD**, on the 'Essential Role of the Primary Care Physician in Health Care Today'
- Guest Lecture by **PAUL C. BRUCKER, MD**, President of Thomas Jefferson University, Philadelphia, PA
- Keynote lectures by **VIVIAN W. PINN, MD**, Associate Director of the National Institutes of Health for Research on Women's Health and former President of the National Medical Association; and **SAMUEL O. THIER, MD**, President of Massachusetts General Hospital and former President of the Institute of Medicine
- Plenary sessions and clinical workshops covering 'Common Clinical Problems in Ambulatory Care,' 'Practical Therapeutics,' 'Women's Health,' 'Geriatrics,' 'The Changes Facing Primary Care Practitioners,' and much more
- "Meet the Professor" breakfasts and luncheons—a unique opportunity to discuss issues with PCCE faculty in a small, informal setting
- Sponsored by Tufts University School of Medicine, a member of the CME PARTNERSHIP
- Approved for Category I CME credits
- Approved for 20.5 Prescribed Hours by the AAFP
- An Exhibition of the best health care products available today
- Family Programs, Travel and Hotel Packages, etc.

The PCCE is sponsored by Tufts University School of Medicine...a member of the CME Partnership in collaboration with • Reed Exhibition Companies, The World's Largest Trade Show Organizer and • Reed Elsevier Medical Publishing, The World's Largest Medical Publishers, including Excerpta Medica, Elsevier Science, Cabners Healthcare, and Springhouse.

Call 1-800-363-3631 now to request your conference brochure and registration materials.

MIIX POWERFUL PARTNERSHIPS.

Stability, strength
and synergy
stand the test of time.

Almost twenty years ago,
such a foundation was laid
by medical professionals
to build protection through your own
medical liability insurance company.

With your support, we have grown
to become the insurance carrier
of choice for physicians and surgeons,
as well as their hospitals,
throughout New Jersey and Pennsylvania.

Today, change is everywhere, and stability,
strength and synergy have never been so valuable.

But they are not enough.
To succeed today, you need the added power
of new insurance products, financial services,
and consulting services.

MIIX has broadened its foundation and
introduced these membership enhancements
to help you meet the challenge of change.

Call us for more details: 1-800-234-MIIX.

We develop powerful partnerships.

MEDICAL INTER-INSURANCE EXCHANGE

305 NORTH FRONT STREET, SUITE 405, HARRISBURG, PA 17101

What is a CULT

Are you concerned about the involvement of a family member, a friend, an associate—or yourself—in an unfamiliar group?

This brochure is designed to help you understand what you may be dealing with and to help you find assistance.

For the purposes of this brochure, a cult is defined as “a group that violates the rights of its members, harms them through abusive techniques of mind control, and distinguishes itself from a normal social or religious group by subjecting its members to physical, mental, or financial deprivation or deception to keep them in the group.” When so defined in a 1992 survey conducted by the Pennsylvania Medical Society, 20 percent of responding physicians reported personal or professional exposure to those victimized, and two percent reported experience in their own families.

A somewhat different definition was formulated by participants at the Wellspring Cultic Studies Conference of 1986. There, cults were characterized as: “groups or movements exhibiting excessive devotion or dedication to some person, idea, or thing, and employing unethically manipulative techniques of persuasion and control designed to advance the goals of the group’s leader(s), to the actual or possible detriment of members, their families, and the community.”

Although the term “cult” carries many negative connotations, groups that we might simply dislike are not always cults. For example,

the Internal Revenue Service is not a cult, nor are unabashedly authoritarian groups like the U.S. Marines or many historic movements that have been classified “cults” based on dated definitions such as “a departure from the mainstream.”

Cults are usually characterized by a certain type of leader, a certain type of relationship between leader(s) and follower(s), and the use of extreme techniques of influence and control. Cult leaders are generally self appointed, persuasive, determined, and domineering, and claim special knowledge or a special mission in life, and center veneration on themselves.

Cults also:

- claim innovation, are exclusive and authoritarian, and have a double set of ethics for subjects and their leaders;
- demand total compliance, requiring subjects to undergo absolute disruption of their lifestyle;
- use extreme influence and control techniques such as brainwashing, coercive persuasion, or mind control; and
- are zealous and frequently very extreme in their world view.

As a result, cults often come into conflict with and are threatened by rational, open, de-

mocratic, and benevolent systems such as subjects' families, healthier organizations, and society at large.

While the majority of those assimilated by a cult are normal and healthy at induction, one study indicates that 95 percent of the victims seeking help after leaving such groups qualify for psychiatric diagnoses.

Not all cults are alike

Although cults have much in common, they are not all alike, and some may not exhibit the above "signs" consistently. Cults change over time, varying in their fanaticism as well as in their notoriety. All persons are advised to evaluate suspicious groups by their effects on subjects, their families, and society. If you believe you have discovered a new group, it would be helpful to give as much detailed information as possible to one or more of the resource organizations listed on the next page.

Most cults can be characterized by the proclaimed belief system or objectives that focus the attention of subjects and nonsubjects alike. For example, there are neo-Christian religious cults; Hindu and eastern religious cults; occult, witchcraft, and Satanistic cults; mystical cults; Zen and other Sino-Japanese philosophical-mystical cults; racial cults; flying saucer and outer-space cults; psychological or psychotherapeutic cults; political cults; and self-help, self-improvement, and lifestyle systems cults. Many cults fall into multiple categories. Although these differences may seem quite dramatic, cults resemble one another much more when their behaviors and the resultant damage are examined.

Deception is a defining element which emanates from the core of mind-manipulating groups. Many subjects and even ex-subjects of such groups are not fully aware of the extent to which they have been abused and exploited.

One common cult tactic is to get a recruit to agree that the state of the world or the state of their own personal condition is undesirable, tell them what they need to do to make themselves or the world better, get themselves working on the solution, and keep them there.

The peculiar workaholicism of the cult keeps the victim always investing in the future and never enjoying the present. The victim's mind is always kept on something else, which gives the victim the appearance of being distracted.

The cult leader(s) particular form of moral imbecility includes their dogged belief that they and they alone have the solution(s), and their moral insanity includes a lack of insight and a strong tendency to deny that there could be anything wrong with themselves or their organization(s).

Cults redirect the victim to remaking himself or herself, or to remaking the world, while actually molding him and/or her to satisfy the grandiosity or financial aspirations of the leader(s).

Sound familiar?

The statements in the next section often characterize such groups, although no one statement is sufficient to warrant labeling a group a cult. The statements are offered to help you compare the group with which you are concerned with actual cults. If you check more than one, it is advisable to begin asking additional questions about the group.

- ☐ The group is focused on a leader to whom the subjects display extremely zealous and unquestioning commitment.
- ☐ The group discourages or even punishes question, doubt, or dissent.
- ☐ The group is preoccupied with bringing in new subjects.
- ☐ The group is preoccupied with making money.
- ☐ The group employs mind-numbing techniques such as trance induction, prolonged chanting, detailed interrogations, long lectures, long sermons, or exhausting work routines in order to suppress doubts and enforce compliance.
- ☐ The group is elitist and claims a special exalted status for itself, its leader(s), and its subjects. (For example, the leader is the Messiah, and he or she and the group have a special mission to save humanity or the world.)
- ☐ The group has a strongly polarized totalitarian "we-they" mentality which causes conflict with the wider society.
- ☐ The group teaches or implies that its supposedly exalted ends justify the means it employs—means that subjects would have considered unethical before being recruited.
- ☐ The group's leader(s) is/are not accountable to any authorities in contrast to military commanders or mainstream ministers, priests, and rabbis.
- ☐ The group's leadership dictates how subjects should think, act, and even feel, requiring subjects to get permission to date, change jobs, get married, have children, or move.

- ☐ Subjects' subservience to the group causes them to cut ties with family, friends, and personal pre-group goals and interests.
- ☐ Subjects are encouraged or required to live with and socialize with only other group subjects.

Especially dangerous behaviors

A group may be especially dangerous if it camouflages itself as encouraging Bible study, self-improvement, political action, or business skills, but does some or all of the following:

- uses intense mind-control techniques or propaganda to influence cult subjects, or the socially disaffected or psychopaths to commit criminal acts;
- conceals criminal acts or the criminal backgrounds of leaders;
- approves of destroying enemies;
- uses sexual abuse as a means of control;
- uses physical or mental punishment for subjects who stray;
- sexually seduces subjects for their "spiritual advancement;"
- regresses subjects to child-like dependency and total obedience;
- prostitutes young people to recruit new subjects or manipulate political figures;
- insists that they and they alone are right and have all the answers;
- inculcates the belief or fear or phobia that to leave the group or disobey the leader would cause self-destruction, insanity, disease, suicide, death, or eternal damnation for themselves and/or their loved ones and/or their families;
- levels bizarre accusations against parents or other significant figures in order to alienate victims from family and other significant support systems;
- indoctrinates subjects with phobias about outside sources of help ("Deprogrammers will kidnap you." "Your family will commit you.");
- discourages or disallows medical attention even though there may be a life-threatening problem;
- detains or actually kidnaps subjects to keep them in the group;
- maintains guarded premises to keep people away and armed camps for stockpiling weapons;
- starves and exposes subjects whose resources are depleted;
- drives subjects to madness and/or suicide;
- murders dissenters or perceived enemies; and/or
- incites or commits mass murder or mayhem.

Helpful measures

Be wary of spending your money for treatments, seminars, or counseling for either yourself or a family member until you have thoroughly verified the credentials and qualifications of the program. Be on the alert for false-front operations.

- Be wary of sending money to a person in a group that is unknown to you. Gifts that cannot be pawned or a non-refundable, one-way airline ticket are less likely to be turned over to the cult.
- Keep careful records of names, addresses, and phone numbers of persons known to be associated with a suspected cult.
- Maintain a written chronology of events associated with the individual's activities related to the group.
- Go to your local library and ask for information about the group or about cults in general.
- Collect information about the group from newspaper and magazine articles, books, and even publications of the group itself.
- Do not attack the group belief system. This can be particularly counterproductive in discussions with a new recruit currently enamored with the group's propaganda, which can include high-sounding philosophy, claims, and aims.
 - Don't blame the victim!
 - Do mobilize your resources!
 - Do call any of the following resource organizations!
 - Don't give up!!!

*Respond to all
communications from the
victim in an appropriately
firm, loving, sincere,
respectful, non-judgmental,
and consistent manner.*

*Report all cult-related sickness
and death to:
Cult Morbidity and Mortality Registry,
PO Box 1164, Kingston, PA 18704
Phone: (717) 287-5002
Fax: (717) 288-9725*

Resource organizations

The following are resource organizations for the United States and Canada:

American Family Foundation

P.O. Box 2265
Bonita Springs, FL 33959
(212) 533-5420

Cult Awareness Network

2421 West Pratt Boulevard, Suite 1173
Chicago, IL 60645
(312) 267-7777

Info-Cult

5655 Avenue Du Parc, Bureau 305
Montreal, Quebec H2V 4H2
Canada
(514) 274-2333

Those seeking information in this area should note:

In addition to the above, there are many allied organizations in the United States, local affiliates of the Cult Awareness Network, and either general or cult-specific recovery and support groups. Most major nations have similar organizations.

Recommended reading

These recently published books may help you understand contemporary cult problems. Information about specific cults is frequently available in the bibliographies of the listed books, and by name at some libraries and bookstores. Further books, references, and other materials can be obtained from the reference organizations, some of which offer specific research assistance.

Recommended reading includes:

Captive Hearts, Captive Minds, Madeleine Tobias and Janja Lalich, Hunter House, Alameda, CA, 1994.

Combating Cult Mind Control, Steven Hassan, Park Street Press, Rochester, VT, 1988.

Cult Proofing Your Kids, Paul Martin, Zondervan, Grand Rapids, MI, 1993.

Cults in Our Midst, Margaret Singer, Jossey Bass, San Francisco, CA, 1995.

Cults on Campus, Marcia Rudin, American Family Foundation, Bonita Springs, FL, 1991.

Cults: What Parents Should Know, Joan Ross and Michael Langone, Carol Publishing Group, New York, NY, 1988.

Exit Counseling: A Family Intervention, Carol Giambalvo, American Family Foundation, Bonita Springs, FL, 1992.

Recovery From Cults, Michael Langone, W.W. Norton, New York, NY, 1993.

"Depending on how we define a cult, there are anywhere from 3,000 to 5,000 cults in the United States alone, accounting for perhaps hundreds of thousands of current 'subjects' and millions of former subjects. This trend portends a major public health problem whose dimensions have yet to be fully discerned." —Edward A. Lottick, MD

22 *Cult-Proofing Your Patients: A Guide to Diagnosis, Treatment, and Referral of Cult Victims and Survivors*

"Physicians are uniquely positioned to help those endangered and impaired by destructive groups that are harmful to health and well-being," says Edward A. Lottick, MD. This article and accompanying insert provide guidance and resources for physicians and patients to use to circumvent years of debility for victims of such groups.

PENNSYLVANIA MEDICINE (ISSN 0031-4595) is published monthly by the Pennsylvania Medical Society, 777 East Park Drive, Harrisburg, PA 17111.

SUBSCRIPTIONS: \$25 per year—United States and Canada; \$35—all others. Single issues \$3.50 per copy prepaid; special issues cost more.

POSTMASTER: Send address changes to PENNSYLVANIA MEDICINE, 777 East Park Drive, PO Box 8820, Harrisburg, PA 17105-8820. Second class postage paid at Harrisburg, PA 17105, and at additional mailing offices.

“This is unbelievable.

Thirty minutes into our first meeting, it was obvious who was running the show, and he wasn't a doctor. He had

an agenda that wasn't anything close to mine. Sure, when they sold me the medical liability policy, they bragged about having physicians on their board. They told me to expect a fair review by my peers if there was ever a problem. Then came the malpractice suit. I'm really afraid I might lose this one, and not because of a bad medical decision. I wish now that I had protected my reputation and signed with PMSLIC. PMSLIC is doctor owned, doctor run. With PMSLIC, any claims brought against me would have been reviewed by physicians like me — physicians with a vested interest in the reputation of the

medical community — a reputation we all need to maintain, even safeguard. That would have made all the difference in the world to me. Because now, I'm really scared.”

GENERAL ASSEMBLY PASSES INSURANCE FRAUD REPEAL: Pennsylvania's General Assembly on June 28 passed Society-supported House Bill 247, to repeal a section of the state Crimes Code relating to insurance fraud and the requirement for physicians to certify claims for reimbursement. Failure to repeal this section of the code would "virtually eliminate health care electronics claims processing and will unduly require physician certification of claims forms," according to State Society President John H. Hobart, MD. Also included in the bill are certain protections for caregivers with regard to treatment of patients with advance directives, and penalties for prostitution committed by persons who are knowingly HIV positive. At press time, the bill was awaiting the governor's signature.

STATE BUDGET HAS LITTLE IMPACT ON PHYSICIANS: While passage of the state budget does not greatly impact on Pennsylvania physicians, it does include several items of interest: 1) Funds were provided for diabetes services, including physician and patient education services and materials supported by the Pennsylvania Diabetes Academy, an affiliate of the Society's Educational and Scientific Trust. 2) Funding for the proposed Health Care Arbitration Panels was not included. The Society was successful in the past in defeating attempts to fund these panels through a special provider assessment. 3) The Health Facility Hearing Board, the appeals board within the Certificate of Need (CON) process, also was not funded. It is unclear at press time what that means to the future of the CON process.

TEN-DIGIT MEDICAID RECIPIENT NUMBER NOW REQUIRED ON INVOICES:

The May 26, 1995, *Medical Assistance Bulletin* reminds physicians: "Effective with invoices received on or after July 3, 1995, providers must submit invoices using only the 10-digit recipient number located on the recipient's ACCESS card. For Physician's or Medical Services/Supplies Invoices or Claims Adjustment forms MA-319, MA-319C, and MA-319A, complete Item 1, Recipient Number. Do not complete items 2 and 3." Direct any questions about the new procedure to the Society's Department of Medical Economics at (800) 228-7823 or (717) 558-7750.

ERIE PHYSICIAN, DANVILLE ATTORNEY ACCEPT NEW APPOINTMENTS:

The Senate in late June confirmed Sant Ram, MD, as a member of the State Board of Medicine. Dr. Ram, an Erie pediatrician and State Society member, will serve a term which will expire in December. Also, Governor Tom Ridge has appointed John H. Reed, JD, as director of the Medical Professional Liability Catastrophe Loss Fund (CAT Fund), effective July 3. As former litigation counsel for Geisinger Health System, Danville, Reed has direct job experience in dealing with professional liability issues.

PMSLIC RATED A- (EXCELLENT) BY A.M. BEST COMPANY: In recognition of its strong financial position and ability to meet its obligations to policyholders, the Pennsylvania Medical Society Liability Insurance Company (PMSLIC) has achieved an A- (Excellent) rating from A.M. Best Company, Inc. According to PMSLIC spokesperson Anna Lavertue, the A- rating is due, in part, to PMSLIC's leadership position in the professional liability insurance market for physicians and management's actions to favorably position the company to respond to future health care changes. Best's Ratings have been recognized as the industry's standard measure of insurer strength for nearly a century.

NOMINATIONS REQUESTED FOR TOBACCO-FREE PHARMACY PROGRAM:

The State Society is now accepting nominations for its 1995 Tobacco-Free Pharmacy Recognition Program. To nominate a pharmacy which does not sell tobacco products, submit the pharmacy name to Linda Harder, Division of Communications, Pennsylvania Medical Society, P.O. Box 8820, Harrisburg, PA 17105-8820; or fax nominees to (717) 558-7840. Deadline for nominations: September 1. Last year, the Society recognized more than 400 pharmacies statewide. For information about this year's program, call (800) 228-7823 or (717) 558-7750, extension 1443 or 1437.

Messages to Our Children

John W. Mills, MD

This month, we feature an article by State Society member Edward Lottick, MD, on the cult movement in our country. It offers guidelines to help increase awareness of such entities and to help physicians discuss them with patients as well as their own families. Dr. Lottick writes from personal experience, having lost a son as a result of cult involvement. He notes that bizarre behavior may be a sign of cult involvement, and changes from the "norm" for an individual may be even more symptomatic.

The birth of our newest granddaughter on May 26 (Alexandra Elizabeth—sounds like royalty to me!) focused my thoughts on Dr. Lottick's article. What kind of world is this youngest member of our family joining? What kind of messages are we sending to our children?

The recent Oklahoma tragedy brought us all up short with its bleak statistics and unexpected terrorism toward our government from our own citizens. The bombing occurred the morning after our arrival home from England, and was even more of a jolt since my only sister lives there and could have been in the Social Security office that morning for a number of reasons.

It wasn't long before a theoretical tie-in to the siege at Waco, Texas, was advanced by investigators. We have since been deluged with interviews, quotes, theories, and speculation concerning the perpetrators, their motivations, and especially their involvement in a private militia group.

The aspect of all this activity that drew my attention was the preponderance of state militias, with their seemingly paranoid attitude toward our federal government and its law enforcement agencies.

The militias of our early colonies were the backbone of the Continental Army, and subsequently, "state guards," as they were called, were controlled by the states. They were well trained and kept in readiness for any state emergency. The president of the United States could only call these units into federal service through the state governors.

During a recent visit to the Johnstown Flood Museum, I learned how General Hastings and the Pennsylvania Militia maintained law and order following the flood in 1889. They assisted with immediate flood relief efforts and with rebuilding the city. The Act of 1903 organized the National Guard out of the state militias, and the National Defense Acts of 1920 and 1933 extended federal authority.

However, present-day private militias are solely their own authority. They should take their mission of self-preservation in a serious vein, by advocating change in our federal government through our elected governmental system.

As we watched the news coverage of these groups in their peculiar isolation, who couldn't name a long list of real problems that might be a better purpose for any well-intentioned group?

Gambling statistics continue to escalate as riverboat casinos are approved by more states. The toll is not only individual lives, but also legitimate business as well. Money spent at the tables or at "one-armed bandits" shortchanges our expenditures for food, clothing, and other basic needs. The casinos have even targeted the family now with theme areas complete with child care, so Mom can gamble too!

A recent short feature in *USA Today* targeted poverty as the root of the world's health woes, according to the World Health Organization. It is easy to see that much more money is needed for education and prevention, as well as medical care.

And to quote a startling public health statistic: "Smoking kills three million adults a year worldwide, and if current trends continue, this figure is expected to reach 10 million by 2020."

Responsibility rests with our government, as well as with our citizens. Dr. Lottick's article, beginning on page 22, gently reminds us that we physician-citizens have a special responsibility—a special message for our children. We can recognize the harmful aberrations in human behavior and in our society, and attempt to right them. ☐

Reform's Big Picture Remains Puzzling to Patients

John H. Hobart, MD

Recently I had the pleasure to speak at the 50th reunion of the Haverford College Class of 1945—an institution where I myself was a member of a graduating class of another vintage. Nonetheless, I still approached the task with a good deal of trepidation. You may be surprised at the topic that was requested of me—health system reform.

For physicians, who lived through what seemed to be daily iterations of health system reform proposals not so long ago, this may come as something of a surprise. Perhaps we feel that we have been over this ground so many times that another tour would find little interest for a public audience.

Furthermore, many physicians, I think, have come to feel that the issue is not some all-encompassing scheme for “reform,” but rather the reality of many smaller changes in the various segments of our health care delivery system that, taken together, will transform the environment in which we care for our patients.

With this in mind, I told the folks at Haverford a bit about the history of health

system reform and how physicians spearheaded the public discussion as early as 1987. I pointed out that in 1988, nearly 73 percent of the private health insurance market was indemnity insurance, but just six years later, by 1993, only about 33 percent of private insurance worked that way.

We reviewed the growth of managed care, how it is affecting the practice of medicine, and the critical need for safeguards to protect patients from arbitrary, undisclosed policies and also for some rational antitrust relief for physicians. Finally, we touched on the issues of medical liability and tort reform.

As I was working on the speech, and even while presenting it, I was struck by the real challenge we continue to face in bringing our message to the public. Talking about health care is not like describing the Mona Lisa. It's more like describing a jigsaw puzzle of the Mona Lisa—one piece at a time.

For those of us who attend meetings and read publications where these issues are discussed on a regular basis, it's easy to see the big picture. It is, after all, our own profession we are talking about. But when we speak to the general public, we may sometimes forget that our audience has not seen, so to speak, the completed picture on the front of the puzzle box.

It is perhaps more important than ever to remember that we physicians are indeed advocates for our patients. When we speak of reform, we need to continually call attention to our concern for the rights of our patients—to their right to choose their own physician, to their right to protections under managed care, and to their rights regarding information and appeals processes.

Health system reform as a single, over-riding plan may be history. But the public's concern about what happens next is still a matter of ongoing interest and concern. ○

“It is perhaps more important than ever to remember that we physicians are indeed advocates for our patients.”

ACTIONS OF THE BOARD OF TRUSTEES, MAY 9-10, 1995

STRATEGIES ADDRESS MANAGED CARE CONCERNS

The board approved a series of recommendations to help physicians better deal with selective contracting, economic credentialing, and exclusive contracts by managed care entities and insurers.

Since the board's January meeting, the Ad Hoc Committee to Consider the Matter of Selective Contracting has been developing strategies to position the Society for quick action and policy advantage. First on the list of recommendations was endorsement of the AMA's Patient Protection Act, which requires HMOs to establish organized medical staffs to determine credentialing criteria.

The committee also recommended:

- adoption of policy that criteria for hospital clinical privileges be developed by the medical staff, that criteria should be different from the criteria for managed care organization participation, and that these criteria should not be tied together;
- reaffirmation of the Society's policy on exclusive contracts;
- adoption of policy that economic productivity should not be a factor in medical staff reappointment;
- pursuit of legislation to protect competition in physician hospital organization arrangements; and
- development of a document to assist physicians who are determining whether to sign an exclusive contract with a managed care organization.

POLICY APPROVED ON PRACTICE PARAMETERS

To help guide future policy, as well as provide guidance for hospitals and their medical staffs in the development of practice parameters, the Society has approved a policy statement on practice parameters which has been forwarded to the Hospital Association of Pennsylvania for its review and possible adoption.

The statement will align the Society with AMA position on use of practice parameters in a hospital setting, with limited exceptions.

The Council on Medical Economics also provided an advocacy/position paper on global

capitation for board approval. The 40-page, copyrighted paper—which includes an overview of issues, plus charts and graphs on basic integration models, and a comparison of managed care products, incentives, and various risk arrangements—is available to members by request.

Relating to Employee Retirement Income Security Act (ERISA) provisions, the board approved as Society policy three AMA policies which address the impact the pre-emption provisions have on state health system reform efforts. These policies support modification of ERISA pre-emption to accommodate state health system reform.

COUNCIL REVIEWS USE OF NURSE PRACTITIONERS

The debate in Pennsylvania currently focuses on how to grant limited prescription-writing abilities to nurse practitioners.

The Council on Education and Science provided an informative report on the controversies surrounding use of nurse practitioners in Pennsylvania. The report notes that the Society supports the extension of limited prescribing ability to nurse practitioners, providing that it is handled in a manner similar to the way prescribing by physician assistants is handled.

The board sent a resolution through the AMA delegation requesting AMA study of the quality of care of unsupervised nurse practitioners.

AMA LITIGATION CENTER TO AID SOCIETY EFFORTS

The board in May approved the Society's participation in the AMA/State Medical Society Litigation Center.

Changes in health care delivery systems and the movement toward larger health care alliances and integrated delivery systems have brought organized medicine into increasing numbers of battles in the courts. The Litigation Center was established by the AMA to aid state medical society efforts in addressing

the priorities of managed care and third-party reimbursement problems.

An annual contribution by participating state societies will be used to create a partnership between the states. The AMA will staff the center, with the resources of its Office of General Counsel available as needed.

HMSS CHANGES NAME TO OMSS

The Society's Hospital Medical Staff Section will become the Organized Medical Staff Section this fall, with the House of Delegates' approval.

The name change is designed to expand representation to include organized medical staffs of other health facilities and emerging delivery systems, such as physician-hospital organizations, managed care organizations, independent practice associations, physician organizations, staff model health maintenance organizations, and preferred provider organizations.

The section's Governing Council believes the HMSS can assist physician organizations in addressing medical staff issues that confront them and can provide them with a mechanism to have their concerns addressed by organized medicine at the state and national levels.

AGROMEDICINE PROGRAM ENDORSED BY SOCIETY

An innovative program developed by Penn State's Milton S. Hershey Medical Center and the Pennsylvania Department of Agriculture (PDA) has attracted the attention and endorsement of the Society's Council on Education and Science and the board.

The proposal is designed to implement medical and medically related components of the U.S. EPA standard in Pennsylvania, which requires the education of farm workers to enable them to identify and deal with hazardous pesticides in the workplace and be prepared to respond to pesticide poisoning. The program will also involve health care workers.

SPECIALTY THANKS SOCIETY FOR DUAL ELIGIBILITY WIN

The Council of the Pennsylvania Psychiatric Society joins me in expressing our great appreciation for the Pennsylvania Medical Society's successful effort to procure Medical Assistance coverage of Medicare deductibles and coinsurance for the "dually eligible."

We routinely publish information about Medical Society activities in our newsletter, and we conduct a yearly campaign to recruit our members into the Society. We generally cite the many intangible benefits of membership and the valuable informational resources you offer to our own organization. Successes like this one, however, offer persuasive, tangible evidence of the important role which the Medical Society plays on behalf of all physicians.

Please convey our thanks to the Medical Society board and staff.

*Michael J. Vergare, MD
Immediate Past President
Pennsylvania Psychiatric Society*

ON REACHING THE MORAL HIGH GROUND

The following letters were sent to Dr. Joseph S. Silverman, author of "A New Approach to Health System Reform: Seizing the Moral High Ground" (June 1995) in response to his request for review of the article prior to publication.

I recently attended a meeting where the speaker showed a slide asking the question, "Where will the patients go when all the doctors are businessmen?" It was a quote, but I can't remember who said it. The speaker then set up an interesting hypothesis for the world of managed care. Suppose the cardiologist in a particular HMO developed a procedure that replaced coronary bypass surgery. The procedure was minimally invasive, performed on an outpatient basis, and could be done for thousands of dollars less than the surgical procedure.

Would that HMO then require patients to join their plan in order to have the procedure? Would that HMO sell the procedure to selected plans in other parts of the country and the world? How would that HMO use the money it earned from that procedure?

Would they spend it on research? Would they pay the doctors more? Would they set up a corporation and sell stock? Would patients other than their patients be given any consideration? I think your paper addresses the answer to these questions. If medicine is to be an honorable profession, all these questions are unrealistic questions.

Your proposal of a commission is an interesting one. Hopefully such a commission would make such good proposals that all men of good will could embrace them. I don't feel the AMA House of Delegates should have a veto anymore than any state legislature or any insurance company.

It is a little frightening how much of a business medicine has become. Hopefully the pendulum will start to come back in the direction of professionalism.

*A. Leonard Zimmerman, MD
Altoona*

Needless to say, I agree with your general sentiments. However, I doubt that your call for "a high level commission of experts...to propose changes in the delivery of health care" is practical. You are right in recognizing that we have to reform the delivery system as well as the financing and insurance system, but I seriously doubt that any such group as you propose would be able to do the job in the near future. The economic and political problems would be overwhelming.

Our health care system is now being shaped by a competitive and commercialized marketplace. I don't anticipate any real reform until Americans realize that the marketplace is not the answer.

*Arnold S. Relman, MD
Professor Emeritus of Medicine
and of Social Medicine
Harvard Medical School, Boston, MA*

GIVE US THE FAX:

Quality of care under managed care—many of the debates surrounding health care reform boil down to this issue. Has "managed care" directly affected how you practice medicine? For the better or for the worse? Write to us about your thoughts and experiences.

Nobody
ever taught me
about using inhalants.
They never taught me that sniffing
stuff like airplane glue or fingernail
polish remover or correction fluid could make my
grades suffer. Or I'd become so moody and irritable, I'd end up
fighting with my friends and family. They never taught me I'd have
chemical breath and sores would grow all around my mouth. They never taught me
it could ruin almost every vital organ in my body and cause permanent damage to
my brain. They never taught me it could kill me the very first time I tried it.
But since nobody ever taught me this, I guess I'll just have to learn it on my own.

Membership is Everyone's Concern

Young Physicians are the **FUTURE**
of the Pennsylvania Medical Society

We Need Your Help

Recruit a Young Physician Today

Here's How:

- Inform the young physician that the State Society is working to insure that young physicians can survive in the changing marketplace.
- Tell them about services provided by PennMed Member Services Company (PMSCO) for physicians, setting up networks, developing group mergers, etc.
- Inform them about medical liability insurance through the Pennsylvania Medical Society Liability Insurance Company (PMSLIC).
- Make sure they know that their State Society is offering discounted dues for young physicians in the first five years of practice (20, 40, 60, 80, 100%).

Ask the young physician to complete this request for application and return it to:

Pennsylvania Medical Society
P.O. Box 8820
Harrisburg, PA 17105-8820
(800) 228-7823 FAX (717) 558-7830

Recruiters will receive a 10% discount on any State Society seminar.

(Conomikes seminars excluded.)

Why Do 60,000 Doctors Trust Us With Their Professional Reputations?

In an era of "not if, but when" a doctor will be accused of malpractice, your choice of professional liability coverage is extremely important. We know that *any* allegation can be devastating to both your professional reputation and your personal assets... making the company you choose critical to your future well-being. Many factors should be taken into account when making a decision.

Consider our financial strength and stability. We are rated A+ (Superior) by A.M. Best and AA (Excellent) by Standard & Poor's. No other company with an exclusive focus on the needs of the health care community has higher financial ratings.

Look at our experience. For nearly a century we have specialized in defending and protecting doctors. No other company has **successfully defended** more than 180,000 malpractice claims.

Local service is important, too. Our General Agents and Field Claim Managers work with you on every allegation. They average more than 15 years experience working with doctors and the legal system.

Why do more than 60,000 doctors trust their professional reputation and personal assets with us? No other company combines nearly a century of experience with financial strength and the local service provided by The Medical Protective Company.

The Moss Rehabilitation Research Institute presents a 1½ day course on **Rehabilitation Research Methodology**

Friday, September 22 and Saturday, September 23, 1995
Albert Einstein Healthcare Campus, Philadelphia, PA

The course is appropriate for residents, attendings, and other clinicians who are beginning to consider the place of research in their careers. Practical and theoretical concepts necessary for an individual program of research are presented, with special attention to research ethics, study design, data analysis, and strategies for obtaining funding for research. The course format moves between didactic lecture presentations and intensive small-group workshops. Registration cost, including meals and breaks, is \$125.

Faculty on staff at MossRehab Hospital and the Moss Rehabilitation Research Institute include:

- Alberto Esquinazi, MD *Director, Gait Laboratory*
- Gary Goldberg, MD *Director, Electrodiagnostic Laboratory*
- Nathaniel Mayer, MD *Director, Drucker Brain Injury Center*
- John Melvin, MD *Vice President for Medical Affairs*
- Myrna Schwartz, PhD *Director and Investigator, Neuropsychology Laboratory; Associate Director, Research Institute*
- Mary Segal, PhD *Investigator, Outcomes Research*

Integration Insider

Analysis of the emerging health care marketplace in Pennsylvania and beyond.

This ongoing column updates Pennsylvania physicians on the state of managed care in the commonwealth and nationwide. News, divided regionally, is derived from press reports. For more information about this topic, call the PennMed Member Services Company (PMSCO) at (800) 228-7823 or (717) 558-7750.

1 • Blue Cross of Western Pennsylvania is encouraging physicians in its managed care plans to give preference to six Pittsburgh hospitals in return for lower prices. The hospitals—University of Pittsburgh Medical Center, Shadyside Hospital, Magee-Womens, St. Margaret Memorial, Passavant, and South Hills Health System—have agreed to sharply reduce prices they charge to the insurer. Blue Cross's managed care network includes 800 primary care physicians and 38 hospitals, and serves more than 500,000 subscribers. *[Pittsburgh Post-Gazette]*

5 • Several hospitals in the Harrisburg area have taken steps toward forming two large health care systems. One alliance involves a merger between Polyclinic Medical Center and Capital Health System; the other would be an alliance between Penn State's Milton S. Hershey Medical Center, Holy Spirit Hospital, Carlisle Hospital, and Community General Osteopathic Hospital. An antitrust investigation of Capital Health System by the state attorney general's office is nearing completion. *[Central Pennsylvania Business Journal; Patriot News, Harrisburg]*

• Hamilton Health Center, Harrisburg, has expanded its list of primary care physicians participating in its Healthmate program, an HMO for Medicaid recipients in Dauphin County. Until last month, nearly 5,000 clients were required to visit one of 10 physicians at two Harrisburg sites for primary care services. Three physician groups have been added to the list. *[Patriot News, Harrisburg]*

• Federal antitrust regulators have cleared Horizon Healthcare Corporation's proposed \$502 million acquisition of Continental Medical Systems, Inc., Mechanicsburg, reported in this column last month. *[Patriot News, Harrisburg]*

6 • Seven Eastern Pennsylvania hospitals have announced that they will form a partnership to offer a managed care plan by late this year. Involved in "PennCare" are: Lehigh Valley Hospital, Allentown; Doylestown Hospital; Grand View Hospital, Sellersville; Hazleton General Hospital; St. Joseph Medical Center, Hazleton; Muhlenberg Hospital Center, Bethlehem; and Gnadon Huetten Memorial Hospital, Lehigh. Penn State's Milton S. Hershey Medical Center will participate under contract for certain specialized medical services. *[Philadelphia Inquirer]*

9 • Pennsylvania Hospital, Philadelphia, has established a physician hospital organization to directly contract with third-party payers and employers. *[Hospital News, Philadelphia]*

• Riddle Memorial Hospital, Delaware County, is negotiating to join a regional health care alliance being formed by Thomas Jefferson University, Main Line Health System, and West Jersey Health System. Thomas Jefferson University, Philadelphia, and Main Line Health System, based in Radnor, are founding members of the alliance, called the Healthshare Group. Riddle Memorial is a short-term, acute-care hospital licensed for 241 beds. *[Philadelphia Inquirer]*

• Implementation of HealthChoices, a managed care plan for 650,000 low-income residents of Philadelphia and surrounding counties, has been put off for another year, pending a third study on the plan's potential savings. Two earlier studies reached conflicting conclusions about whether the plan would save money or not. The third study is expected to be completed this fall. *[Philadelphia Inquirer]*

• Jeanes Hospital, Philadelphia, has signed a letter of intent to join Temple University Health System as a clinical teaching site for the university's medical school. *[Philadelphia Inquirer; Patriot News, Harrisburg]*

• OakTree Health Plan, an HMO under acquisition by Oxford Health Plans, Inc., Norwalk, Connecticut, marked the move of its headquarters into Philadelphia with a ceremonial ribbon cutting in May. OakTree provides coverage to more than 40,000 Medicaid and commercial HMO members in Southeastern Pennsylvania. *[OakTree news release]*

• One Delaware Valley hospital leader believes as many as 7,500 hospital jobs could be lost in the Philadelphia area if multi-billion-

Upgrade Your Vacation With National Car Rental.

National Car Rental®/Interrent® keeps you moving with special coupons and rental offers you can use nationwide, throughout the year. And as the official car rental company of Walt Disney World® and Disneyland®, National® lets you share the Disney magic with an exciting special offer. So now you can have an even better vacation with National.

One Free Weekend Day (With Purchase of Two).

Present this certificate at National's rental counter to receive one free weekend day with purchase of two or more weekend days at the applicable weekend rates. Valid on a Compact through 4-door Full-size car at participating National locations in the United States. Reservations required. Contact your travel consultant or National at 1-800-CAR-RENT. Subject to terms and conditions listed on reverse side. Discount # 5708482. Valid through December 31, 1996.

The official car rental company of Walt Disney World, Disneyland, and Walt Disney's Magic Kingdom Club.

Call 1-800-CAR-RENT.®

One Free Weekend Day (With Purchase of Two).

Present this certificate at National's rental counter to receive one free weekend day with purchase of two or more weekend days at the applicable weekend rates. Valid on a Compact through 4-door Full-size car at participating National locations in the United States. Reservations required. Contact your travel consultant or National at 1-800-CAR-RENT. Subject to terms and conditions listed on reverse side. Discount # 5708482. Valid through December 31, 1996.

The official car rental company of Walt Disney World, Disneyland, and Walt Disney's Magic Kingdom Club.

Call 1-800-CAR-RENT.®

One Car Class Upgrade

Present certificate at National's rental counter to receive a one car-class upgrade on a Compact through 2-door Full-size car. Highest obtainable upgrade is to a 4-door Full-size car. Valid at participating National locations in the United States. Reservations recommended. Contact your travel consultant or National at 1-800-CAR-RENT. Subject to terms and conditions listed on reverse side. Discount # 5708482. Valid through December 31, 1996.

The official car rental company of Walt Disney World, Disneyland, and Walt Disney's Magic Kingdom Club.

CERTIFICATE TERMS AND CONDITIONS:

Valid for one weekend day with purchase of two or more weekend days for car class indicated at participating National locations in the United States (Not valid in Manhattan, NY). Subject to availability, blackout dates and capacity control. Weekend rate and time parameters, local rental and minimum rental day requirements apply. Cannot be used in multiples or with any other certificate or special promotion. Standard rental qualifications apply. Minimum rental age at most locations is 25. In addition to rental charges, where applicable, renter is responsible for: Optional Loss Damage Waiver, up to \$13.99 per day; a per mile charge in excess of mileage allowance; taxes; sur charges; additional charges if car is not returned within prescribed rental period; drop charge and additional driver fee; optional refueling charges; optional insurance benefits. Rental Agent Instructions: 1. Rental Screen 1 key 7 in "Type" field. 2. Rental Screen 3 key Discount ID in "Rate Recap" field and key applicable rate for one weekend day in "Dep Orig" field. 3. Write RA # and rental date below. 4. Retain certificate. Send certificate to Headquarters. ATTN: Travel Industry Billing.
RA # _____ Rental Date: __/__/__.

PROGRAM TERMS AND CONDITIONS:

1. Reservations must be booked in advance and are subject to availability. 2. Offer does not apply to vacation plans, group rates or any other special promotion. 3. Minimum stay of three nights required. 4. Offer valid August 27 through November 20, 1995 at selected Walt Disney World Resort hotels. 5. \$149 lead in price based on Disney's All-Star Resorts, adult double occupancy.

CERTIFICATE TERMS AND CONDITIONS:

dollar reductions in Medicare and Medicaid spending are approved. [Philadelphia Business Journal]

Facts, figures, etc.

- Adults 65 and over—who are spending \$75 to \$100 each month on supplemental policies to pay for services their traditional fee-for-service plans don't cover—are signing up with Medicare HMOs at a record pace. During the first three months of 1995, more than 15,000 Medicare recipients switched to an HMO. [Philadelphia Business Journal]

- Three senior Ridge administration officials have met twice in private with U.S. Healthcare Senior Vice President David Simon to discuss ways to change how the commonwealth regulates the growing HMO industry. [Patriot News, Harrisburg]

- A recent report issued by the Pennsylvania Department of Labor and Industry, looking at 117 different health care occupations statewide, found that orthopedic surgeons earned the most each year at an average wage of \$234,568. Plastic and reconstructive surgeons reported the highest average starting wage of \$138,724. One county reported that the average health care worker earned \$30,803 in 1993. [Philadelphia Business Journal]

- In an effort to meet the growing demands for primary care physicians in managed care plans, three of the state's medical schools hope to launch a program next year to retrain specialists in primary care fields. The University of Pittsburgh School of Medicine; Penn State's College of Medicine, Hershey; and Jefferson Medical College of Thomas Jefferson University, Philadelphia, have formed the Commonwealth Academic Health Coalition to jointly develop the program. [Pittsburgh Post-Gazette]

Managed care moves, state by state

- The National HMO Purchasing Coalition—comprised of 10 corporations nationwide—will choose HMOs for 600,000 workers and dependents in 27 state and metropolitan areas, including Philadelphia. The coalition hopes its efforts will push the HMOs to lower prices and allow employer groups to monitor the care provided by doctors and hospitals. More than 100 HMOs have bid for a contract. [Philadelphia Inquirer; New York Times]

- The Medical Society of Virginia has announced it is creating a statewide HMO in partnership with PHP, Inc., a North Carolina-based, physician-owned HMO. PHP Virginia, Inc., is open to all Virginia physicians and plans to be operational in Central Virginia this year. Membership fees will be between \$1,500 and \$3,000. Some observers question whether the HMO will be able to compete in Northern Virginia, where managed care penetration is heavy. [Washington Post; Modern Healthcare]

- Caremark International has agreed to purchase the 93-physician Largo Diagnostic Clinic, one of the largest multi-specialty practices in Florida. [Modern Healthcare]

"The AMA is not against cost savings. And we are not against managed care. It's managed profiteering that we're opposed to...As massive cost savings are funneled back along the profit pipeline—to pay executives and to pay investors. Money that is siphoned out of the health care system—and lost to it forever. These are dollars that could provide a level of coverage for the millions who stand like beggars at the window, outside the system, and looking desperately in."

—James S. Todd, MD, AMA
Executive Vice President,
in his speech to the American
College of Surgeons at its 80th
Annual Forum and Meeting in May

- A Tennessee state appeals court recently ruled that the Tennessee Medical Association (TMA) did not have "standing" to challenge TennCare, the state's Medicaid managed care plan. Standing means that a party has sufficient stake in a controversy to request legal resolution. TMA alleged that TennCare was developed without meaningful public and provider input, and that it violates Medicaid's requirement of adequate physician compensation. The appeals court held that, because TMA members contract directly with managed care

organizations and not with the state, they cannot show injury from the state's action. The court also held that TMA could not establish standing on behalf of patients because TennCare actually provides more services than under traditional Medicaid. [TMA v. Corker, Lexis 243 (TN App. 1995)]

- Blue Cross and Blue Shield of Tennessee is adding its voice to the chorus of disenchantment with TennCare. The Blues plan attributes an \$8.8 million loss in 1994 to inadequate reimbursement rates under TennCare and is asking for a 10 percent payment increase. [AMNews]

- The Maryland attorney general is investigating potentially illegal and unethical marketing practices by HMOs trying to attract Medicaid patients, including possible forgery and bribes. The attorney general has received reports that non-English-speaking patients have been enrolled by marketers who speak only English, that patients are told they must enroll in an HMO to keep their benefits, and that marketers are taught to select healthy, less-costly patients. [Washington Times]

- Some of Colorado's largest companies have announced plans to establish a coalition by the end of this year to monitor the quality of care provided by health plans. The coalition plans to develop a single set of standards and guidelines to measure plan quality and will also explore group purchasing possibilities. [Denver Post]

- The New Jersey Supreme Court has held that the New Jersey HMO Act permits HMOs to be sued directly by a patient for medical malpractice and that a physician can assert a cross-claim against an HMO in a malpractice claim for breach of contract based on the HMO's failure to coordinate a patient's care. [Dunn v. Praiss, 656 A2d 913 (NJ 1995)]

- The 3,105 participating providers in ChoiceCare, Cincinnati's largest HMO, have approved a plan for the organization to become for-profit, thereby allowing it to sell 20 percent of its stock to a capital partner to expand into nearby markets and develop new products. Participating physicians can purchase up to 20 percent of the stock in the new, for-profit holding company. Opponents of the plan are concerned that it will eliminate physician control. [Modern Healthcare]

Society Leaders Testify Before Ridge Officials, Legislators

In meetings with the new Ridge administration officials this spring, as well as in public hearing testimonies, State Society leaders have stressed quality of care and managed care safeguards as top priority health care issues of concern to Pennsylvania physicians.

Because the legislative session opened with a special session on crime, much of the activity on medicine-related measures took place in public hearings around the state. A series of testimonies by Society leaders as well as local physicians was coordinated by the State Society on a variety of issues.

Meanwhile, to ensure access to the Ridge administration's newest decision makers in Harrisburg, Society leaders have begun a series of meetings with new state cabinet officials.

Cabinet officials briefed

Secretary of Welfare Feather Houstoun was apprised of the Society's concerns on:

- managed care,
- the 1995-96 commonwealth budget,
- implementation of the department's primary care case management initiatives and managed care for Medical Assistance patients,
- the Society's involvement with the Department of Public Welfare (DPW) in a drug utilization review contract,

- possible revisions to the Medical Assistance Advisory Committee,
- health insurance organization (HIO) expansion in Philadelphia, and
- HMO profits and quality of care.

In March, Society representatives met with Insurance Commissioner Linda Kaiser to discuss a roster of issues, including:

- CAT Fund concerns and the need for medical liability reform;
- regulation of integrated delivery system global capitation and other risk arrangements, HMO licensing process, and third-party administration licensure;

- the need for managed care safeguards;
- the need for insurance reforms; medical savings accounts, auto insurance problems, and PROs; and
- medical payment increases.

At a meeting in May with Peter J. Jannetta, MD, secretary of the state Department of Health, the Society's priority issues were again discussed. This was followed by a lengthy meeting with key department staff.

Affordable health care

Representative Tom Gannon (R-Delaware) has introduced a bill which would provide for a minimum health benefit plan to be made available for working individuals and their families who otherwise would not be able to obtain such coverage. House Bill 5, the Affordable Insurance Measure for Family Health Care, is intended to cover all groups and businesses, and includes safeguards limiting exclusions for pre-existing conditions, etc.

Society President John H. Hobart, MD, and Delaware County Medical Society President C. Richard Schott, MD, testified before the House Insurance Committee regarding this bill, which is opposed by small business and the insurance industry.

Any willing provider

A series of public hearings are being held around the state concerning any willing provider legislation, specifically House Bill 630, Rural Patient Freedom of Choice. In addition to testimony by local physicians at the regional hearings, the Society is coordinating testimony of leaders, including Dr. Hobart, to voice the Society's consistent message that exclusion from networks for reasons unrelated to quality issues and without the right to appeal is unacceptable to physicians.

The Society is also reminding legislators that House Bill 630 is one of several legislative proposals which address necessary safeguards for patients and providers.

Certificate of Need

The repeal of the Certificate of Need (CON) process was under study by the House Health and Human Services Committee, as a result of House Bill 335. Drs. Hobart and James Yates testified before the committee on this issue in April in Harrisburg.

Despite the Society's efforts which resulted in corrective amendments to the Health Care Facilities Act in 1992, the CON process, especially for ambulatory surgical facilities (ASFs), has continued to be cumbersome and weighted strongly in the favor of hospitals and other existing providers. A 1994 Pennsylvania Commonwealth Court decision, in *Mercy Regional Health System v. Department of Health*, has greatly complicated and prolonged the CON reviews. In addition, Governor Ridge's proposed budget calls for the elimination of the Health Facility Hearing Board, which would have taken on increased responsibilities as the result of the court decision.

To address the CON problem, the Society's Ad Hoc Committee on Ambulatory Surgical Facilities plans to research cost studies from insurance companies, the Health Care Financing Administration (HCFA), and actuarial studies comparing surgery performed in physician offices, freestanding ASFs, and hospital outpatient departments.

Using research, coalition building, and legislative lobbying, the committee's goal is to achieve one of the following options:

- 1) remove ambulatory surgery from the Department of Health's list of clinical reviewable services, so that physicians will no longer need a CON to get a license for an ASF;
- 2) obtain less restrictive criteria in the State Health Services Plan; or
- 3) revise the Department of Health's need formula.

Welfare reform

Reforming Pennsylvania's welfare programs, a hotly debated issue in the

statewide media as well as the health care industry, was the focus of a series of hearings by the Senate Public Health and Welfare Committee in Harrisburg this spring.

Dr. Hobart prepared remarks which were made available to the committee in May. His testimony was postponed until June due to the committee's time constraints.

In his comments, Dr. Hobart noted that the State Society has long sought elimination of administrative hassles and burdens experienced by patients and physicians, and encouraged increased physician participation as Medical Assistance providers. He said the Society supports community-based efforts, such as the Family Care Network and Lancaster Community Health Plan (LCHP), and urges systematic planning for future changes in the welfare system which take into consideration input from patients and health care providers.

The Family Care Network, Dr. Hobart pointed out, "provides a monthly case management fee to the primary care provider plus fee for service for all screening and treatment provided to the patient, as well as for coordinating all referral care. Recipients are given a choice of primary care providers from which to select, or they are assigned if a selection isn't made. Assignments can be changed if circumstances warrant."

He noted that the Lancaster Plan, which has already begun, "will serve as a template for bringing managed care to the entire Medical Assistance population." This plan is different from other plans, he said, in that it intends to offer back-up coverage to the primary caregiver and will link the Department of Public Welfare with LCHP and with providers with respect to access to patient information in order to better coordinate and manage care.

"The situation in Southeastern Pennsylvania is less optimistic," Dr. Hobart said, because the attempt to expand mandatory participation HMOs in that region is on indefinite hold as the result of a settled lawsuit. "The HIO proposal would have severely limited the recipients' choice of providers to those who were selected by the plan they picked. The plan arbitrarily divided the region into three large geographic areas on the basis of population instead of other factors related to access."

"DPW didn't build into the plan sufficient input from providers or patients, or adequate safeguards to protect their rights and assure delivery of needed care," Dr. Hobart added. "Finally, the proposal didn't adequately force savings achieved from efficient management of care back into improvement of the services available. Instead, such savings would have gone into increased operating costs and profits of the selected HMOs."

Society representatives have begun discussions with Welfare Secretary Houstoun on the issue of physician-controlled integrated delivery systems. "Under such an approach, groups of physicians could go at risk for inpatient care, thereby better controlling utilization of such care," according to Dr. Hobart's statement.

"In my office, where we look for and ask about domestic violence, I ask that my patients not be penalized by my good record keeping."

—Virginia Hall, MD, in testimony before the House Insurance Committee in June

Domestic violence

Citing the domestic abuse suffered by her grandmother, Virginia Hall, MD, of Dauphin County, gave effective testimony before the House Insurance Committee in June.

Dr. Hall, an obstetrician/gynecologist from Dauphin County, urged passage of House Bill 1100 in its original form, the Unfair Insurance Practices Act, which would prevent insurance companies from discriminating against domestic abuse victims. Sponsored by Representative Patricia Vance (R-Cumberland), the bill would specifically prohibit insurance companies from denying, refusing to renew, or canceling insurance because a person has been battered.

Dr. Hall told the committee: "Of 437 insurance companies who responded to a survey conducted by Pennsylvania Insurance

Commissioner Linda S. Kaiser in March 1995, 122 companies admitted to denial of insurance or surcharges for domestic violence victims in life, accident, and/or health underwriting...Unfortunately, because 636 insurers (58 percent of 1,073 in the state) did not respond to Commissioner Kaiser's survey, we do not know how much more discrimination exists within the industry..."

"In my office, where we look for and ask about domestic violence, I ask that my patients not be penalized by my good record keeping. The current insurance practice discriminates against patients who get a comprehensive approach to care, where psycho-social considerations are included in maximization of health."

Genetic testing confidentiality

The confidentiality of genetic tests was of concern to Richard D. Baltz, MD, in his testimony before the Senate Health and Welfare Committee in June. Dr. Baltz, a Harrisburg pediatrician, chairman of the State Society's Interspecialty Section, and vice-chairman of the Society's Council on Education and Science, urged passage of Senate Bill 394, which would help ensure that genetic tests ordered by a physician would remain confidential between physician and patient.

"There will most likely be people who will wish to use this genetic information other than for medical decisions and counseling," Dr. Baltz said. "They will assume that they can reduce their own financial risk by practicing genetic discrimination. The Pennsylvania Medical Society believes they have no right to that information. It is confidential information that must remain between a patient and his or her physician."

Dr. Baltz also noted that "genetic tests are poor indicators of disease and even poorer indicators of disability from disease. Cases of 'incomplete penetrance' are common. In such cases, an individual carries genes that are characteristic of people who are susceptible to a given problem, but never develops any disease. The occurrence of 'variable expression' is also common. This means that different people will experience very different effects from the same genetic problem."

Blue Shield Revises Policy for Concurrent Care

The Health Care Financing Administration (HCFA) has revised its Medicare concurrent care policy guidelines, effective April 1995.

Xact Medicare Services, the Medicare carrier for Pennsylvania, will no longer maintain concurrent care claims processing screens, which in the past edited claims for concurrent care services. Carriers have been instructed to remove these screens, and to pay medically necessary concurrent care claims for physician services. To protect against abuses, carriers have been instructed to use the focused medical review process.

Also, Pennsylvania Blue Shield (PBS) private business has revised its payment policy for concurrent care, effective April 8, 1995. PBS defines "concurrent care" as care provided to an inpatient of a hospital or skilled nursing facility by more than one doctor during a specific period of time. This change in policy will no longer consider the specialties of cardiology, endocrinology, family practice, general practice, pediatrics, pediatric cardiology, preventive medicine, pulmonary diseases, and rheumatology to be the same as or comparable to internal medicine.

Further, the medical necessity clause in all PBS contracts will be enforced when determining the eligibility of concurrent care. The medical necessity for concurrent care must be established on the basis of the patient's condition as demonstrated by the reported diagnoses and other documentation. Concurrent care that does not meet the medical necessity criteria is not eligible for payment. A participating or preferred provider may not bill the patient for denied concurrent care.

For more detailed information on this change and other issues related to concurrent care, call the Society's Department of Medical Economics at (800) 228-7823 or (717) 558-7750.

ONE OF EVERY 10 HOURS SPENT IN CHARITY CARE

More than two-thirds of U.S. physicians are providing over \$21 billion in uncompensated care to

patients in financial need, according to a survey by the American Medical Association. The report found that 307,650 physicians rendered \$11.31 billion in charity or reduced-fee care to patients in need during 1994, and absorbed an additional \$9.82 billion in services for which payment was expected but never received.

Since 1988, AMA survey data have shown a steady increase in the number of physicians providing charity care and the amount of time physicians spend per week rendering free or reduced-fee care.

Nearly 68 percent of U.S. physicians provided free or reduced-fee care in 1994, a significant increase from 62 percent in 1988. Physicians spent 12.4 percent of their work time, one out of every 10 hours, on charity care. On average, a physician devoted 7.2 hours per week caring for the poor, up from 6.5 hours in 1990.

In releasing the report, AMA President Robert McAfee, MD, noted that, "Physicians take their ethical obligation to patients very seriously. For many patients, charity care is their only means for obtaining necessary

medical care. And until significant reform is achieved, it remains a critical part of health care delivery."

As in previous years' surveys, the proportion of physicians providing charity care varied by specialty and region:

- Across 10 specialty classifications, percentages of physicians who provide charity care range from 60 to 74 percent. Within this range, surgeons and radiologists most frequently provide charity care, while pediatricians and pathologists least frequently provide free care.

- Geographically, the percentage providing charity care ranges from 62 to 73 percent. More than 70 percent of physicians in the New England, South Atlantic, East South Central, West South Central, and Mountain states provide charity care. By comparison, fewer than 65 percent of physicians in the West North Central, Pacific, and East North Central states provide charity care.

- Rural or non-metropolitan physicians provide charity care more frequently (71 percent) than urban physicians (67 to 68 percent).

Tell Us Your Stories of Managed Care Interference

The Society has long argued the need for legislative and regulatory safeguards to protect patients from managed care policies that inappropriately deny payment for medical services. The most effective support for these arguments comes from real-life examples, which the Society is collecting through this initiative.

If you have a story you would like to share that may be convincing to non-physician audiences—legislators, regulators, the media, and the general public—we'd like to know about it.

To guide and ease your efforts, the Society has developed a Quality Alert Form (see opposite page). The Society intends the form to be user friendly for physicians; if you have suggestions about how to improve the form, we'd like to hear that too.

Fax or mail completed forms to Society headquarters at the address or number listed at the top of the form. Direct any questions to Dennis Olmstead in the Department of Medical Economics, Ext. 1050.

Quality Alert Form

How and Why to Use This Form: Use this form to document real-life examples of managed care practices that jeopardize quality of care. The Society is collecting these examples to prove the need for managed care safeguards. Information revealed on this form or during a follow-up investigation may be shared with government officials and the public. Please exclude any information that may identify a patient to assure patient confidentiality.

What is a "Quality Incident?": A quality incident occurs when a managed care plan denies or unduly delays medically appropriate care or engages in conduct that could result in a quality or access problem. Prospective payment determinations are considered care decisions—as the patient often elects not to proceed absent third-party coverage. Quality incidents also can occur in other managed care contexts. The payer's conduct may send the wrong message or otherwise encourage inappropriate provider behavior. Network exclusions also can adversely impact geographic and specialty access. Use a separate form for each incident or practice.

Please check the relevant boxes below to describe the incident or practice.

**Please explain below*

Utilization Review Problem

Type of Review

- ☐ Prospective review
- ☐ Retrospective review
- ☐ Concurrent length of stay
- ☐ Second opinion
- ☐ Case management

KePRO's Principal Clinical Coordinator

Donald E. Harrop, MD

During the past year, several of these columns have been devoted to the Keystone Peer Review Organization's (KePRO's) Health Care Quality Improvement Program (HCQIP), and although there have been some references to our principal clinical coordinator (PCC), we haven't really said much about the position or its accountabilities.

We are very fortunate to have Lewis T. Patterson, MD, of Camp Hill, as KePRO's PCC. He certainly has all the qualities necessary for gaining the trust and cooperation of the medical community, as well as having the clinical experience and knowledge, which he gained during his nearly 40 years as a highly regarded general surgeon. Dr. Patterson's valuable contribution to KePRO's HCQIP is one of the main reasons why the Health Care Financing Administration (HCFA) has been quite complimentary regarding our development and implementation of this new program.

We have mentioned that successful cooperative projects are the objective of HCQIP and that cooperative projects require collaborative efforts between the PRO and hospital medical staffs. Therefore, it necessarily followed that we would need someone who would take the lead in convincing hospitals to participate in these projects.

Remember, participation by hospitals in these local projects is voluntary. So, after

nearly 10 years of PRO review, and with all the punitive aspects of the program still fresh on the minds of physicians and hospitals, it is not always an easy task to obtain the necessary participation.

Our PCC is responsible for medical oversight of all HCQIP functions, including the evaluation of the design and the standards that represent current medical practice. The PCC must obtain input from the appropriate specialties to assure that any cooperative studies will be accepted by the medical community, and must travel to all corners of the state visiting with hospital medical staffs and administration to assure that they understand the purpose of each individual project and its desired outcome.

The PCC works closely with KePRO's Steering Committee—composed of physicians, hospital administrative staff personnel, nursing professionals, and consumer representatives—to receive information regarding the importance and relevance of particular studies to the various constituencies represented on the committee, and to assure that the study design appears adequate to achieve the desired outcome.

The PCC must also coordinate these activities with the KePRO management team to assure that policies and procedures are consistent with HCQIP goals, and HCFA directives and regulations. And, because of our interest in expanding our private sector business, the PCC must develop protocols that can be used in marketing HCQIP products to entities other than HCFA.

We have also worked with three part-time assistant clinical coordinators who share in some of the PCC's responsibilities. This number is expected to be expanded as we get further into the Cooperative Cardiovascular Project, a national study which will collect data on 100 percent of Medicare patients hospitalized during an eight-month period for acute myocardial infarction. ☐

Dr. Harrop, president of the Keystone Peer Review Organization (KePRO) offers KePRO news and views in this column each month.

Lewis T. Patterson, MD

“Lewis T. Patterson, MD...has all the qualities necessary for gaining the trust and cooperation of the medical community.”

—Donald E. Harrop, MD

Thoughts from (and for) Our New Secretary of Health

David Woods

The U.S. has the best health care system in the world, but it will deteriorate if altruism gives way to greed, if actuarial tables and budgets replace notions of caring, if research and development are stifled in favor of short-term exigency—and if the “bottom line” is allowed to rule everything.

So says Pennsylvania’s newly confirmed Secretary of Health Peter J. Jannetta, MD, who, until he took over the health agency and its more than 1,300 employees, had been chairman of the University of Pittsburgh’s neurological surgery department for almost 25 years.

Why, I asked him, would a successful academic physician with nothing to prove in a professional sense, gear up for such a challenge at an age—he’s 62—when most people are beginning to think about winding down?

Exactly. “I’ve exceeded my ambitions and talents by far,” he replied. “I’ve had more ego gratification than anyone needs. I felt the window was open to do something useful—to pay back.”

What does the new secretary feel would be useful in this commonwealth’s corner of a national health system that consumes 14 percent of the gross domestic product—or, roughly, one trillion dollars—while leaving Americans with health outcomes no better than, say, Britons or Danes, who spend less than half the percentage?

Well, mainly, he says, a different—a broader—perspective. “It’s more than just being a public health doc,” he says, meaning presumably making a giant leap from the traditional health department’s role in immunization and record keeping, and in the championing of safer sex and water. Dr. Jannetta says he’ll bring a proactive, creative, open-minded approach to the state of the state’s health...using modern managerial techniques and forward planning.

And what will Dr. Jannetta’s regime mean for the state’s 30,000 or so physicians? It will be a friendly relationship, he says; it will be built upon mutual respect. “I will listen to their concerns...and urge

them to act collectively, not just as individuals.” He believes the profession must do more than react to real or perceived problems; it must work proactively through its state and county medical societies and through its specialty organizations.

He invites dialogue with groups of physicians, and plans to set up regular meetings at which to help his confrères cope with the rapid and sometimes bewildering pace of change in medicine.

Closer to home, he plans to streamline the Harrisburg offices. He has, he says, already made some “excellent hires,” plans to hold weekly meetings with his senior people, to set goals, to think ahead. Above all, he says, he wants to get people involved in change.

So far as preventive medicine is concerned, Dr. Jannetta believes in the importance of working through parents and kids, and harnessing all forms of media to persuade the state’s citizens that health is a matter of personal responsibility, not just of medical intervention.

“We shouldn’t confuse change with progress,” says the health secretary, who seems all set to bring a well-honed scalpel to the task of bringing about the latter.

Before Dr. Jannetta starts to operate on the body politic, though, perhaps he would allow some suggestions from this member of a breed—editorialists—known never to be shy about proffering advice. Give thought, as the Brits and Canadians are now doing, to the serious limitations of government in influencing our health; foster a renewed professional pride, confidence, and optimism among your fellow physicians; give credence to the idea that health is largely a matter of individual responsibility and effort; accept that health care will always create the dilemma of infinite demand versus finite resources—and never allow yourself to be diverted, by precedence or politics, from your expressed intent to espouse excellence, dialogue, and the big picture.

After all, you have nothing to prove—or to lose. ○

Mr. Woods, former editor and publisher of the Canadian Medical Association Journal, is president of Healthcare Media International, Inc., Philadelphia, publisher of Medical Practice Communicator and International Digest of Healthcare Management.

Cult-Proofing Your Patients: A Guide to Diagnosis, Treatment, and Referral of Cult Victims and Survivors

Edward A. Lottick, MD

A 1992 survey of Pennsylvania physicians found that 20 percent of responding physicians reported personal or professional exposure to cult victims, and two percent reported experience in their own families. (PENNSYLVANIA MEDICINE, February 1993)

When I first conceived this writing project over a year ago, I was afraid that I would have to spend a lot of effort convincing everyone that cults are common and are cause for a great amount of concern. After all, in keeping with cult propaganda and arguments, Jonestown was perceived as extraordinary and basically unique; Waco was considered the result of government interference.

But in just the past year, we have read about the Solar Temple, Aum Supreme Truth, and now Oklahoma City. Can there be any doubt that major menace in this world results from one pathogenic organization or another? But only a few cults gain national media attention. We must seek understanding beyond the headlines. In addition to mass murder and mayhem, there are many individual tragedies resulting in death and debility that cumulatively are more numerous than the singular mass events.

That there is much morbidity and mortality in this pathogenic area should surprise no one. Depending on how we define a cult, there are anywhere from 3,000 to 5,000 cults in the United States alone, accounting for perhaps hundreds of thousands of current "subjects" and millions of former subjects. This trend portends a major public health problem whose dimensions have yet to be fully discerned.

The purpose of this guide is to enlist your help in alerting your patients, as well as your family, friends, and associates, to this alarming trend, and to help you recognize cases of cult involvement.

Cults and physicians

Although cults are certainly everyone's problem, we physicians are uniquely positioned to help those endangered and impaired by destructive groups that are harmful to health and well-being. We can be an effective resource for both ensnared victims and their usually horrified and frequently paralyzed family and friends. Effective and early response is of great help. The more deeply a victim becomes involved, the more difficult is his or her recovery.

Like most professionals, physicians receive very little instruction about harmful people or groups during college, medical school, or residency. Our lack of exposure also may leave some of us susceptible to the propaganda and manipulations of such groups. Very few physicians have systematically studied cults, and those who have are astounded at the extent of cults' use of deception and its surprising effectiveness.

The brochure accompanying this article was developed to introduce physicians to the subject, to help the unexposed to see through some of the deception, and to provide some suggestions about how to respond effectively.

Why get involved?

Physicians are used to being in the trenches, and are skilled at front-line diagnosis and management of complex injuries. What group besides physicians would therefore be more apt to interface with victims, and be more appropriate and able in recovery efforts? If we don't get involved, who else will? Recovery efforts become more and more essential—and medical interventions more and more expensive—if we fail to develop and implement better methods of prevention and education.

Diagnosis

Destructive cult involvement requires sophisticated diagnosis techniques, because

Dr. Lottick, a family physician for 25 years, is past president of the Luzerne County Medical Society (LCMS), editor of the LCMS Bulletin, and State Society 12th District trustee. In 1993, he received the John G. Clark, MD, award for distinguished scholarship in cultic studies, and is active in cult education and research.

the nature of a particular group may not be readily apparent. This area is complicated by the fact that many cults use highly effective deception, especially while recruiting, so that a prospect is quickly ensnared and totally unaware of the nature of his or her new group of friends. By the time the new subject develops some knowledge of the group, he or she may already have burned bridges—contact with friends, family, and physician, and/or be deep in denial.

Vulnerable targets for the pied pipers of the cult world include anyone in a period of transition from one situation to another, such as graduation from high school or college, loss of or change in a job, retirement, a recent move, divorce, or death of close family or friends. Anyone with assets or access to money is of special interest to many cults. Some cults even instruct their “clergy” to study the obituaries so that they can target the affluently bereaved.

Signs of cult involvement

Radical personality and behavioral changes are often observed. For example, the sloppy may become neat, or the neat may become sloppy; the promiscuous may become celibate or the celibate become promiscuous; an intense person may become fanatic, or vagueness and indifference may supervene.

The “recruit” may begin speaking an obscure language whose meaning is known only to the initiate. He or she may develop a puzzling emotional distance from the formerly near and dear. There may be unexplained absences or even abrupt departure from home. Disorganization and absence of any ability to plan or concentrate may suggest depression. Pressure of speech and action and/or signs of anxiety may develop.

Cult recruits are frequently hyper-vigilant, may manifest dilated pupils, tachycardia, and moist palms, and always seem to be in a hurry. The recruit may seem spaced-out or may flip-flop between his or her old personality and the newly imposed “cult personality.” The recruit may frequently lose a train of thought or enter into periods of distraction or dissociation. Associations may seem loose.

Psychosomatic complaints may appear. A recruit may seem lacking in relevance with bizarre associations suggesting schizophrenia. Odd and meaningless language may replace formerly organized speech. Cult involvement may precipitate,

aggravate, or imitate florid psychoses. Severe depression to the point of psychoses may occur in the cult setting. Despite these startling changes, cult victims frequently deny that anything is wrong.

Cults may discipline, punish, and sequester afflicted members, even those with florid psychosis. Medical neglect is also very common. Debilitating illness or cancer may be far advanced when the patient is abandoned on the doorstep of a hospital.

Because of the cult’s assault on the victim’s ego defenses, the cult’s removal of the victim’s support systems, the cult’s inculcation of guilt, a sense of betrayal by family, and feelings of profound hopelessness, suicide is common.

How physicians can help

Physicians can play a crucial role in the course of medical practice or community exposure just by being alert. If a patient says: “I can’t understand what has happened to my son (or daughter, brother, sister, mother, father, grandparent, or friend) since they became involved with that group,” become especially alert and obtain further information.

Alternatively, a patient may present to your office with signs of trauma, abuse, neglect, or psychiatric symptoms such as anxiety or depression, or manifest psychosomatic complaints or odd symptom clusters. A cult connection might not be readily apparent. Ask such a patient: “Are you or have you ever been involved in a group that demands or has demanded a great deal of your time, controls or has controlled many aspects of your life, and discourages or has discouraged any form of dissent?”

Unless you ask questions of the victim or former victim and his or her family, many cult cases will not come to light. If the patient, family, friend, or associate is not sure of a cult connection, a copy of the enclosed brochure might be used to clarify the nature of an unknown organization. Case-finding questions should be asked of attempted suicides and of the families, friends, and associates of completed suicides. Your attention is especially directed to the cult morbidity and mortality registry listed in the accompanying insert.

Once aware of a cult connection, some information and support can be of major benefit and might circumvent years of debility for the victim, and monumental anguish for the victim’s family and friends. ☉

Choosing Your Path to MEDLINE®

Fred D. Baldwin

Competing vendors package the seven million article citations in MEDLINE® in many different ways. When the information inside is the same, how can you tell solid value from just another pretty interface? This article, one in a series on medical information technology, discusses points to consider before making a commitment.

MEDLINE

A popular computer magazine recently touted a new online medical information system as not only better than MEDLINE; it described MEDLINE itself as a "failure." That was like saying that sales of the Toyota Camry are good because the concept of a family car never caught on. Apparently the writer didn't realize that the system he admired was simply one version of MEDLINE or, more precisely, one of many ways to extract information from the world's largest medical database.

MEDLINE, of course, is the most comprehensive database in a collection of about 40 databases (known collectively as MEDLARS®) maintained by the National Library of Medicine (NLM), which is part of the National Institutes of Health, Bethesda, Maryland. MEDLINE currently contains about seven million bibliographic entries and is growing at a rate of nearly 400,000 new citations every year. Many physicians consider it to be their best hope for keeping up with rapidly changing medical knowledge.

An easy and inexpensive way to tap into MEDLINE is a piece of software called Grateful Med®, available directly from the NLM and described earlier in this series ("Rocking Along with Grateful Med," December, 1994). But many users prefer reaching MEDLINE by other routes.

So what are your choices? The NLM has licensed MEDLINE to more than 70 organizations worldwide. The licensees include commercial vendors, nonprofit organizations, and foreign governments. Each is free to design its own packaging for the

huge database. This packaging—often called a "shell" or "front-end software"—typically involves more than just another pretty interface. It establishes the rules that you must follow in searching the database. In practice, of course, you won't be faced with 70-plus choices; you're more likely to hear about a half-dozen or so packages designed mainly for physicians.

In any case, your first decision involves two totally different approaches: online access vs. CD-ROM. Among the online options, two of the best known (besides Grateful Med) are PaperChase and Physicians Online®. Popular CD-ROM versions include Ovid®, Silver Platter®, and a few others. A vendor, a librarian, or a colleague may urge you to choose any of these. (Hopefully, you won't be told that one of them is "better than MEDLINE.")

Rather than attempting to review specific packages, let's consider the two basic options. Online access has several advantages. Your initial costs are low. Where hardware is concerned, you need only a computer and a modem (the device that permits your computer to communicate over the phone lines with other computers). Modems cost less than \$100 and can be added without difficulty to older computers. Specialized search software may be free or cost as little as Grateful Med's modest \$30 price tag.

What's it cost?

Once you're set up, you pay only for the searches you do, and a typical literature search will cost only a couple of dollars or, under some circumstances, nothing. (Physicians Online charges nothing, but displays ads for prescription drugs on your screen.) You can do hundreds of searches for the price of MEDLINE on CD-ROM.

There are other advantages to online searching besides price. For one thing, you have access to the very most recent literature, usually within a few weeks of its first appearance in print. For another, you can connect to other databases as easily as MEDLINE, and this can make searches

Now There's A Cure For Your Office Headaches!

Introducing the *Medical Mastermind* ...
the practice management software
that's just what the doctor ordered.

Medical Mastermind is the
one office automation package
that can make your office more
efficient...maximize cash flow...
increase productivity...and enhance
your bottom line. That's because
there are 101 indispensable features
available for your practice to utilize.

Installation and training is
never a problem for you.
Software Unlimited takes care of
everything...including refresher
and follow-up support.
You and your staff will soon be
operating like pros even if you have
no prior computer experience.

What's more, with continual
updates from Software Unlimited,
your program will never go out of
date. You'll always be in compliance
with the latest regulations and
insurance requirements. And our
software package will satisfy your
needs as your practice grows - just ask
any of our existing clients.

To learn more about the Medical
Mastermind, just call the office closest
to you. All of our locations are listed below...

Software Unlimited, Inc.

more efficient. For example, NLM has created similarly specialized MEDLARS databases for AIDS, cancer, toxicology, and numerous other subjects.

Finally, many commercial vendors subscribe to databases not developed by NLM. Even if you seldom consult them, their easy availability is a modest plus for the on-line option.

On the other hand, you shouldn't rule out CD-ROM, particularly for a group practice. The initial costs are steeper, but the costs of use are effectively zero.

On the hardware side, you'll of course need a computer equipped with one or more CD-ROM drives. Such drives are almost standard equipment on new machines these days and, like a modem, one drive adds as little as \$100 to your total equipment bill. Unfortunately, for handling databases as large as MEDLINE efficiently, you may need three or more such interconnected drives unless you can accept the frustration of changing CD-ROM disks often. You can add CD-ROM to many older computers, but not to all of them. And upgrading an old machine may require other add-ons that will increase your initial expense.

Your main cost, however, will be for the database itself. If you buy all of MEDLINE, you could easily end up spending more for a short stack of shiny CD-ROM disks than you paid for your computer—something on the order of \$3,000, plus the costs of periodic updates. But you don't have to buy all of MEDLINE. Some vendors offer subsets of the database for far less money than the collection of seven million citations costs. You might, for example, get the most recent five years of references on cardiology for around \$500 per year, including quarterly updates.

Divided among several members of a practice, these costs may look cheaper

than online searches, and there's an added benefit to flat-rate pricing. Because the meter isn't running, you and your colleagues' use of MEDLINE is likely to increase even as your time spent per search decreases. Once you've bought a database and its shell on CD-ROM, you can play around with it as much as you like without worrying about online connect charges, and you won't have to wait for connections at peak usage hours. If you have patients willing and able to read technical literature on their own, you can provide them with a printout of promising citations and abstracts, potentially within seconds.

Actually, online services and CD-ROMs aren't mutually exclusive choices for reaching MEDLINE. Going for both may be reasonable, especially for a group practice.

Recall that the hardware costs are fairly low for both modems and CD-ROM, especially when you're buying a new computer. In fact, you'd certainly want any new machine to have both a CD-ROM drive and a high-speed fax-modem, just because the online world and the new libraries of multimedia both have so much to offer, quite apart from MEDLINE access.

If there are medical or other specialties within MEDLINE that you're sure you and your colleagues will search often, you might find out if a CD-ROM vendor provides that kind of special product. Conversely, you'd go online—using Grateful Med, PaperChase, or something else—to search those parts of MEDLINE or other databases that you consult less frequently. You'd also go online on those occasions when you felt it crucial to be sure you were locating the absolutely most recent literature—for example, recently issued reports on clinical trials of a new drug.

This approach parallels how you probably meet your automotive needs: using your own car in the area where you live and work, but renting one after you've flown to a far-away conference.

You'll have more to consider once you've decided on a basic strategy. Software and services differ in important aspects: price, ease of use, how searches can be customized, links to document-ordering services, ability to create print files, and more. Some of these features merit future articles, but it's hard to go too far wrong. The federal government's investment in creating MEDLINE and its cousins has made access to the latest medical information a bargain, and private competition in designing ways to find that it has made access easier. ○

Penn's OncoLink Recognized for Traveling Superhighway

OncoLink, created at the University of Pennsylvania Cancer Center, Philadelphia, and featured in the April issue of *PENNSYLVANIA MEDICINE*, was selected as a finalist for the first National Information Infrastructure Awards, which recognize outstanding achievement using the information superhighway. Penn's program was chosen from more than 500 entries, including those from the Smithsonian Institute and Centers for Disease Control and Prevention.

A cancer information resource available on the Internet, OncoLink was created in March 1994 and includes thousands of documents ranging from medical journal articles to personal accounts and advice from cancer patients and their family members. The information is edited by Joel W. Goldwein, MD; Ivor Benjamin, MD; and Loren Buhle, PhD, all of whom are cancer center staff at Penn.

Know How Best to Protect Patient Confidentiality...

and If and When to Violate It

Trust between physician and patient is a critical element in effective medical care. Gaining vital patient information is key to determining an accurate diagnosis and the best possible treatment regimen.

This sounds simple enough. However, practicing medicine in today's society poses a myriad of legal and ethical considerations regarding patient confidentiality. With the need to maintain records practically indefinitely, in the event of future lawsuits, and with the advent of computerized medical record-keeping, safeguarding confidential information has become much more difficult.

As a physician, understanding the scope of your duty to protect patient confidentiality has become essential to keeping your practice out of trouble.

Use the highest level of care

Be able to show that you use the highest level of care to avoid releasing sensitive information. Limit access to your records to only staff who actually need it. Have a clear written policy regarding confidentiality. Dismiss any staff member who, even inadvertently, reveals confidential information.

Pennsylvania law mandates that physicians retain patient records for a minimum of seven years. Smart practitioners keep records forever.

Consider patient confidentiality in deciding how to store your records. If you are dealing with an outside company, be sure to check references, consult with appropriate regulatory agencies, contact the Pennsylvania Medical Society, and talk with your health care attorney before signing any contract for services.

Make sure your records are kept under physical or electronic lock and key. If you use a self-storage facility, be aware that Pennsylvania law allows the owner to seize the contents of a self storage unit if you are late with the rent. With 30 days' notice,

the owner may dispose of the contents in any manner he or she sees fit. Make sure the owner understands your special needs and agrees to talk to you personally before making any rash moves with your records. Protect yourself against an innocent error by your clerical staff or a check lost in the mail.

Chances are good that your practice has a computer or will have one shortly. Most practice computers are internal; there is little chance, for example, that someone in your office could inadvertently file a patient's record on an Internet bulletin board. However, if you work in a multi-site practice, be aware that telephone lines can be tapped for computer data. Be sure your records are password protected, and backup all records on disk.

Should you reveal information?

Despite all your special care, there may be cases in which you believe you must reveal confidential information. You may also be held liable for damages that result from your not revealing confidential information.

Consider a hypothetical situation: Appropriate diagnostic tests confirm your suspicion that a married patient seeking treatment has AIDS. Should you tell the spouse? Your duty to maintain confidentiality conflicts with your duty to notify a likely victim. In this scenario, the spouse is an identifiable potential victim; it is more than reasonable to foresee that the spouse could contract the disease by virtue of the marital relationship. If the spouse later tests positive for AIDS and can show that your not disclosing the information caused him or her to get the disease, you could be liable, if sued.

The result might be the same if the potential victim is the public at large. In most states, there are statutory requirements to report certain types of communicable diseases, suspected child abuse, and injuries—gun-shot wounds, knife wounds, etc.—that are

The Health Care Group

likely to have occurred during the commission of a crime. The commonwealth deems the safety of the community to override the patient's right to confidentiality.

Pennsylvania requires physicians to notify the Department of Health of all cases of AIDS, sexually transmitted diseases, hepatitis, rabies, food poisoning, animal bites, lead poisoning, and a whole host of other conditions. For a complete list, contact the department.

Protect yourself

Follow these steps to protect yourself in these and similar situations:

- When you suspect a disease that might pose a threat to others, seek the patient's consent to disclose the information to third parties who might be at risk.
- If a patient whom you suspect poses a health threat to others refuses to give consent to reveal critical information to at-risk third parties, advise the patient that you may be required by law or by the local code of medical ethics to reveal the information in the event that the diagnosis is confirmed.
- Make this advisory about the limits of confidentiality a part of the counseling you perform prior to running any diagnostic tests.
- Be sure to follow all statutory reporting requirements of the state.
- When you notify the appropriate authorities, inquire about notification to other potential victims.
- Document everything. Keep detailed records of what you did and said, and the applicable dates.
- Consult your health care attorney before revealing confidential information to third parties other than the required governmental authorities.

Treatment of Congestive Heart Failure: What's New?

Allen F. Shaughnessy, PharmD

New guidelines in treating congestive heart failure promote early detection.

An estimated two million Americans have congestive heart failure (CHF), and 400,000 new cases are diagnosed each year. About half of those afflicted will be hospitalized during the course of the year, and about one in 10 will die each year from the disease.

Not all of the news, however, is so bleak. We now have treatments that, especially with early detection, can decrease mortality, slow the onset of symptoms, and decrease hospitalizations.¹⁻⁴

A recent expert panel looked at all of the information available on the treatment of congestive heart failure and developed a set of guidelines.⁵ For each of the 44 recommendations they made, they assigned a "score" to the evidence supporting the recommendation.

The best evidence came from well-conducted, randomized, controlled trials or cohort studies. Out of all of the recommendations, which ranged from sodium restriction to heart transplantation, only five were supported by this best level of evidence. These guidelines are discussed in this article.

Recommendation I

Treat heart failure before symptoms occur. The concept underlying this recommendation is that heart failure occurs before onset of "congestive" signs and symptoms. Early identification and treatment of heart failure, by evaluating ejection fraction (EF) in patients who have experienced a myocardial infarction, can decrease the development of symptoms of heart failure and decrease the risk of mortality.

Angiotensin-converting enzyme (ACE) inhibitors are the only medical treatment shown to slow the decline in heart function that occurs with the development of heart failure. All patients with an EF of less than 35-40 percent should be placed

on one of these agents unless specific contraindications exist (see Recommendation II).

Recommendation II

All patients with heart failure should be given an ACE inhibitor. Due to their effect on mortality, ACE inhibitors should be the keystone of heart failure therapy. In patients with mild symptoms, such as fatigue or mild dyspnea, an ACE inhibitor can be used alone. A diuretic then can be added if the patient exhibits symptoms of volume overload.

Most patients, even those with low blood pressure or diminished renal function, can be started on an ACE inhibitor. Unless the patient has orthostatic hypotension, an ACE inhibitor can be used with a systolic blood pressure as low as 90 mmHg. Renal function is usually not affected unless the patient is volume depleted, and patients can be continued on an ACE inhibitor unless their serum creatinine increases by more than 0.5 mg/dL.

There are three contraindications to ACE inhibitor therapy. Patients who have had a previous adverse reaction, especially angioedema, should not be tried on any of the agents. Patients with a persistent serum potassium greater than 5.5 mEq/L, or with a systolic blood pressure less than 90 mmHg, also should not receive an ACE inhibitor.

Recommendation III

Digoxin may help with symptoms in some patients. Though used for 200 years, digoxin has not been shown to affect mortality due to heart failure. It has been shown to provide additional symptomatic control in patients with moderate to severe failure.^{6,7} Digoxin is not helpful, and perhaps may be harmful, in patients with diastolic dysfunction (EF greater than 45 percent in patients with CHF symptoms).

The typical dose of digoxin is 0.25 mg per day. The therapeutic range for digoxin serum levels has been lowered to 0.7-

Dr. Shaughnessy is director of research and pharmacology education, Harrisburg Hospital Family Practice Residency.

1.5 ng/mL. Digoxin interacts with many drugs; however, the interactions of greatest concern are with quinidine, verapamil, and amiodarone. If any of these drugs are added to a patient who is taking digoxin, the dose of digoxin should be decreased 50 percent.

Recommendation IV

Use nitrates and aspirin in patients with angina. The concept underlying this recommendation is that other agents that are useful in treating angina can adversely affect the patient with heart failure. B-blockers and calcium channel blockers, for the most part, decrease cardiac output and can worsen symptoms. Some patients will improve with B-blockers, but we don't know whom, yet.

ACE inhibitors are not effective in the treatment of angina, and a patient with chest pain should receive a nitrate for symptom control. To decrease the likelihood of infarction or reinfarction, all patients also should receive low-dose aspirin therapy.

Recommendation V

Don't routinely screen for arrhythmias. Arrhythmias and heart failure present a clinical quandry. Ventricular arrhythmias are common in patients with heart failure, and sudden cardiac death occurs in 50 percent of patients. In addition, the presence of ventricular ectopic activity or non-sustained ventricular tachycardia worsens the prognosis of CHF.

However, no treatment is available to decrease mortality in patients with asymptomatic arrhythmias. The cardiac arrhythmia suppression trial (CAST) found increased mortality in patients with CHF and six or more ventricular premature depolarizations per hour who were treated with antiarrhythmic agent.⁸

Screening for arrhythmias is not routinely warranted, since we do not have effective treatment for arrhythmias that are identified. There is early support for the use of amiodarone (Cordarone) in patients who have had a myocardial infarction and who have an EF less than 45 percent.⁹ Further study is needed before this therapy is recommended.

Conclusion

Although we have several options available for the treatment of heart failure, many of the frequently used and probably effective therapies have never been formally studied. The best information we have tells us that ACE inhibitors should be used in just about everyone with a diminished EF or signs and symptoms of heart

failure. Future study will further define the roles of digoxin and antiarrhythmics.

Other questions regarding heart failure remain: What is the best way to initiate and titrate drug therapy? Do diuretics improve or worsen mortality risk? Which diuretic is best for heart failure? What is the value of anticoagulation? Who will benefit from B-blockers? These questions may be answered in the future and will lead to an updating of these guidelines.

The guidelines used to prepare this article (see reference 5) are available by calling the AHCPR Publications Clearinghouse at (800) 358-9295 and asking for Clinical Practice Guideline No. 11 (Publication No. 94-0612).

Resources available at Center

The Center for Professional Drug Education and Information offers the following brochures free of charge to Pennsylvania physicians:

For the physician: *Quick Reference Guide: Management of Patients With Left Ventricular Systolic Dysfunction.*

For the Patient: *Living With Heart Disease. Is it Heart Failure?*

To obtain the above information, please contact the Center at (800) 228-7823. ☐

Q&A: Drug Utilization

The State Society's Center for Professional Drug Education and Information receives numerous inquiries from physicians about drug interactions, side effects, and other drug-utilization issues. In an effort to share this information, the Center selects a question of general interest to appear in this column each month. The response, prepared by the Center's clinical pharmacist, is based on an abstract of the latest scientific literature that has been developed with input and knowledge of experienced clinicians. If you have a question that you think would be of general interest, please contact the Center at (800) 228-7823.

Q: I have a patient who is not responding to a sulfonylurea agent. Can Metformin be used as an alternative or as an adjunct? How is it dosed, and what is the maximum dose? Is lactic acidosis a concern? What signs and symptoms are apparent in lactic acidosis?

A: Metformin (Glucophage R) is a new agent that has a different mechanism of action than the older hypoglycemic agents. It may be used alone or in combination with a sulfonylurea agent such as glyburide or glipizide. When used in combination, it will decrease blood sugar an additional 50 mg/dL.

Glucophage R is available as 500-mg and 850-mg tablets. A typical starting dose is one 500-mg tablet twice a day, given with the morning and evening meals. The minimum effective dose is 1,500 mg/day. Gradual dosage increases can be made in increments of 500 mg every other week, given in divided doses, up to a maximum of 2,500 mg/day. Initial and maintenance dosing should be conservative in elderly patients, due to the potential for decreased renal function.

"Starting low and going slow" in terms of dosing may help reduce gastrointestinal side effects. The most commonly seen side effects—diarrhea, nausea, vomiting, abdominal bloating, flatulence, and anorexia—appear to occur in approximately 25-30 percent of patients, particularly during initiation of therapy.

Lactic acidosis is a rare but dangerous complication of metformin therapy. The risk of lactic acidosis increases with degree of renal dysfunction and the patient's age. The risk of lactic acidosis may, therefore, be significantly

decreased by regular monitoring of renal function in patients taking metformin and avoiding use in patients with a serum creatinine greater than 1.5 mg/dL in males and greater than 1.4 mg/dL in females.

Lactic acidosis is also more likely to occur in patients with liver disease and following acute or chronic alcohol use.

Patients should be advised to notify their physicians if unexplained hyperventilation, myalgia, malaise, unusual somnolence, or other nonspecific symptoms occur. Once a patient is stabilized on metformin, GI symptoms, which are common during initiation of therapy, are unlikely to be drug related.

Your Comments Are Welcomed

The Society's Center for Professional Drug Education and Information welcomes your questions and comments about issues relating to prescribing, drug interactions, or specific pharmaceuticals. Use this form to fax your questions and/or comments.

Graduation '95

National Speakers Offer Insights to Medical Grads

Each spring, a host of national leaders and celebrities are invited to speak at graduation ceremonies at Pennsylvania's eight medical schools. Among those offering advice and insight to this year's graduates were: Christine Cassel, MD, the first woman president of the American College of Physicians; Former Surgeon General M. Joycelyn Elders, MD; and National Public Radio's Cokie Roberts.

Dr. Cassel delivered the keynote at the 143rd commencement ceremonies of the **Medical College of Pennsylvania (MCP)**, held Saturday, May 13, at the Academy of Music, Philadelphia.

"Women's health is a model for medicine," Dr. Cassel said in her address, "because it is a consumer-driven movement. As women became more knowledgeable about the health of their bodies and minds, they demanded more understanding and time from physicians. In response to this, physicians have had to change their approach from disease-centered care, focusing only on the illness and the organ system, to patient-centered care, focusing on the entire patient, including family history and socioeconomic factors."

Dr. Cassel concluded, "The result has been more compassion and humanness, qualities that would enhance all areas of medicine from clinical research to geriatrics." Dr. Cassel and Dr. Judith Rodin, president of the University of Pennsylvania, received honorary degrees at the ceremonies.

The 143rd class of MCP, with 136 graduating members, is the largest in the history of the college, which opened its doors in 1850 as the first medical school in the country for women. The Class of 1995 is comprised of 76 women and 60 men.

Dr. Elders, who was the first African American and second woman to hold the post of surgeon general, spoke at **Hahnemann University**

School of Medicine commencement ceremonies, held Friday, June 2, also at the Academy of Music. In her speech, entitled "Medicine in the 21st Century," she offered her perspective on the future of health care and medical education.

Also at the ceremonies, Dr. Elders received an honorary doctor of medical science degree. Hahnemann's School of Medicine conferred medical degrees on 159 students (99 men and 60 women).

"Physicians have had to change their approach from disease-centered care...to patient-centered care...The result has been more compassion and humanness."

—Christine Cassel, MD, President American College of Physicians

Cokie Roberts, NPR news analyst and ABC News correspondent, spoke at the graduation of **Jefferson Medical College of Thomas Jefferson University**, held Friday, June 9, in Philadelphia. Two hundred nine students were awarded MDs at the ceremonies.

Along with Roberts, also receiving honorary doctor of science degrees were: Charles Merieux, MD, vaccine developer and producer from France; Dabhanom Muangman, MD, DPH, public health educator from Thailand; and Fritz G. F. Melchers, PhD, an immunologist from Switzerland.

This year also marks the 125th anniversary of the Alumni Association of the medical college. Since its founding in 1870, Jefferson has awarded 26,751 medical degrees. Of its living alumni, nearly 1,000 currently practice in Philadelphia,

and over 4,200 are in practice throughout the commonwealth.

Primary care was the focus of the commencement speech at **Philadelphia College of Osteopathic Medicine (PCOM)** ceremonies on Sunday, June 4, in Philadelphia. "The cornerstone of good medical care is good primary care," said Leonard Finkelstein, DO, president and chief executive officer of the college.

"What's more," he added, "it's been estimated that if 50 percent of graduating medical students were prepared to enter practice in primary care, the health care system could save as much as \$5 billion by the year 2000." Sixty-four percent of PCOM's 216 recent graduates plan to enter some type of primary care practice, according to a class survey.

Other Pennsylvania medical school ceremonies included:

- Howard Torman, MD, health and medical correspondent for "CBS This Morning," delivered the address at the 25th commencement exercises of **Penn State's College of Medicine**, May 21, at Founder's Hall, Milton Hershey School, Hershey. Dr. Torman, a 1973 graduate of the medical school, congratulated this year's 100 graduates.

- Author Steve Bergman spoke at the **University of Pittsburgh School of Medicine's** graduation, May 22, at the Carnegie Music Hall. Bergman, a member of the Department of Psychology at Harvard Medical School, is best known for his book, *The House of God*, written under the pen name, Samuel Shem. Also speaking before the 130 graduates were Pitt professors Henry Bahnson, MD, and Marc Mendlesohn, MD.

- Latonia Maria Ward, MD, president of the **Temple University School of Medicine Class of 1995**, addressed her classmates at the medical school's 91st annual commencement on May 18, in Philadelphia. Receiving MDs were 174 students. The day prior to graduation, 37 Temple students and teachers were honored for excellence in their studies, community, or teaching.

- The **University of Pennsylvania School of Medicine**, Philadelphia, honored 145 students at its commencement ceremonies, May 22, at the school's Irvine Auditorium.

Dream Come True Is Result of Hardship, Risk

In 1981, parents of typical 14-year-olds in the U.S. wrestled with the typical challenges: setting curfew times, how much TV to allow their children to watch, homework rules, carpooling and chauffeuring to after-school activities, sports, allowances, and so on. Half a world away, in Vietnam, the Nyugen family faced a question of considerably greater gravity: whether to send their oldest son, 14-year-old Phuong, on a journey fraught with uncertainty and great peril...to America via refugee boat.

Raised in a small, poor village outside Saigon (now Ho Chi Minh City), Phuong always knew he wanted to be a doctor. He excelled in his studies; however, he had to leave school in the sixth grade to go to work to help with family finances.

About this time, his family began to prepare—financially and emotionally—for Phuong's passage to freedom. To earn money for his journey, the family ferried hopeful émigrés at night in rowboats to larger fishing boats in Saigon Harbor. The fishing boats' ultimate destination: refugee camps and the gateway to freedom.

One night, it was Phuong's turn to leave and not look back. His journey was not without incident. After traveling for four days, the boat was hijacked at sea. All the money and valuables were stolen. "It amazed me how much people brought with them. All I had were my clothes," Phuong says.

A few days later, they arrived at a refugee camp in Bidong, an island in the Malaysian archipelago. They were lucky. More than 75 percent of refugees never make it; they are either captured or perish at sea.

After a few months in Bidong, Phuong was transferred to a camp in Bataan in the Philippines where he learned the mechanics of modern life, such as how to use electrical appliances and gas cooking. He was also miraculously reunited with his brother, who had made the journey two months prior. Both boys knew America was their ultimate destination, but the "waiting list" to get in was quite long. After a year, however, Catholic Charities was able to locate a foster home for them in Sussex County, New Jersey.

"When you're backed into a corner, you can either retreat and be comfortable, or you can put your back to the wall, take your chances, and fight for freedom and your dream."

—Phuong Wirth, DO
1995 PCOM graduate

Phuong entered seventh grade upon his arrival. He spoke no English, yet by the end of the school year, his level of comprehension was so advanced that he was able to skip the eighth grade. Matters at home were a bit more complicated—difficulties with his foster family prompted Phuong and his brother to seek another living situation. Catholic Charities found another family—this one headed by a bachelor with other foster children. The arrangement worked: "Wallace Wirth really helped us stay together, stay focused, and taught us so much," Phuong says.

Phuong found his first year of high school trying—not terribly so academically, but socially. Nevertheless, he made it through freshman year, kept focused on his dream of becoming a doctor, participated in sports, and graduated with honors. After completing a rigorous pre-med program at the University of Scranton, Phuong matriculated at Philadelphia College of Osteopathic Medicine in the fall of 1991.

Phuong always knew he wanted to go into family practice. What's more, he's a firm believer in the principal tenets of osteopathic medicine. "Preventive medicine is the key to lifelong good health. And I believe in treating the person and the lifestyle, not merely the disease and the symptom. If you don't have your health," he asks, "what do you have?"

Phuong plans to concentrate on internal medicine and would like to practice in a rural area, "maybe in a less affluent community, where I can really make a difference," he says. Also in his plans is an August 5 wedding to his fiancée, whom Phuong met at the University of Scranton.

Last year, Phuong returned to Vietnam to be reunited with his family. They had communicated by letter, but this was the first time they'd seen each other in 13 years. It was a very emotional, pride-

filled time, Phuong says. "I'd never seen my mother cry before. But when she saw her son, the doctor, she realized it was a dream come true, after much hardship and risk."

Phuong's philosophy: "When you're backed into a corner, you can either retreat and be comfortable, or you can put your back to the wall, take your chances, and fight for freedom and your dream."

(photo from *The Herald*, Sharon)
Mercer County physicians used this billboard, along with office posters, to show their frustration with insurance and hospital administrators' claims about containing health care costs. The effort gained local media attention.

COUNTY NEWS

MERCER COUNTY PHYSICIANS LAUNCH AD CAMPAIGN

To show their frustration with insurance and hospital administrators' claims about containing health care costs, members of the Mercer County Medical Society (MCMS) are using billboards and office posters to carry their message to the public. Their message: "Remember. Effective and affordable health care is still in the physician's office."

A billboard displaying this message was placed on Route 62, Mercer-Sharon, in April (see photo, above). MCMS President Thomas Armour, MD, told local media that insurance companies and hospitals are claiming credit for containing medical costs when at the same time they're spending huge amounts of money on advertising and construction.

Dr. Armour said he and other local physicians are concerned about Sharon Regional Health System's construction of HealthPlaces in the Shenango Valley, clinics which are affiliated with Blue Cross. He said that the "Express Care" and "Urgi-Care" centers of Sharon Regional Health System and Horizon Health System, respectively, are costly and unnecessary alternatives to patients seeking advice from their family doctors. He added, "The purpose [of the campaign] is to remind the

people that really you should be looking to your doctor for your care, not HealthPlaces or Express Care [centers]."

MCMS President Elect Joseph A. Giordano, MD, says that all Pennsylvania county medical societies have been contacted regarding the purpose and progress of Mercer County's efforts. Specifics about the campaign were included in the correspondence.

SOCIETY'S TRUST ADVOCATES WORKSITE HEALTH PROMOTION

Representatives of the Society's Educational and Scientific Trust served on the administrative, fiscal, and program committees of the second annual Worksite Health Promotion Conference, which drew more than 250 people to Harrisburg in May.

The conference provides employers and business representatives the opportunity to learn about the latest employee health management techniques and health promotion programming, which they can implement back in their offices.

The Trust was instrumental in recruiting the first physician to speak at the conference. Thomas H. Weida, MD, a Lititz family practitioner, spoke on managing workers' compensation care and integrating wellness through effective use of communication strategies and employee education.

EMERGENCY PHYSICIANS WIN REGIONAL AWARDS

Emergency physicians from Pennsylvania made a very strong showing at the Society for Academic

The Delaware County Medical Society (DCMS) recently recognized Camp Sunshine by presenting the 1995 Benjamin Rush Award for Outstanding Community Service to the Delaware County Children's Camp Association, Inc. DCMS President C. Richard Schatt, MD (right), presented the award to Richard Garrett (left), Camp Sunshine executive director. DCMS has long been affiliated with the camp program, now in its sixty-first summer of providing an overnight camping experience for underprivileged children throughout Delaware County. The county society each year asks local physicians to assist in Sunday afternoon "check-in" sessions during the seven-week program.

U.S. Healthcare's Area Medical Director, Philip L. Benditt, MD (center), and Regional Medical Director Jay A. Krakovitz, MD (right), addressed more than 70 physicians at a general membership meeting of the Delaware County Medical Society (DCMS) in May. Drs. Benditt and Krakovitz spoke on the future of managed health care in the Delaware Valley. DCMS Past President Bruce G. Silver, MD (left), served as program chairman.

Emergency Medicine annual meeting in San Antonio, Texas, in May.

In the regional Case Presentation Competition, Pennsylvania physicians won three of 10 awards. Robert Porter, MD, of Albert Einstein Medical Center, Philadelphia, won best discussant in the eastern region; Jim Holliman, MD, of Penn State's College of Medicine, Hershey, won best discussant for the southern region; and Michael Henry, MD, of Geisinger Medical Center, Danville, won best presenter for the eastern region. Richard Wuez, MD, of Penn State's College of Medicine, won second place in the EMS photography contest.

These physicians will compete again in the national finals at the American College of Emergency Physicians meeting in September.

Pennsylvanians presented 62 of the 394 oral and poster abstract presentations at the May meeting.

ALLIANCE CONTRIBUTES TO OKLAHOMA CITY YWCA

The Pennsylvania Medical Society Alliance, through its Emergency Assistance Fund, has donated \$1,000 to aid the Oklahoma City YWCA, located directly across the street from the federal building bombed by terrorists this spring.

Many children at the YWCA were victims of the bombing and

sustained injuries from the disaster. An Oklahoma Medical Society Alliance member serves on the YWCA's board. A portion of the donation will also be presented to the local Kiwanis Club to assist with financial needs of children whose parents were killed in the bombing.

AMA ALLIANCE OFFERING ANTI-VIOLENCE PROGRAM KIT

The American Medical Association Alliance has published a program kit for its nationwide anti-violence initiative, SAVE: Stop America's Violence Everywhere.

The 52-page packet details the steps for planning, implementing, and publicizing an anti-violence event—anything from printing hotline cards and getting a mayoral proclamation signed, to a candlelight vigil for victims of violence.

The centerpiece of the initiative—launched in 1991—is SAVE Today, an event to be held annually on the second Wednesday of October, beginning October 11, 1995. County and state medical alliances are encouraged to participate on a grassroots level.

Also, the AMA Alliance will hold a SAVE Today rally on Monday, October 9, during its Leadership Confluence in Chicago.

For more information about SAVE, or to receive a SAVE program kit, contact the AMA

Alliance at 515 N. State St., Chicago, IL 60610; or call (312) 464-4470.

HCFA SEEKING HELP WITH MAMMOGRAPHY CAMPAIGN

The Health Care Financing Administration (HCFA) is seeking physicians' help with its nationwide public information campaign to promote awareness of Medicare's mammography benefit. The campaign encourages women to seek a screening mammography for early detection of breast cancer.

Although Medicare has been paying for screening mammographies since 1991, only 37 percent of eligible older women used the benefit, leaving more than 10 million Medicare beneficiaries age 65 or older unscreened. The U.S. Department of Health and Human Services hopes to increase that percentage to 60 percent by the year 2000.

To learn more about the campaign and how you can help, call:

Patricia Antrobus
HCFA
(215) 596-6865.

GUIDE TO EVALUATING QUALITY OF CARE RELEASED

The Agency for Health Care Policy and Research (AHCPR) in May published a report that provides information on methods for using clinical practice guidelines to evaluate quality of care.

Developed by an 18-member private sector panel of experts, the report shows users how to translate AHCPR-supported clinical practice guidelines into medical review criteria, performance measures, and standards of quality to measure and evaluate the degree to which guideline recommendations are being implemented.

"American health care is entering a new era of accountability for the quality and value of the services it delivers," says AHCPR Administrator Clifton R. Gaus, ScD. "This blueprint will help physicians who use AHCPR-supported clinical practice guidelines to improve the quality of care they provide."

Dr. Gaus said the report is part of a series of steps AHCPR is taking to develop science-based means for →

accurately measuring quality of care.

AHCPR is disseminating the report widely to physician organizations, managed care organizations, health care systems, other providers, and utilization review organizations. Copies are available free of charge by requesting AHCPR publication numbers 95-0045 and 95-0046, "Using Clinical Practice Guidelines to Evaluate Quality of Care, Volumes I and II." Call AHCPR at (800) 358-9295.

TV SPOT URGES PARENTS TO IMMUNIZE CHILDREN

A television public service announcement (PSA) urging parents to immunize children is now available from the American Medical Association. The PSA provides viewers with an 800 number to call to obtain free information regarding immunization and recommended immunization schedules from the AMA and the American Academy of Pediatrics (AAP).

The PSA emphasizes the importance of routine childhood diseases, including polio, measles, mumps, and chicken pox, and encourages parents to call their physicians to schedule routine immunizations for children. The AAP points out that only 66 percent of America's children have received the recommended doses of immunizations—a level far below that of many other countries.

To request copies of the PSA, fax your name, address, and phone and fax numbers to Barry Cohn at the AMA at (312) 464-5839. Also indicate which television station you will contact, as well as the size tape you need (3/4 inch or one inch).

A packet of information on immunizations is also available by calling (312) 464-4579.

PMSLIC OFFERS HOME-STUDY COURSE FOR 1996 DISCOUNT

Beginning this month, the Pennsylvania Medical Society Liability Insurance Company (PMSLIC) is offering a new home-study program, "Issues in Managed Care," which will present risk-management strategies for the managed care setting. Physicians who complete the program by the October 13, 1995, deadline will earn a five-percent discount on their 1996 PMSLIC policy premiums, as well as continuing medical education credit.

"Issues in Managed Care" will address topics such as:

- making decisions about participation in a managed care organization,
- what to look for before you sign a contract,
- the roles of gatekeeper and consultant,
- what to do when your medical judgment and a managed care organization's utilization decision don't coincide, and
- how to evaluate practice guidelines.

The course uses case scenarios to illustrate how these issues might arise in everyday practice.

This home-study course has been approved for six hours of continuing medical education credit by the Pennsylvania Medical Society (Category I), the American Osteopathic Association (Category 2-B), the American Academy of Family Physicians (Prescribed Credit), and the American College of Emergency Physicians (ACEP Category I). PMSLIC will mail each physician who completes the program a certificate verifying credit earned.

The registration fees are: \$95 for PMSLIC insureds, \$125 for Society members who are not insured by PMSLIC, and \$150 for nonmembers. Physicians may order using MasterCard, VISA, or check.

A \$300 minimum and \$1,000 maximum for an annual policy apply to the discount program. Note: All PMSLIC policies are subject to \$200 premium minimum and will not be discounted below this level.

Physicians not currently insured by PMSLIC who complete the course by the October deadline will receive a coupon that can be redeemed for the same discount if they obtain professional liability insurance from PMSLIC in 1996.

For additional information on this discount program, call PMSLIC's Risk Management Department at (800) 445-1212 or (717) 558-7500.

Mrs. Persic

Elfrieda (Freddie) M. Persic, president of the Pennsylvania Medical Society Alliance, has won a Republican seat as a council member, College Township, State College. This is Mrs. Persic's first elected position.

The Pennsylvania Osteopathic Medical Association has installed **Arnold Sokol, DO**, Norristown, as its 80th president. The following were elected officers of the House of Delegates: **Kieren P. Knapp, DO**, Jacobus, president elect; **John W. Becher Jr., DO**, Newtown Square, vice president; **William A. Wewer, DO**, Steelton, secretary/treasurer; **Hymen Kanoff, DO**, Philadelphia, speaker of the house; and **Toni Maria Casale, DO**, Camp Hill, vice speaker.

Three researchers at Jefferson Medical College of Thomas Jefferson University—**Jewell Osterholm, MD**, professor of neurosurgery; **Rodney D. Bell, MD**, director, Jefferson's Stroke Unit; and **Glenn Frazer, PhD**, director, Neurosurgical Stroke Project—have developed Oxygenated Fluorocarbon Nutrient Emulsion (OFNE). This patented system to

deliver a new drug throughout the brain several hours after a major stroke shows in pre-clinical testing that the brain can be resuscitated. The researchers are completing final testing required by the FDA before beginning clinical trials.

Gilbert A. Friday Jr., MD, professor of pediatrics, University of Pittsburgh School of Medicine, and chief of clinical services for the Asthma and Allergic Disease Center, Children's Hospital, Pittsburgh, was reelected chairman of the board and corporate member, Pennsylvania Blue Shield.

Helen F. Krause, MD, was elected to a five-year term to the committee of revision and board of trustees of the United States Pharmacopeial. Dr. Krause will serve as an expert adviser in the area of otorhinolaryngology.

John C. Sonne, MD (Philadelphia County), has authored a paper entitled, "The Relevance of the Dread of Being Aborted to Models of Therapy and Models of the Mind, Part I: Case Examples," which was published in the *Pre- and Perinatal Psychology Journal*, Volume 9, No. 3, Spring 1995. Dr. Sonne also presented a paper, "Interpreting the Dread of Being Aborted in Therapy," at the XI International Conference of the International Association for Prenatal and Perinatal Psychology and Medicine, Heidelberg, Germany.

Alexander Minno, MD, Pittsburgh, was awarded the Volunteer of the Year Award (1994-95) and was selected as the first director emeritus to serve for life by the University of Pittsburgh Alumni Association.

Thomas A. Gennarelli, MD, Bryn Mawr, was appointed professor and chair, Department of Neurosurgery, and director, Center for Neuroscience, Medical College of Pennsylvania and Hahnemann University, Philadelphia.

Dr. Kroser

Lila Stein Kroser, MD, clinical assistant professor, Medical College of Pennsylvania, Philadelphia, was elected president elect of the Medical Women's International Association, the

multi-national organization of 30,000 women physicians from 46 countries. Dr. Kroser will be inaugurated as president at the XXIV Congress to be held in Nairobi, Kenya, in 1998.

Lebanon's Good Samaritan Hospital paid tribute to the following four senior members of the active medical staff to mark Doctor's Day in March: **Suzanne H. Worrilow, MD**, family practitioner, treasurer, medical staff; **Afrodio N. Nucum, MD**, surgeon; **R. William Alexander, MD**, radiologist; and **Horst N. Bertram**, radiologist.

Harry D. Propst, MD, chief of staff, Wayne Memorial Hospital, Honesdale, received the 1995 Citizenship Citation Award from the Wayne/Pike Lodge of B'nai B'rith. Dr. Propst is secretary/treasurer of the Wayne-Pike County Medical Society.

John F. Weldon, MD, Monongahela, was awarded the Sickman-Levin Award for Dimensions in Medicine at Monongahela Valley Hospital. The award recognizes outstanding accomplishments and dedication to the hospital and the health care system at large.

Salil Shinde, MD, Willow Grove, was appointed medical administrator, Philadelphia Geriatric Center.

Mayor Edward G. Rendell proclaimed "Jefferson Medical College Alumni Association 125th Anniversary Day" for the city of Philadelphia. The proclamation cited the alumni association's importance to Philadelphia and its steady growth since its founding in 1870 by Samuel D. Gross, MD. Declaring Jefferson "a major presence in the heart of Philadelphia," the proclamation recognized Jefferson Medical College alumni as having "played a major part in establishing this city as one of the world's leading centers for medicine." Pictured from left to right are: **Barbara G. Frieman, MD**; **Edward H. McGehee, MD**; Mayor Rendell; **Burton L. Wellenbach, MD**; and **William V. Harrer, MD**.

PHYSICIANS WANTED

Western Pennsylvania—Board certified or prepared emergency physicians needed for staffing a community hospital emergency department near the Ohio/Pennsylvania border. Please send CV to P.O. Box 91666, Cleveland, OH 44101.

Pennsylvania—Physician group seeks full-time and part-time physicians for an emergency department of community hospitals in central and western Pennsylvania. Please send resume to P.O. Box 91666, Cleveland, OH 44101.

Pittsburgh, Pennsylvania—Penn Group Medical Association (PGMA), a 100-physician multi-specialty group practice affiliated with the largest HMO in Pittsburgh, is seeking BE/BC physicians in: family practice, internal medicine, pediatrics, ob/gyn, and psychiatry. We are formally affiliated with major teaching hospitals and leading community hospitals in Pittsburgh. PGMA serves eight ambulatory care centers, all conveniently located near cultural, educational, recreational, and corporate activities. Excellent salary and fringe benefits. For confidential consideration contact: Angela Lascola, HealthAmerica, 5 Gateway Center, Pittsburgh, PA 15222, or call collect (412) 553-7502.

Emergency Physicians—Emergency Physician Associates is seeking quality ED physicians for a variety of practice opportunities. Director and staff positions are available. EPA contracts with hospitals in NJ, PA, MD, and NC for the provision of emergency medicine, urgent care and industrial/occupational health services. Our client hospitals are located in rural to urban areas with patient volumes ranging from 10,000 to 75,000. At EPA we offer physicians competitive compensation, flexible schedules and shifts, occurrence-based malpractice insurance, a variety of practice settings to choose from, cooperative working environments, and supportive medical directors and corporate staff. Interested candidates may contact EPA at (800) 848-EPA-1.

Part-time position available evening or weekends, modern urgent care center, N.E. Phila. suburb. Excellent opportunity for resident or practitioner seeking to supplement income. Contact Dr. Miller (215) 638-0666.

BC/BE Family Practice needed to join busy, growing semi-rural private practice with two physicians and two nurse practitioners in beautiful South Central Pennsylvania. Hospital rounds, office hours, and sharing of on-call required. No obstetrics. Submit letter/resume to Clark C. Dunkle, III, CPA, 15 State Avenue, Suite 201, Carlisle, PA 17013.

Northwestern Pennsylvania—Busy practice in rural setting is seeking to expand its current medical staff of primarily internal medicine with a growing interest in occupational medicine. We offer personal and professional fulfillment through generous salary,

reasonable call schedule, excellent benefits, and a potential for partnership. All of this in a beautiful friendly community only 1 1/2 hours from Pittsburgh. Contact: Stephen C. Cenedella, MD, 150 Prospect Ave., Franklin, PA 16323, (814) 432-5464.

New Openings Daily! FP, IM (general), PEDS, OB, UC—Call now for details on Allentown, Lancaster, York, Cincinnati, Boston, Kansas City, Houston, St. Louis, Indianapolis, Columbus, Richmond, Rochester, Syracuse, Tampa, Miami, Cleveland, Detroit, Milwaukee, Chicago, Buffalo, plus over 2,000 rural communities. We track every community in the country. The Curare Group, Inc. (800) 880-2028.

Internal Medicine Practice looking for General Internist to work full or part-time in Fountainville, PA. Affiliated with Doylestown Hospital. Please call (215) 230-8390.

Dermatology Practice looking for Dermatologist to work full or part-time in Fountainville, PA. Affiliated with Doylestown Hospital. Please call (215) 230-8390.

Locum Tenens opportunities available immediately in Pennsylvania and throughout the nation. All positions offer premium compensation, paid travel expenses, and occurrence malpractice insurance. Experience the personal touch that separates MDA from the rest. Call Curtis Shumard at (800) 780-3500 ext. 336.

BE/BC Internal Medicine to join solo practice in Berks County. Balanced office, hospital and nursing home practice. Send CV to Box 407, PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

Ideal Location—Growing, well-established, group practice in beautiful New Cumberland, PA, is seeking board eligible or board certified family practice physician/resident. Guaranteed salary, paid malpractice insurance, continuing education assistance, vacation time, health care package. Options include nursing home practice, hospital newborn care. Please send curriculum vitae to: Box 410, PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8200, Harrisburg, PA 17105-8820.

OB/GYN/Family Practice/Internal Medicine—Ithaca, Elmira/Corning, Binghamton and other sites. 240-physician run group has several exceptional practice opportunities throughout the lovely southern tier of NY and northern tier of PA. Exceptional compensation and benefits, state-of-the-art practice. Family environment, and unlimited year-round recreational activities. Contact Jim Cavnar: 1-800-678-7858. Fax CV: (314) 726-0026.

Dubois, PA—Regional cancer center affiliated with the Pittsburgh Cancer Institute is seeking an additional medical oncologist. Leader in clinical trial enrollment, computerized tumor registry, full ancillary support. Na-

tionally competitive compensation for the ideal candidate who will be BE/BC, team player with strong leadership potential, to join this rapidly expanding program. Confidential replies to Christine Mackey-Ross at Witt/Kieffer, Ford, Hadelman & Lloyd, 2015 Spring Road, Suite 510. Oak Brook, IL 60521. Phone (708) 990-1370. Fax (708) 990-1382.

Primary Care Physician Needed—Multidisciplinary Rehabilitation Center is seeking a Primary Care Physician (board certified in family medicine and/or internal medicine) in the Harrisburg, PA area. Experience in occupational and rehabilitative medicine helpful, but not required. The position is full time. Please send resume and salary requirements to P.O. Box 284, Middletown, PA 17057.

New Opportunity! IM and FP—Pittsburgh. Secure, well-established group. Four locations. One designated HPSA, excellent salary, bonus and benefits. Call Melissa McMurray at (800) 765-3055.

Michigan, Wisconsin, Iowa, Minnesota—Progressive and growing group practices, including major multispecialty groups, staff model HMOs, traditional primary care clinics and an integrated health system seek additional physicians. Choose from a variety of desirable metropolitan and suburban cities, college and resort towns, and rural destinations. This month, opportunities available for physicians specializing in Family Practice, Urgent Care, Internal Medicine, Pediatrics, Neurological Surgery, Hematology/Oncology, and Nephrology. Call (800) 243-4353 or write to Strelcheck & Associates, 10624 North Port Washington Road, Mequon, WI 53092.

ASSISTANT PROGRAM DIRECTORS OR INSTRUCTORS

Test your talents, challenge your limitations and provide high-level leadership as an Assistant Program Director or Instructor for Frankford Hospital's Transitional Year Residency Program. Affiliated with The Medical College of Pennsylvania (M.C.P.), our Department of Medical Education is seeking a full-time Assistant Program Director and part-time faculty members.

The selected individuals will help direct full or part-time faculty members in the Department of Medical Education (concurrent academic appointments are available through M.C.P.). Your varied responsibilities will include conducting daily attending rounds on floor/ICU services, supervising emergency inpatient care, scheduling/lecturing at conferences and handling program administration. Board certification in Internal Medicine required; subspecialty experience helpful.

We offer highly competitive compensation and benefits (medical/dental/life/disability/professional liability insurance, C.M.E stipend, an on-site wellness center, exclusive day care and more). Please contact: Mr. Gary Burmylo, Frankford Hospital, Frankford Ave. & Wakeling St., Phila., PA 19124. (215) 831-2382, FAX (215) 831-2282. EOE M/F/D/V.

**FRANKFORD
HOSPITAL**

Do you know someone who needs nursing care in their home?

*We have a special person to take care of
your special person.*

Are your patients entitled and/or eligible for Medicare benefits? If you are not sure call **MEDICAL PERSONNEL POOL** and we will help you get the answer. Bear in mind that a person need not be a Social Security recipient or over 65 to receive Medicare services. People who are disabled for 2 years or more are eligible as are people who are in dialysis for 6 months or longer. **MEDICAL PERSONNEL POOL** provides a full range of **HOME HEALTH SERVICES**, as well as private duty nursing. We provide most of these services in the home as well as in the hospital and nursing home.

New PMSLIC Subsidiary Up and Running

Mark T. Kocis

The Pennsylvania Medical Society Liability Insurance Company in early March formed a new, wholly owned subsidiary—Infinity Management Services, Inc.—to provide management services to support the changing needs of the health care and liability insurance industries. Immediately after incorporation, Infinity landed a major client contract with the Pennsylvania Physician Healthcare Plan, Inc.

The Pennsylvania Physician Healthcare Plan, Inc. (PPHP) was formed in August 1994 by a group of practicing Pennsylvania physicians to create a statewide, physician-owned and physician-controlled managed care organization. To date, PPHP has completed a feasibility study, which demonstrated significant physician support for the concept. Currently, PPHP is working to acquire enough capital prior to applying for a Certificate of Authority to operate as an HMO and/or PPO in the commonwealth. Infinity Management Services, Inc., the new subsidiary of the Pennsylvania Medical Society Liability Insurance Company (PMSLIC), has been retained by PPHP to provide project management and administrative services throughout this capitalization phase.

"Our relationship with PPHP is a perfect match, and the timing could not have been better," says Sarah Lawhorne, JD, president and chief operating officer of PMSLIC and chief executive officer of Infinity. "On the one hand, PPHP was seeking support and assistance from an organization that has the skills and resources required to help manage a large, complex business project at an affordable price. Infinity was simultaneously looking to break into the market and establish an image as a premier business services organization, supporting changing health care and insurance markets. We view Infinity's involvement with PPHP as another way for the State Society family to demonstrate active support for physicians in their time of need."

From PPHP's perspective, there were additional benefits to contracting with Infinity. Gary Brown, MD, chairman and president of PPHP, recounts, "We really wanted to partner with a Pennsylvania-based organization, preferably one with connections to the Pennsylvania Medical Society. Infinity can not only tap into the insurance resources at PMSLIC, but also the statewide physician contact network of the Society and the managed care expertise of the PennMed Member Services Company (PMSCO). Infinity is truly delivering value-added services. Its performance to date has exceeded the board's expectations by far."

Dr. Brown adds, "PMSLIC has also been invaluable in providing PPHP with a significant line of credit to help us make it financially through this critical capitalization peri-

od." PMSLIC has extended a loan agreement to PPHP to assist in meeting its interim debts until capitalized.

Beyond PPHP—Infinity's future

Infinity will by no means be a one-client company. Plans are already under way to greatly expand and enhance PMSLIC's risk management products and services through a new Infinity division called RiskCare.

Over the years, PMSLIC's Risk Management Department, under the direction of Vice President Judith R. Brown, JD, RN, has been acclaimed by its insureds to be of the highest quality and value. Independent surveys have found PMSLIC's risk management program to be among the finest in the state.

RiskCare will seek to build upon the rich tradition of PMSLIC's risk management program while creating innovative new products and services to support the risk management needs of a wide range of health care professionals and organizations. "Through RiskCare we expect to offer a wider spectrum of risk management products and services to physicians and other health care customers," says Mark Lelinski, chief operating officer of Infinity. "For example, we are exploring new avenues for offering our educational programs, such as using technology to deliver CME courses on demand."

Infinity has not yet finalized its business plan. Additionally, health care and insurance product and service lines are under consideration at this time.

Relationship with Society affiliates

Infinity is actively working with the State Society and its subsidiaries, most notably PMSCO and the Keystone Peer Review Organization (KePRO), on several joint projects. And while the potential for overlap between products and services offered by Infinity and those of other Society affiliates exists, strong communication and a commitment to the State Society family assure that we will be working as one.

"Our goal is to fill a need for products and services not currently available from other sources within the State Society family," says Lawhorne. "As a group, the Society and its subsidiaries are striving to offer a full range of physician and health care delivery system services."

She concludes, "We would like to be able to offer physicians simple, one-stop shopping for services they will need to help them survive in the ever-changing health care environment. We're confident Infinity is an innovative step in that direction." ☐

Mr. Kocis is operations manager, Infinity Management Services, Inc., Harrisburg.

\$24,350,591

To date, Pennsylvania physicians have received almost \$24 million as a result of a Pennsylvania Medical Society victory challenging Medicaid payment practices.

“Successes like this...offer persuasive, tangible evidence of the important role which the Medical Society plays on behalf of all physicians.”

—Michael J. Vergare, MD
Immediate Past President,
Pennsylvania Psychiatric Society

“I’m extremely proud of the Pennsylvania Medical Society’s persistence in acquiring this gain for commonwealth physicians.”

—Jeffrey H. Chaby, DO
President, Lancaster City and
County Medical Society

As a result of *Pennsylvania Medical Society et al. v. Snider et al.*, the Pennsylvania Department of Public Welfare (DPW) must pay both full coinsurance and deductibles for low-income elderly who are eligible for both Medicare and Medicaid (dual eligibles), retroactive to September 1994.

DPW has implemented—with significant Society input—a system to automatically process claims involving dual eligibles. In most cases, physicians need do nothing to receive the higher payments. In fact, physicians need not participate in the Medical Assistance program to receive the new payments.

The graph above shows the cumulation of payments made by press time to physicians as a result of the Society's victory.

One more example of caring physicians working for you!

POWERFUL PARTNERSHIPS.

Stability, strength
and synergy
stand the test of time.

Almost twenty years ago,
such a foundation was laid
by medical professionals
to build protection through your own
medical liability insurance company.

With your support, we have grown
to become the insurance carrier
of choice for physicians and surgeons,
as well as their hospitals,
throughout New Jersey and Pennsylvania.

Today, change is everywhere, and stability,
strength and synergy have never been so valuable.

But they are not enough.
To succeed today, you need the added power
of new insurance products, financial services,
and consulting services.

MIIX has broadened its foundation and
introduced these membership enhancements
to help you meet the challenge of change.

Call us for more details: 1-800-234-MIIX.

We develop powerful partnerships.

“This is unbelievable.

Thirty minutes into our first meeting, it was obvious who was running the show, and he wasn't a doctor. He had

an agenda that wasn't anything close to mine. Sure, when they sold me the medical liability policy, they bragged about having physicians on their board. They told me to expect a fair review by my peers if there was ever a problem. Then came the malpractice suit. I'm really afraid I might lose this one, and not because of a bad medical decision. I wish now that I had protected my reputation and signed with PMSLIC. PMSLIC is doctor owned, doctor run. With PMSLIC, any claims brought against me would have been reviewed by physicians like me — physicians with a vested interest in the reputation of the

medical community — a reputation we all need to maintain, even safeguard. That would have made all the difference in the world to me. Because now, I'm really scared.”

Now There's A Cure For Your Office Headaches!

Introducing the *Medical Mastermind* ...
the practice management software
that's just what the doctor ordered.

Medical Mastermind is the
one office automation package
that can make your office more
efficient...maximize cash flow...
increase productivity...and enhance
your bottom line. That's because
there are 101 indispensable features
available for your practice to utilize.

**Installation and training is
never a problem for you.**

Software Unlimited takes care of
everything...including refresher
and follow-up support.

You and your staff will soon be
operating like pros even if you have
no prior computer experience.

What's more, with continual
updates from Software Unlimited,
your program will never go out of
date. You'll always be in compliance
with the latest regulations and
insurance requirements. **And our
software package will satisfy your
needs as your practice grows - just ask
any of our existing clients.**

To learn more about the Medical
Mastermind, just call the office closest
to you. All of our locations are listed below...

Pennsylvania Medical Society members are slashing their premium costs with Dodson's Dividend Plan for workers' compensation insurance.

A total of more than \$3.4 MILLION in dividends has been paid to insured members since 1973.

Excellent Savings Potential

- 5% discount on premium rates when policies are issued
 - Yearly dividend opportunities
- A dividend has been returned to insured members **every year** for 21 years.*
- Dividend paid in 1994 —
\$257,678.57
 - Dividends paid (since 1973) —
\$3,675,320

*State laws prohibit insurance companies from guaranteeing future dividends.

Interest-free Premium Payment Plan

Flexible premium payment options are yours with Dodson Group. Your premiums may be paid in convenient installments — **all with no interest fees or service charges.**

The Dodson Dividend Plan is the only workers' compensation insurance program endorsed by the Pennsylvania Medical Society.

Outstanding Personal Service

Claims are handled locally by competent adjusters carefully selected for their expertise and ability to serve our policyholders.

- Upon settlement, most claim payments are in the mail within 48 hours.

Our professional home office and field staffs are ready to assist you in person or by phone.

Call: 1-800-825-9489

FAX: 1-800-825-6035

A Century of Experience

Dodson Group insured its first customer in 1900 and our first Pennsylvania Medical Society member in 1973. We can put that experience to work for you.

Call Dodson Group today for more information or a no-obligation premium quote . . .

PHILADELPHIA HEART INSTITUTE

at Presbyterian Medical Center

Cardiology Update

is designed for the physician and provides an intensive survey of the current status of clinical cardiology, allowing application of this new knowledge and technology to the diagnosis and treatment of patients.

Wednesday, September 6, 1995 3:30-5:30 PM

Office Cardiology: Bedside Diagnosis of the Cardiac Patient-Part I

**Moderator: Michael S. Feldman, M.D.
Bernard L. Segal, M.D.**

Patients will be presented with interesting clinical findings. Carotid and jugular venous pulsation will be analyzed. The precordium will be palpated to determine abnormal impulses. Heart sounds and murmurs will be interpreted in light of the patient's symptoms and the clinical findings. Stethophones will be available at each seat so that the audience will be able to hear and interpret these findings. Appropriate echocardiograms will be shown.

■ **CME Credits***

■ **Call for Free Reservation (215) 662-8627**

**Scheie Auditorium
Presbyterian Medical Center
39th & Market Streets
Philadelphia, Pennsylvania 19104**

* Presbyterian Medical Center designates this continued medical education activity for 2 credit hours in Category I or the Physicians' Recognition Award of the American Medical Association and the Pennsylvania Medical Society Membership requirement. Nine sessions, 18 credits.

Presbyterian Medical Center of the University of Pennsylvania Health System is accredited by the Pennsylvania Medical Society to sponsor continuing medical education for physicians.

All faculty participating in continuing medical education programs sponsored by Presbyterian Medical Center are expected to disclose to the program audience any real or apparent conflict(s) of interest related to the content of their presentation(s).

America's Managed Care Partner

**WHEREVER WE SHOW UP,
RATES GO DOWN.**

Whenever we come into a state, good sense comes along, nonsense exits. Stability returns to the medical liability insurance market. In nine states 18,000 of our member-insured doctors have been enjoying the new cost climate. Protected by one of the largest medical professional liability monoline insurance companies in America. And defended by a firm of medically savvy litigators who close almost 80% of cases without payment.

And, year in and out, win 90% of cases that go to trial.

For information, call 1-800-228-2335.

Responsive approaches to demanding new challenges in liability protection.

Physicians. Surgeons. Dentists. Oral Surgeons. Hospitals. Clinics. Managed Care.

Why Do 60,000 Doctors Trust Us With Their Professional Reputations?

In an era of "not if, but when" a doctor will be accused of malpractice, your choice of professional liability coverage is extremely important. We know that *any* allegation can be devastating to both your professional reputation and your personal assets... making the company you choose critical to your future well-being. Many factors should be taken into account when making a decision.

Consider our financial strength and stability. We are rated A+ (Superior) by A.M. Best and AA (Excellent) by Standard & Poor's. No other company with an exclusive focus on the needs of the health care community has higher financial ratings.

Look at our experience. For nearly a century we have specialized in defending and protecting doctors. No other company has **successfully defended** more than 180,000 malpractice claims.

Local service is important, too. Our General Agents and Field Claim Managers work with you on every allegation. They average more than 15 years experience working with doctors and the legal system.

Why do more than 60,000 doctors trust their professional reputation and personal assets with us? No other company combines nearly a century of experience with financial strength and the local service provided by The Medical Protective Company.

The 1995 annual meeting of the House of Delegates of the Pennsylvania Medical Society will be called to order at the Hershey Lodge and Convention Center, Hershey, Pennsylvania, on Friday, October 27, at 10:00 a.m. The second session of the House is scheduled for Saturday, October 28, at 1:00 p.m., and the concluding session is Sunday, October 29, at 9:30 a.m.

ELECTIONS

In accordance with Chapter XII, Section 1 of the Bylaws of the Pennsylvania Medical Society, the following nominations and/or elections will be in order. Nominations for AMA delegates will be in order at the first session on Friday morning, October 27, 1995. Nominations for all other offices will be in order at the second session, Saturday afternoon, October 28, 1995, and elections will occur on Sunday morning, October 29, 1995. General officers to be elected are a vice president, a speaker of the House of Delegates, and a vice speaker of the House of Delegates.

In accordance with Chapter XIV, Section 5 of the Bylaws, elections will be in order for a trustee for the First District to succeed George R. Fisher III, MD, Philadelphia County, who is eligible for reelection; a trustee for the Third District to succeed John J. McAndrew, MD, Lackawanna County, who is eligible for reelection; a trustee for the Eighth District to succeed Robert L. Lasher, MD, Erie County, who is eligible for reelection; a trustee for the Ninth District to succeed John W. Mills, MD, Indiana County, who is eligible for reelection; a trustee for the Thirteenth District to succeed Carol E. Rose, MD, Allegheny County, who is eligible for reelection; a trustee for the Hospital Medical Staff Section to succeed Lee H. McCormick, MD, who is ineligible for reelection; a trustee for the Resident Physician Section to succeed Joyann A. Kroser, MD, who is eligible for reelection; a trustee for the Young Physicians Section to succeed Robert M. McNamara, MD, who is eligible for reelection; and a trustee for the Medical Student Section to succeed Stacy L. Krisher, who is eligible for reelection.

In accordance with Chapter X, Section 1 of the Bylaws, elections for delegates and alternate delegates to the American Medical Association are in order. In accordance with Standing

Rule Number 10 (adopted October 22, 1982; amended October 21, 1994), elections for delegates will be held on Saturday morning, October 28, 1995, and elections for alternate delegates will be held on Sunday morning, October 29, 1995.

Delegates whose terms expire December 31, 1995, are:

1. Donald C. Brown, MD (Westmoreland County)
2. Ronald J. Clearfield, MD (Westmoreland County)
3. James L. Cristol, MD (Philadelphia County)
4. Donald G. Ferguson, MD (Allegheny County)
5. George R. Fisher III, MD (Philadelphia County)
6. Robert L. Lasher, MD (Erie County)
7. William H. Mahood, MD (Montgomery County)
8. Robert N. Moyers, MD (Crawford County)
9. Lewis T. Patterson, MD (Dauphin County)
10. Michael J. Prendergast, MD (York County)
11. Robert D. Reinecke, MD (Philadelphia County)
12. Jonathan E. Rhoads Jr., MD (York County)

The Committee to Nominate Delegates and Alternate Delegates to the American Medical Association makes the following nominations for 12 delegates for two years commencing January 1, 1996, and expiring December 31, 1997:

1. Donald C. Brown, MD (Westmoreland County)
2. Ronald J. Clearfield, MD (Westmoreland County)
3. David L. Cohen, MD (York County)
4. James L. Cristol, MD (Philadelphia County)
5. Donald G. Ferguson, MD (Allegheny County)
6. George R. Fisher III, MD (Philadelphia County)
7. Robert L. Lasher, MD (Erie County)
8. William H. Mahood, MD (Montgomery County)
9. Robert N. Moyers, MD (Crawford County)
10. Lewis T. Patterson, MD (Dauphin County)
11. Michael J. Prendergast, MD (York County)
12. Robert D. Reinecke, MD (Philadelphia County)

13. Jonathan E. Rhoads Jr., MD (York County)

Alternate delegates whose terms expire December 31, 1995, are:

1. Richard T. Bell, MD (Berks County)
2. David L. Cohen, MD (York County)
3. William S. Frankl, MD (Philadelphia County)
4. Mary J. Hudak, MD (York County)
5. William W. Lander, MD (Montgomery County)
6. John D. Lane, MD (Bucks County)
7. John W. Lehman, MD (Beaver County)
8. James G. Pitcavage, MD (Allegheny County)
9. Carol E. Rose, MD (Allegheny County)
10. Kimberly W. Schlesinger (Allegheny County—slotted medical student position)
11. Stephen L. Schwartz, MD (Philadelphia County)
12. Jennifer E. Trotman, MD (Montgomery County—slotted resident physician position)
13. Vacancy

The Committee to Nominate Delegates and Alternate Delegates to the American Medical Association makes the following nominations for 11 alternate delegates for two years commencing January 1, 1996, and expiring December 31, 1997, and one alternate delegate for one year commencing January 1, 1996, and expiring December 31, 1996:

1. Sucha O. Asbell, MD (Philadelphia County)
2. Richard T. Bell, MD (Berks County)
3. Marc S. Berger, MD (Berks County)
4. Raphael J. Bonita, MD (Luzerne County)
5. Jeffrey H. Chaby, DO (Lancaster County)
6. Charles Cutler, MD (Montgomery County)
7. William S. Frankl, MD (Philadelphia County)
8. Jay L. Funkhouser, MD (Beaver County)
9. Walter L. Gerber, MD (Philadelphia County)
10. Stuart Gitlow, MD (Allegheny County)
11. Mary J. Hudak, MD (York County)

The **InterGroup** *Advantage*

You win. Your patients win.

InterGroup is the largest Preferred Provider Organization (PPO) serving Pennsylvania and New Jersey for one reason: win-win partnerships between patients and health care providers.

More than 1.2 million plan participants get the advantage of preferred rates and freedom of choice.

Over 130 hospitals and 14,000 physicians and allied professionals get the advantage of higher patient volume and less paperwork.

The Moss Rehabilitation Research Institute presents a 1½ day course on

Rehabilitation Research Methodology

Friday, September 22 and Saturday, September 23, 1995
Albert Einstein Healthcare Campus, Philadelphia, PA

The course is appropriate for residents, attendings, and other clinicians who are beginning to consider the place of research in their careers. Practical and theoretical concepts necessary for an individual program of research are presented, with special attention to research ethics, study design, data analysis, and strategies for obtaining funding for research. The course format moves between didactic lecture presentations and intensive small-group workshops. Registration cost, including meals and breaks, is \$125.

Faculty on staff at MossRehab Hospital and the Moss Rehabilitation Research Institute include:

Alberto Esquinazi, MD *Director, Gait Laboratory*

Gary Goldberg, MD *Director, Electrodiagnostic Laboratory*

Nathaniel Mayer, MD *Director, Drucker Brain Injury Center*

John Melvin, MD *Vice President for Medical Affairs*

Myrna Schwartz, PhD *Director and Investigator, Neuropsychology Laboratory; Associate Director, Research Institute*

Mary Segal, PhD *Investigator, Outcomes Research*

John Whyte, MD, PhD *Director and Investigator, Attention Laboratory; Director, Research Institute*

For more information, contact Len Umile at the Moss Rehabilitation Research Institute, telephone (215) 456-9901 ext. 9169; FAX (215) 456-9514. Space is limited, so early registration is suggested.

(Note: Should the House adopt Subject Four calling for deunification from the AMA, the Society would be entitled to two fewer delegates and alternate delegates.)

The Committee to Nominate Delegates and Alternate Delegates to the American Medical Association makes the following nomination for one slotted position for alternate delegate for a resident physician for a one-year term commencing January 1, 1996, and expiring December 31, 1996:

1. Jennifer E. Trotman, MD
(Montgomery County)

The Committee to Nominate Delegates and Alternate Delegates to the American Medical Association makes the following nomination for one slotted position for alternate delegate for a medical student for a one-year term commencing January 1, 1996, and expiring December 31, 1996:

1. Kimberly W. Schlesinger
(Allegheny County)

Also to be elected will be one member to serve on the Committee to Nominate Delegates and Alternate Delegates to the American Medical Association. The term of Wilma C. Light, MD (Westmoreland County), expires; she is not eligible for reelection.

In accordance with Chapter XVII, Section 2 of the Bylaws, the Board of Trustees nominates the following member for one vacancy on the Judicial Council:

For the office now held by Betty L. Cottle, MD (Blair County), who is eligible for reelection, the Board nominates Betty L. Cottle, MD.

Set forth below is the text of the proposed bylaws revisions. Deletions from existing bylaws are indicated by brackets; additions are italicized.

SUBJECT ONE

GENDER-NEUTRAL LANGUAGE REVISIONS

Set forth below are proposed gender-neutral language revisions.

Chapter I - Membership

Section 3 - Membership

Categories...d. Honorary Member - [A physician] *Physicians* who [is] *are* not [a] residents of Pennsylvania, but [is a] *are* members of [his] *their* own state or territorial medical association, may be elected to this category by the House of Delegates by a three-fourths vote at any annual meeting....

Chapter II - Component Societies

Section 8 - Membership Transfers -

A member in good standing of any component society may transfer to another county society in Pennsylvania upon recommendation by [his] *the original component* society for admission to membership in the component society into whose jurisdiction [he] *the member* moves without the delay attendant upon ordinary applications for membership.

Chapter II - Component Societies

Section 9 - Choice Of Membership -

A physician living near a county line or living in one county and maintaining an office in another county may hold membership in the component society most convenient on permission of the trustee of the district in which [he] *the member* resides. No person may concurrently hold membership in more than one component society, except that a member who has full membership in one county medical society in Pennsylvania may be eligible to hold affiliate membership in any other county medical society in the state.

Chapter XIV - The Board of Trustees

Section 16 - Liability of Board

Members and Officers - A Board member or officer of the Society shall not be personally liable for money damages as such for any action taken or failure to take action as a director or officer unless [his] *the member's or officer's* action constitutes self dealing, willful misconduct or recklessness, or unless liability is imposed pursuant to criminal statute or for payment of taxes. The Board of Trustees may provide for indemnification of Board members and officers to the extent allowed by law.

Chapter XVII - The Judicial Council

Section 7 - Original Jurisdiction -

(a) The Council shall have original jurisdiction in:

(1) all questions involving interpretations of the bylaws of this Society, or the Principles of Medical Ethics, but excluding cases in which a member has been convicted of an offense or committed to an institution under a charge for which [his] the member's medical license may be revoked, and all other controversies involving the discipline of a member unless heard pursuant to subsection (3) below;...

Chapter XVII - The Judicial Council

Section 8 - Appellate Jurisdiction -

...(b) Due Process - When the Judicial Council is required to make a legal determination, such as in an appeal, or determinations with respect to interpretation of bylaws, questions of medical ethics, and resolutions and rules of the Society, the following shall apply: [the] members [has] *have* the right to be represented by an attorney or by any other person of [his] *their* choice; [the] members may present any matter pertinent to [his] *their* defense....

Chapter XVIII - Disciplinary

Bodies/Proceedings and Appeals

Section 2 - General Rules -

a. Conflict of Interest - Any member of the Judicial Council or the district board of censors who is in economic competition with the member against whom charges have been brought, or has any other conflict of interest, shall [disqualify himself] *be disqualified* from participation in that particular case....

Chapter XVIII - Disciplinary

Bodies/Proceedings and Appeals

Section 6 - Effective Date of

Decisions of Component Societies,

District Boards of Censors and the

Judicial Council - ...All decisions of

the Judicial Council, whether in original proceedings or on appeals, shall become final upon the issuance thereof, except that any such decision involving a member of the American Medical Association shall not become effective until 30 days after the decision of the Judicial Council, and, if the member or the component society, if any, has given written notice to the Council on Ethical and Judicial Affairs of the American Medical Association during said 30-day period of [his or its intention] *an* →

Einstein Heart Center

These are just a few examples of the many advances Albert Einstein Heart Center physicians have made over the years in the diagnosis and treatment of heart disease.

- 1981** One of the first in Philadelphia to offer balloon angioplasty as an alternative to bypass surgery.
- 1982** One of the first in Philadelphia to test and offer first generational dual chamber pacemakers.
- 1987** One of the first to expand the use of the bypass surgery technique using the internal mammary artery.
- 1989** One of the first to use computerized, multi-site epicardial and endocardial mapping in the operative treatment of ventricular tachycardia.
- 1991** One of the first in the country to test and use the pacemaker cardioverter defibrillator, or PCD, for tiered defibrillation.
- 1992** One of the first in the country to offer intravascular ultrasound for diagnosing coronary artery disease.
- 1993** One of the first in the region to use the Rotablator® rotational atherectomy device to clear blocked coronary arteries.
- 1993** By launching the Women's Heart Program, the first in the region with a program dedicated to the prevention, detection and treatment of heart disease in women.
- 1994** One of the first in Philadelphia to offer the TEC® extraction atherectomy device for safe removal of blood clots and friable materials from old bypass grafts.
- 1995** Now we offer the Maze procedure for correcting atrial arrhythmias not responsive to drug therapy.

To discuss additional areas of clinical expertise with an Einstein Heart Center physician, please call 1-800-EINSTEIN.

intent to appeal to that body and furnishes a copy of such notice to the Judicial Council of this Society, and, in the case of a member, to the secretary of [his] *the member's* component society, until the expiration of the appeal period and the final disposition by the Council on Ethical and Judicial Affairs of the American Medical Association.

Chapter XVIII - Disciplinary Bodies/Proceedings and Appeals Section 8 - Automatic Suspension -

...The county board of censors shall make due inquiry. If it finds that such member has, in fact, been so convicted, the county board of censors shall order a certified copy of the conviction from the court and upon receipt thereof shall file said copy with the member's records. The county board of censors shall thereupon notify the member that [he] *such member* will stand suspended from membership for an indefinite period, beginning 90 days following [his] *the member's* conviction by the court, or ten days following the notice if such notice is issued more than 90 days after the conviction, unless prior to the effective date of the suspension, the member certifies to the county board of censors that [he has filed] an appeal from the conviction *has been filed*.

If the member so convicted has so appealed, the suspension from membership shall be stayed until such time as the appeal has been finally disposed of by a court of last resort. Such suspension shall be completely nullified in the event the court reverses the member's conviction.

Chapter XVIII - Disciplinary Bodies/Proceedings and Appeals Section 9 - Other Suspensions of Membership -

A member shall be suspended from membership in this Society:
(a) on December 31 of any year if [he] *the member* is an active or associate member who has failed to qualify for the American Medical Association's Physician's Recognition Award provided the office of the executive vice president has given such member 60 days notice prior to December 31 that such suspension will be invoked unless such member shall submit sufficient supplemental records to fulfill such award requirements by December 31, and such suspension shall remain in force until such member submits

sufficient supplemental records to fulfill the award requirement;

(b) upon suspension of [his] membership in [his] *the member's* component society; and...

Chapter XVIII - Disciplinary Bodies/Proceedings and Appeals Section 11 - Termination of Membership -

The membership of a member of this Society shall terminate:...
(b) upon (i) termination of [his] membership in [his] *the member's* component society for any reason whatsoever, or (ii) failure to pay a delinquent assessment within 30 days after notice of such delinquency as provided in these bylaws, or (iii) three months after ceasing to be eligible for the class of membership in which [he] *such member* is a member as specified in these bylaws, unless at such time an application or certification for another class of membership for which the member will become immediately eligible is pending in the office of the executive vice president of this Society; and...

Chapter XVIII - Disciplinary Bodies/Proceedings and Appeals Section 12 - Reinstatement of Membership After Termination -

Any person whose membership has been terminated for failure to pay a delinquent assessment shall be reinstated to membership without any break in continuity of membership upon payment of the delinquent assessment in full before December 31 of the assessment year and reinstatement by [his] *the member's* component society. No such member under any circumstances shall be considered to be a member in good standing during the period between January 1 of the year for which assessment was delinquent and the date of reinstatement for the purposes of any section of these bylaws.

Any active dues-paying or associate member whose membership has been terminated for failing to meet the requirements for the American Medical Association's Physician's Recognition Award shall be reinstated to membership if, after meeting all the other requirements for reinstatement, [he] *such member* submits evidence [that he has met] of *meeting all the requirements for such award for a current period and [that] earning at least one-third of the*

required hours [were earned] during the previous 12 months....

Chapter XVIII - Disciplinary Bodies/Proceedings and Appeals Section 13 - Reinstatement of Membership After Automatic Suspension -

...Applications for reinstatement may be submitted not earlier than four months after the effective date of the suspension. Applications shall be in writing and shall set forth the reasons why the member [believes he is] *feels* entitled to reinstatement. They shall be filed with the county board of censors....

**Chapter XVIII - Disciplinary Bodies/Proceedings and Appeals
Section 14 - Expulsion of Unqualified Witness -** Any member of this Society who testifies as an expert witness without meeting the qualifications set forth in this section shall be subject to expulsion after a due process hearing as provided for in these bylaws. An expert witness must have basic educational and professional knowledge as a general foundation for [his] testimony, and in addition, have current personal experience and practical familiarity with the problems that are being considered and be actively engaged in the practice of the medical subject under discussion.

Chapter XIX - Special Sections Section 4 - Medical Staff Section -

Membership in this section shall consist of representatives of hospital medical staffs in Pennsylvania. Every hospital medical staff shall be entitled to one representative to this section provided that the representative establishes, to the satisfaction of the credentials committee, that [he] *the individual* was elected by the majority of the active physician voting members of the medical staff represented, that [he] *the individual* is a member of the Society, and that [he] *the individual* has clinical privileges granted by the medical staff represented....

**Chapter XIX - Special Sections
Section 6 - Interspecialty Section -**

...The section shall elect from among its members a chair and vice chair. When appropriate, the chair of the section or the chair's designee shall present to the Society's House of Delegates the names of one or more qualified nominees for election to the position of specialty trustee who shall be placed in nomination at the

The Health Plan That Won The West.

Now in Pennsylvania.

It started in Colorado. It spread to Washington, Oregon, Idaho, California and New Mexico. It's QualMed. A health plan with a profoundly simple, though often overlooked idea.

Well-Managed Care for our Providers.

QualMed is a physician founded and oriented HMO with one of the most effective medical management systems in the industry. Our unique Personal Medical ManagementSM system sets us apart by emphasizing **physician-to-physician interaction, fee-for-service payment without withholds, and prompt payment** for covered services.

Impressive Success Record.

We have an extremely high rate of satisfaction among our existing providers in six Western states. Our record of success is among the best in the West — 1.5 million people have entrusted their health care to us. We've worked hard to win their approval. And we'll work hard to win yours, too.

To learn more about QualMed, or to receive a physician application, call Provider Services at 1-800-597-8550.

QUALMEDSM

Well-managed care, right from the start.

Society's House of Delegates by the chair of the section or [his] *the chair's* designee.

SUBJECT TWO

QUALIFICATION OF JUDICIAL COUNCIL MEMBERS

The Committee on Bylaws proposes the following amendments to the section of the bylaws regarding Judicial Council members' qualifications.

Chapter XVII - The Judicial Council Section 3 - Qualifications of Members

...Members elected to the Judicial Council shall resign all other positions held by them in the Pennsylvania Medical Society upon their election to the council. No members, while serving on the Judicial Council, shall be a delegate or an alternate delegate to the House of Delegates, or a general officer of the Society, or serve on any other council or committee, *or on a subsidiary board, or as a delegate or alternate delegate to the American Medical Association.*

SUBJECT THREE

SLOTTED POSITIONS FOR MEMBERS OF THE COMMITTEE TO NOMINATE DELEGATES AND ALTERNATE DELEGATES TO THE AMERICAN MEDICAL ASSOCIATION

The following bylaws revisions are offered to clarify the selection process for the Committee to Nominate Delegates and Alternate Delegates to the AMA.

Chapter XV - Committees, Administrative Councils and Commissions

Section 2 - Standing Committees - ...d. Committee to Nominate Delegates and Alternates to the American Medical Association

The Committee to Nominate Delegates and Alternate Delegates to the House of Delegates of the American Medical Association shall consist of five members elected by the House of Delegates to serve a term of three years. *At least one qualified person shall be nominated for each expiring term.* The immediate past president and the Chair of the Board of Trustees shall serve as ex officio members of the Committee without the right to vote. This committee shall select its own chair annually immediately upon adjournment of the annual meeting of the House of Delegates....

SUBJECT FOUR

DEUNIFICATION

The Board of Trustees, at its March 8, 1995, meeting, directed the Committee on Bylaws to develop and publish in the Official Call, language to deunify from the AMA. The proposed language is set forth below.

Restated Articles of Incorporation...Article VII.

Membership in the Corporation shall be limited exclusively to persons who are members in good standing of a county medical society duly affiliated with the Corporation, and the failure on the part of any such member to keep himself or herself in good standing in such affiliated county medical society [and the AMA] shall be sufficient cause for expelling the member from the Corporation, either by automatic termination of membership or otherwise as the Bylaws of the Corporation shall provide. Nothing herein shall be construed to prevent the Corporation from electing honorary members, medical students, or special members from among persons who are not members in good standing of affiliated county medical societies.

Chapter I - Membership

Section 2 - Admission to Membership

To be a member of this Society a physician must be a member of a component society. The term, physician, means a person who has received formal and recognized training in the art and science of medicine and is qualified to acquire an unlimited license to practice medicine and surgery in the Commonwealth of Pennsylvania. Once elected to a category of membership other than honorary, in a component society, the member is required to become a member of this Society [and the American Medical Association] within three months by paying any appropriate assessment and having the component society certify to the executive vice president of this Society that the member possesses the qualifications for the category as described in these bylaws.

Chapter I - Membership

Section 3 - Membership Categories

a. **Active Member:**...Medical students enrolled in a medical school approved by this Society are eligible for active membership in this Society. Such

students are not required to be members of a component county medical society[, but must become members of the American Medical Association]. They shall make application directly to this Society. Such students are entitled to all rights and privileges of membership....

SUBJECT FIVE

NAME CHANGE AND ROLE EXPANSION OF HOSPITAL MEDICAL STAFF SECTION

The Board of Trustees, at its May 10, 1995, meeting, directed the Committee on Bylaws to develop and publish in the Official Call, language to change the name of the Hospital Medical Staff Section (HMSS) to the Organized Medical Staff Section (OMSS) and expand the section's representation to include organized medical staffs of other health facilities and emerging delivery systems, such as physician hospital organizations (PHOs), managed care organizations (MCOs), independent practice associations (IPAs), physician organizations (POs), staff model HMOs, and preferred provider organizations (PPOs). The proposed bylaws revisions are set forth below.

Chapter VIII - House of Delegates Section 3 - Composition and Apportionment

The House of Delegates shall be composed of voting delegates and ex officio persons without the right to vote.

a. Voting delegates shall be:...

4. Eight delegates from the medical student section, ten delegates from the resident physician section, four delegates from the young physicians section, and one delegate each from the medical school section and the [hospital] organized medical staff section....

Chapter X - Nominations

Section 1 - Origin of Nomination

...Nominations for the [hospital] organized medical staff trustee shall be made by the seated delegate from the [hospital] organized medical staff section....

Chapter XIV - The Board of Trustees

Section 3 - Composition

The Board of Trustees shall consist of the president, the president elect, the vice president, the immediate past president, the speaker of the House of Delegates, the vice speaker of the House of Delegates, one trustee who is an active or associate member in good standing of this Society from

each district, one trustee to represent the AMA Board certified specialties organized in Pennsylvania who is an active or associate member in good standing of this Society and a member of a specialty organized in Pennsylvania which is an AMA Board certified specialty, one trustee to represent resident physicians who is an active member in good standing of this Society and who, at the time of election, is a resident physician member of this Society, one trustee, without the right to vote, who is an active member in good standing of this Society and who, at the time of election, is a medical student member of this Society, one trustee to represent [hospital] *organized* medical staffs who is an active or associate member in good standing of this Society and who, at the time of election, is a member of an [hospital] *organized* medical staff in Pennsylvania, and one trustee to represent young physicians who is an active member in good standing of this Society and who, at the time of election, is a member of the Young Physicians Section.

Chapter XIV - The Board of Trustees
Section 5 - Nomination and Election of Trustees...Nominations for resident physician trustee, medical student trustee, [hospital] *organized* medical staff trustee, and young physicians trustee shall be made only by seated delegates from the resident physician, medical student, [hospital] *organized* medical staff, or young physicians section respectively. Election of all trustees by the House of Delegates is required.

Chapter XIX - Special Sections
Section 4 - Organized Medical Staff
Section - Membership in this section shall consist of [representatives of hospital] *physicians of* medical staffs in hospitals and other delivery systems in Pennsylvania. Every [hospital] *organized* medical staff shall be entitled to one representative to this section provided that the representative establishes, to the satisfaction of the credentials committee, that the individual was elected by the majority of the active physician voting members of the

medical staff represented, that the individual is a member of the Society, and that the individual has clinical privileges granted by the medical staff represented.

The section shall elect (a) a governing council consisting of a chair, vice chair, secretary, delegate, and alternate delegate to the Society's House of Delegates and two members-at-large, and (b) one or more qualified nominees for the position of [hospital] *organized* medical staff trustee who shall be placed in nomination at the Society's House of Delegates by the delegate of the section. The offices of governing council member and delegate or alternate may be held simultaneously by a single member of the section as may the offices of governing council member and medical staff trustee. The offices of trustee and delegate or alternate may not be held simultaneously. The regular functions of this section shall include, but not be limited to, the conducting of a business meeting in conjunction with the Society's House of Delegates meeting.

Get All the Medicare Part B Dollars You're Entitled to...

SUBJECT SIX

TERMS OF MEMBERS OF COMMITTEE ON BYLAWS

The members of the Committee on Bylaws also serve as the members of Reference Committee A. The Committee on Bylaws believes it is important that the members' terms expire at the conclusion of the annual meeting, as do the terms of members of all other standing committees, rather than immediately prior to the annual meeting, and proposes the following amendment.

Chapter XV - Committees, Administrative Councils And Commissions

Section 2 - Standing Committees - a. Committee on Bylaws - The Committee on Bylaws shall consist of (1) five voting members of the House of Delegates appointed by the speaker of the House of Delegates, who shall also designate the chair, and (2) the speaker and vice speaker of the House of Delegates, the secretary, legal counsel, and the executive vice president as ex officio members without the right to vote. Three members of this committee shall be appointed on odd-numbered years for two-year terms, and two members of this committee shall be appointed on even-numbered years for two-year terms. No member shall serve more than two consecutive two-year terms. [The term of a member of this committee shall begin with the opening session of the annual meeting of the House of Delegates following the appointment and shall conclude immediately prior to the third annual meeting thereafter.] This committee shall constantly study the bylaws and recommend revisions and modifications necessitated by changing times, methods or conditions. This committee shall serve as the reference committee of the House of Delegates as provided in these bylaws.

ARE YOU CONCERNED ABOUT . . .

- Interference in medical decisions?
- Loss of professional prestige and credibility?
- Looking over your shoulder for oncoming litigants?
- Getting entangled in "essential" reading material and regulation?
- Not having enough time to practice "real" medicine?
- Diminishing professional rewards?
- "Report cards" on practice style?

MEDICAL PRACTICE COMMUNICATOR, is the source of communication wisdom to enhance your skill as a writer, speaker, listener, reader, colleague, employer.

No matter what changes occur in the healthcare system . . . communication is vital. **MEDICAL PRACTICE COMMUNICATOR** will make that communication easier. It will save you hours of wasted time or unwanted legal attention due to ineffective communication. And saving you just an hour a week is worth more than 40 times the subscription cost of this readable and entertaining six times a year newsletter. And we know we'll save you at least that.

For a limited time your subscription is available at \$165 (US) for 6 issues. Send check to

AMA Resolution Deadline

The Resolution Committee of the Pennsylvania Delegation to the AMA has set October 2 as the deadline for receiving resolutions to be considered for submission to the AMA House of Delegates at the December 1995 Interim Meeting. Resolutions received after this date will be considered for the June 1996 Annual Meeting of the AMA House.

Send resolutions to: Arnold Cushner, Pennsylvania Medical Society, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820, or fax to: (717) 558-7840

Practical Approaches in Primary Care Medicine

September 12-16, 1995

Sheraton Hotel at Station Square
Pittsburgh, Pennsylvania

University of Pittsburgh
School of Medicine

Department of Medicine

Center for Continuing Education in the Health Sciences

Course Directors:

Wishwa N. Kapoor, MD

Terence W. Starz, MD

Edward J. Wing, MD

The program will address practical approaches in primary care medicine, including early diagnosis, implementation of preventive measures, cost-effective resource utilization, and outcome assessment. The general topic areas will include internal medicine, surgery, urology, dermatology, gynecology, neurology, and orthopaedics.

Contact Clarence J. Mason for more information.

Telephone: (412) 647-8261; Fax: (412) 647-8222

The Center for Continuing Education in the Health Sciences designates this continuing medical education activity for 33.5 credit hours in Category 1 of the Physician's Recognition Award of the American Medical Association.

Nurses and other health professionals are awarded 3.3 continuing education units (CEUs).

When Your Patients Refer to You for Cardiac Advice

Just as your patients trust you, more and more physicians trust Polyclinic Heart Institute.

Our reputation as a leader in cardiovascular care, plus years of experience, is why so many physicians refer their patients to our hospital.

From sophisticated procedures to state-of-the-art coronary services, we're right at the heart of innovative cardiac care.

Refer to Us for Care

Polyclinic Heart Institute

2601 North Third Street • Harrisburg, PA 17110
(717) 782-6670 • 1-800-334-1007

physicians and other professionals in
professional liability and business matters.

**Health-Care
Conference
on
Older Driver Issues**

November 9, 1995 • Harrisburg, Pennsylvania

A multidisciplinary conference designed to provide current information from national leaders and state resources regarding the medical, legal, social, and family issues surrounding older Pennsylvanians and the impact of driving on their safety and independence.

To receive a brochure:
phone (717) 531-6596
fax (717) 531-5604
e-mail JZB5@OAS.PSU.EDU

Various continuing education credits available.

Sponsored by Penn State's College of Medicine, the Geriatric Education Center of Pennsylvania, and the Pennsylvania AARP.

RESOLUTION DEADLINE FOR SOCIETY'S ANNUAL MEETING

Deadline for submission of resolutions for consideration by the 1995 Pennsylvania Medical Society House of Delegates is September 27, 1995. Late submissions require a two-thirds vote to become House business.

Any member of the Society may write a resolution. However, resolutions must be introduced by a delegate. For assistance, contact your county medical society's delegates to the House.

Send resolutions to: Kay Barrett, Pennsylvania Medical Society, P.O. Box 8820, Harrisburg, PA 17105-8820; or fax to: (717) 558-7840.

PHYSICIANS WANTED

Western Pennsylvania—Board certified or prepared emergency physicians needed for staffing a community hospital emergency department near the Ohio/Pennsylvania border. Please send CV to P.O. Box 91666, Cleveland, OH 44101.

Pennsylvania—Physician group practice seeks full-time and part-time physicians for an emergency department of community hospitals in central and western Pennsylvania. Please send resume to P.O. Box 91666, Cleveland, OH 44101.

Pittsburgh, Pennsylvania—Penn Group Medical Association (PGMA), a 100-physician multi-specialty group practice affiliated with the largest HMO in Pittsburgh, is seeking BE/BC physicians in: family practice, internal medicine, pediatrics, ob/gyn, and psychiatry. We are formally affiliated with major teaching hospitals and leading community hospitals in Pittsburgh. PGMA serves eight ambulatory care centers, all conveniently located near cultural, educational, recreational, and corporate activities. Excellent salary and fringe benefits. For confidential consideration contact: Angela Lascola, HealthAmerica, 5 Gateway Center, Pittsburgh, PA 15222, or call collect (412) 553-7502.

Emergency Physicians—Emergency Physician Associates is seeking quality ED physicians for a variety of practice opportunities. Director and staff positions are available. EPA contracts with hospitals in NJ, PA, MD, and NC for the provision of emergency medicine, urgent care and industrial/occupational health services. Our client hospitals are located in rural to urban areas with patient volumes ranging from 10,000 to 75,000. At EPA we offer physicians competitive compensation, flexible schedules and shifts, occurrence-based malpractice insurance, a variety of practice settings to choose from, cooperative working environments, and supportive medical directors and corporate staff. Interested candidates may contact EPA at (800) 848-EPA-1.

Part-time position available evening or weekends, modern urgent care center, N.E. Phila. Suburb. Excellent opportunity for resident or practitioner seeking to supplement income. Contact Dr. Miller (215) 638-0666.

Physician Executive

The Pennsylvania Department of Corrections is recruiting for a Physician who will be responsible for directing the management of professional health care delivery in a correctional setting. The position involves directing, managing, supervising, and overseeing the entire medical care and treatment provided to the Department of Corrections' inmate population. The successful candidate will also be responsible for the development and implementation of policies and procedures designed to maintain the quality of the medical services delivered.

Management, clinical, and public health experience is preferred. Necessary Special Requirement: Possession of a license to practice medicine in the Commonwealth of Pennsylvania, as issued by the State Board of Medical Education and Licensure, or the State Board of Osteopathic Examiners. Salary range: \$70,142-\$102,025 annually with fully paid benefits, and entitlement to a service and retention bonus under the Quality Assurance Program after one year of service.

If interested, submit a resume to:

Pennsylvania Department of Corrections
Bureau of Human Resources
Classification & Recruitment Section
P.O. Box 598
Camp Hill, PA 17001-0598
(717) 975-4901

The Department of Corrections is an equal opportunity employer.

Do you know someone who needs nursing care in their home?

*We have a special person to take care of
your special person.*

Are your patients entitled and/or eligible for Medicare benefits? If you are not sure call **MEDICAL PERSONNEL POOL** and we will help you get the answer. Bear in mind that a person need not be a Social Security recipient or over 65 to receive Medicare services. People who are disabled for 2 years or more are eligible as are people who are in dialysis for 6 months or longer. **MEDICAL PERSONNEL POOL** provides a full range of **HOME HEALTH SERVICES**, as well as private duty nursing. We provide most of these services in the home as well as in the hospital and nursing home.

Listings by County

MEDICAL SPECIALTY INFORMATION

The roster is coded with specialty information in the county society section. The abbreviation that appears to the right of the physician's name is the specialty code. *This specialty information was supplied from AMA records or by the physician personally and does not necessarily imply board certification in the specialty.* These codes and the specialties that they represent, along with the approximate number in each specialty, are as follows:

* Indicates membership in the Pennsylvania Medical Political Action Committee
